

To: The House Committee on Energy and Environmental Protection (EEP)  
From: Sherry Pollack, 350Hawaii.org  
Date: Thursday, April 10, 2025, 9am

**In strong support of SCR111**

Aloha Chair Lowen, Vice Chair Perruso, and members of the EEP committee,

I am Co-Founder of the Hawaii chapter of 350.org, the largest international organization dedicated to fighting climate change. 350Hawaii.org is in **strong support of SCR111** that declares a public health emergency relating to climate change and requesting statewide coordination to identify, plan for, and create cross-sector solutions to strengthen Hawaii's public health response to the climate crisis.

Public health is already being impacted by climate change through increased heat, vector-borne diseases, crop failure and food insecurity, water insecurity, waterborne diseases, extreme weather events, air pollution, and adverse mental health impacts. Because we have waited too long to mitigate CO<sub>2</sub> emissions, adverse health impacts will increase in future years. Moreover, our low and moderate-income residents, seniors, and indigenous residents will disproportionately experience these impacts.

Consequently, statewide efforts to actively examine how climate breakdown is impacting human health, and a collaboration of state agencies, local governments, and community organizations to develop a public health strategy to identify, plan for, and create cross-sector solutions to strengthen Hawaii's public health response to the climate crisis are critically needed. Please pass SCR111 along with measures that will boldly act to address the root issue creating this problem, our carbon pollution.

Mahalo for the opportunity to testify.

Sherry Pollack  
Co-Founder, 350Hawaii.org

**House Committee on Energy & Environmental Protection**

**Testimony on SCR111**

**Relating to a Climate Health Emergency**

**April 10th, 2025**

**9:00 AM**

**Room 325**

The Climate Change and Health Working Group (CCHWG) is a cross-sector collaborative interested in strengthening climate and health resiliency in Hawai'i. CCHWG supports this resolution, which urges the State to declare a public health emergency relating to climate change.

**Testimony of the Hawai'i Climate Change and Health Working Group**

**In Support of SCR 111**

**Relating to a Climate Health Emergency**

Aloha Chair Lowen, Vice Chair Perruso, and Members of the House Committee on Energy and Environmental Protection,

The Climate Change and Health Working Group (CCHWG) *strongly supports* SCR111/SR92, a resolution calling for a public health emergency in regards to climate change and calls for coordinated, cross-sector solutions to strengthen Hawai'i's response.

Climate change is not a distant issue: rising temperatures, extreme weather events, and ecological disruptions already threaten the physical and mental health of people across Hawai'i. From heat-related illnesses, threats of wildfires and respiratory issues tied to wildfire smoke, the degradation of water quality and risk of waterborne disease, impacts of more frequent and intense storm events, to the emotional toll of "eco-grief" as our natural and cultural resources

are damaged, climate change exacerbates existing health disparities and disproportionately impacts individuals with preexisting health conditions and communities that face the greatest socioeconomic, geographic, or infrastructural barriers to adaptation.

Declaring a public health emergency is more than a symbolic gesture – it is a crucial step in mobilizing resources and action to protect public health. This declaration directs focus and resources toward vulnerable populations – including keiki, kūpuna, and those living in areas with limited access to healthcare or reliable infrastructure. It also recognizes the broad scope of climate impacts, which transcend departmental boundaries and demand a unified, statewide approach. Aligning policies across agencies – from land and water management and urban planning to emergency services – will help ensure that climate change mitigation and adaptation efforts effectively safeguard the health and well-being of all Hawai'i residents.

The Legislature has previously recognized the seriousness of the climate crisis, but this resolution specifically highlights its public health implications, building on that foundation by urging every state agency to actively examine how their decisions affect human health. In doing so, Hawai'i can create robust, preventive strategies that reduce the incidence of climate-related health impacts, protect natural resources, and mitigate the social and economic costs of inaction.

Mahalo for the opportunity to testify in strong support of this measure. The climate crisis is a health crisis.

Sincerely,

The Climate Change & Health Working Group

RE: Support for SCR111, Declaring A Public Health Emergency Relating To  
Climate Change And Requesting Statewide Coordination To Identify, Plan  
For, And Create Cross-Sector Solutions To Strengthen Hawai'i's Public  
Health Response To The Climate Crisis

Hrg: Thursday, April 10, 2025, at 9:00 AM, Conference Room 325

---

Hawai'i Public Health Institute (HIPHI) is in **support of SCR 111**, which declares a public health emergency relating to climate change and calls for statewide cross-sector coordination to develop and implement solutions that bolster Hawai'i's public health resilience to the climate crisis.

### Climate Change is a Public Health Crisis

Climate change has moved beyond being just an environmental concern to become one of the greatest threats to human health worldwide. The Intergovernmental Panel on Climate Change (IPCC) and the World Health Organization (WHO) note that climate stressors—including extreme heat, rising sea levels, stronger storms, and vector-borne diseases—disproportionately affect vulnerable communities.<sup>1</sup>

As recognized by the legislature in 2023, climate change will intensify extreme weather events in Hawai'i, increase temperatures, threaten local agriculture and food security, and increase the risk of vector-borne and waterborne diseases [Figure 1].<sup>2</sup> Rising sea levels and heavy storms strain our outdated cesspools, degrading water quality, and placing our fragile reefs and coastlines at risk. Moreover, "eco-grief," the overwhelming emotional response to the destruction of our natural environment, can pose significant mental health challenges, especially across our islands where culture, livelihoods, and a sense of place are deeply tied to the land and ocean.<sup>3,4</sup>

With sea level rise and warmer oceans, Hawai'i is already witnessing coastal erosion and more extreme weather patterns, compromising critical public health

---

<sup>1</sup> <https://www.who.int/news-room/fact-sheets/detail/climate-change-and-health>

<sup>2</sup> [https://www.capitol.hawaii.gov/session/archives/measure\\_indiv\\_Archives.aspx?billtype=HCR&billnumber=192&year=2023](https://www.capitol.hawaii.gov/session/archives/measure_indiv_Archives.aspx?billtype=HCR&billnumber=192&year=2023)

<sup>3</sup> <https://pmc.ncbi.nlm.nih.gov/articles/PMC7830022>

<sup>4</sup> <https://www.frontiersin.org/journals/psychology/articles/10.3389/fpsyg.2022.872544/full>

infrastructure and housing. These impacts also reverberate economically, potentially increasing housing instability, mental health issues, and social inequities. Public health must therefore be at the forefront of any concerted climate action strategy. Declaring climate change to be a public health emergency creates a framework for decisive, coordinated action.

### **Cross-Sector Coordination is Essential**

Addressing climate-related public health risks cannot be left solely to the Department of Health. Because climate change influences factors well beyond the traditional scope of “health”, a cross-sector, inter-departmental approach is the only path to effectively strengthen our public health systems and infrastructure. Agencies overseeing land, water, agriculture, transportation, and emergency services may not typically see themselves as having a health-related mandate, yet their decisions on resource management, urban planning, and disaster preparedness directly shape community health outcomes.

By calling for every department to reflect on its role in mitigating and adapting to climate-health impacts, this resolution fosters a culture shift in which all agencies recognize how their policies and operations can either exacerbate or alleviate public health threats. This proclamation underscores the urgency for holistic action, ensuring that Hawai'i can implement comprehensive solutions to protect residents and develop more resilient infrastructure in the face of an escalating climate crisis.

### **Building on Hawai'i's History of Leadership**

Hawai'i set a precedent by becoming the first state to declare a climate emergency in 2021, underscoring our collective will to confront climate change.<sup>5</sup> However, that emergency declaration did not explicitly prioritize public health or mobilize necessary health-focused resources. This resolution builds on our established environmental commitments by explicitly addressing the human health dimension, ensuring that community well-being remains at the forefront of climate adaptation and resilience efforts.

By declaring a public health emergency and calling for broad statewide collaboration, SCR 111 affirms Hawai'i's commitment to safeguarding the health of its residents. This resolution is an important step in strengthening our state's capacity to identify, plan for, and implement the cross-sector actions needed to protect our communities from the growing threats posed by climate change.

We respectfully urge the committee to pass this measure and stand with Hawai'i's residents in protecting public health from the climate crisis.

Mahalo,

APRIL 10, 2025

### SCR 111, DECLARING A PUBLIC HEALTH EMERGENCY RELATING TO CLIMATE CHANGE AND REQUESTING STATEWIDE COORDINATION TO IDENTIFY, PLAN FOR, AND CREATE CROSS-SECTOR SOLUTIONS TO STRENGTHEN HAWAII'S PUBLIC HEALTH RESPONSE TO THE CLIMATE CRISIS

#### POSITION: SUPPORT

Coalition Earth **supports** SCR 111, which declares a public health emergency relating to climate change and requests statewide coordination to identify, plan for, and create cross-sector solutions to strengthen Hawai'i's public health response to the climate crisis.

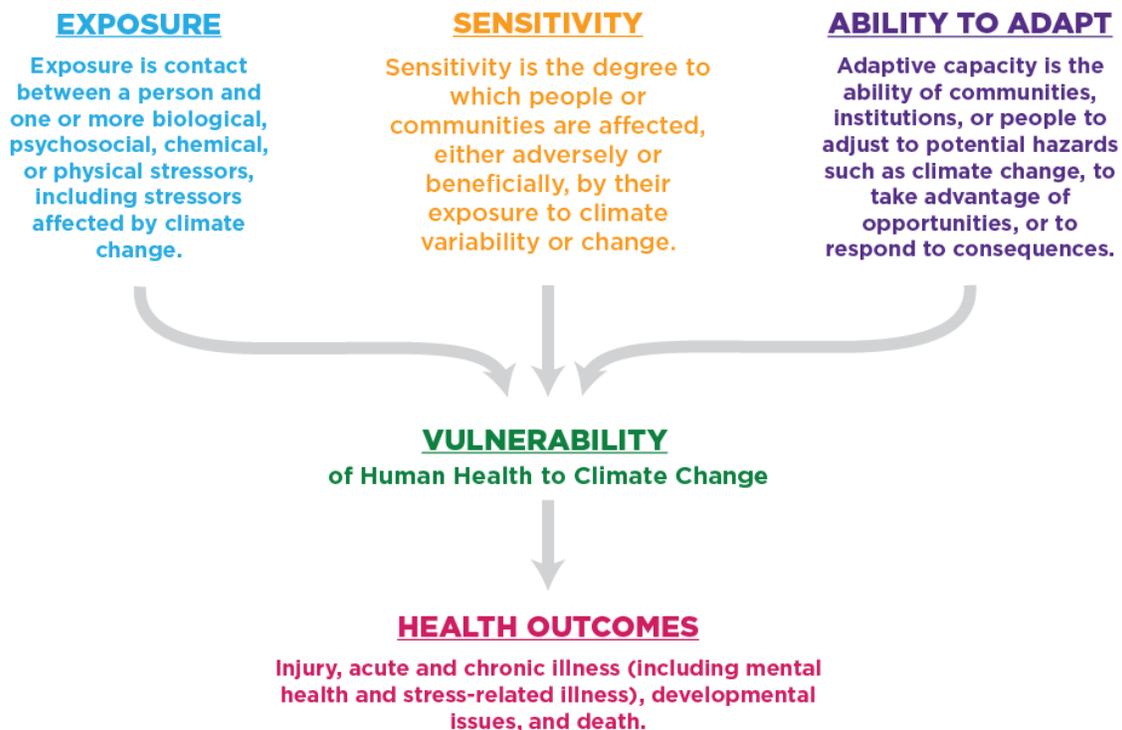

According to a report produced by the Hawai'i Climate Change Mitigation and Adaptation Commission, global sea levels could rise more than three feet by 2100, with more recent projections showing this occurring as early as 2060. In turn, over the next 30 to 70 years, approximately 6,500 structures and 19,800 people statewide will be exposed to chronic flooding. Additionally, an estimated \$19 billion in economic loss would result from chronic flooding of land and structures located in exposure areas. Finally, approximately 38 miles of coastal roads and 550 cultural sites would be chronically flooded, on top of the 13 miles of beaches that have already been lost on Kaua'i, O'ahu, and Maui to erosion fronting shoreline armoring.

As we work to reduce carbon emissions and stave off the worst consequences of climate change, we must begin preparing for the adverse impact of sea level rise on our shores. We are now quantifying the speed at which we must act. We cannot continue to develop the 25,800-acre statewide sea level rise exposure area—one-third of which is designated for urban use—without risking massive structural damage and, potentially, great loss of life.

Just two years ago, we witnessed the impact of the climate emergency on our shores. On August 8, 2023, wildfires swept across Maui and killed at least 100 people, making it one of the nation's deadliest natural disasters. The spread of the fires has been attributed to climate change conditions, such as unusually dry landscapes and the confluence of a strong high-pressure system

to the north and Hurricane Dora to the south. The wildfires destroyed over 2,200 structures, including numerous residential buildings, historic landmarks, and school facilities. In September 2023, a report from the United States Department of Commerce estimated the total economic damage of the wildfires to be roughly \$5.5 billion. Investing in renewable energy generation could not be more urgent, given the growing threat of climate catastrophes to our island home.

Therefore, **our state should take steps to hasten our transition to a clean energy economy and continue our fight against climate change, including by connecting the climate crisis to public health outcomes.** According to the U.S. Environmental Protection Agency, climate change can exacerbate existing health threats and create new public health challenges. It affects the physical environment, as well as all aspects of natural and human systems, including social and economic conditions and the functioning of health systems.

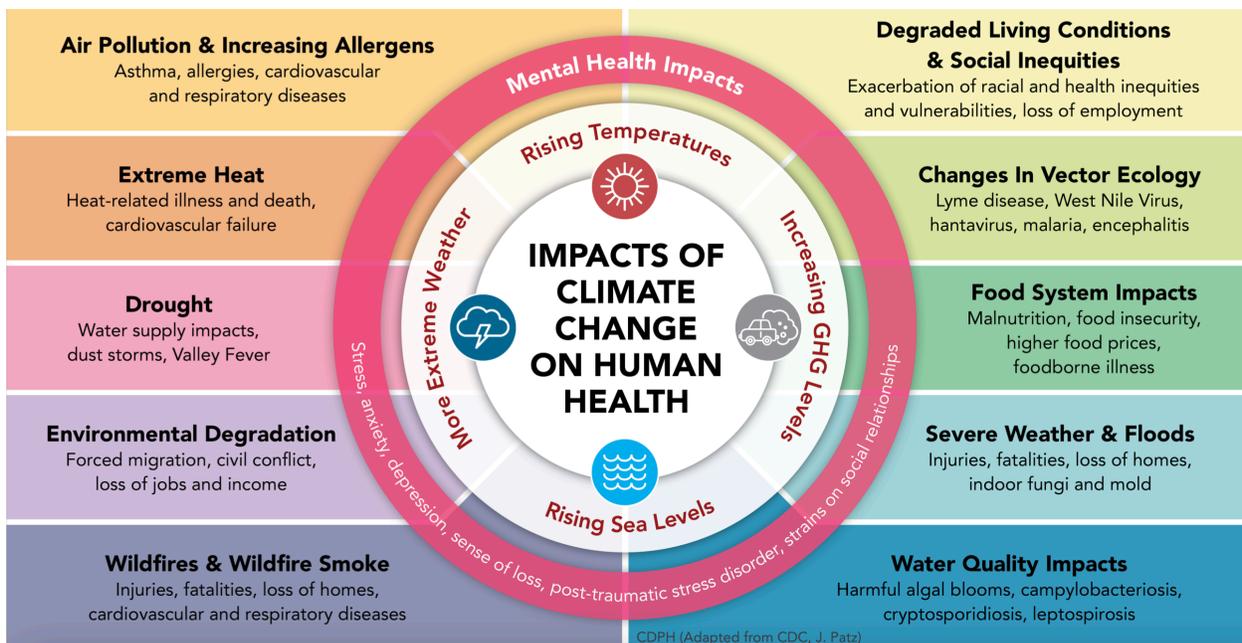

*Figure adapted by the EPA from the Global Change Research Program’s 2016 Climate and Health Assessment, illustrating determinants of vulnerability to climate-related health threats.*

The World Health Organization calls climate change a “threat multiplier,” that undermines decades of health progress. In a fact sheet published by the WHO on October 12, 2023, the organization stated:

As climatic conditions change, more frequent and intensifying weather and climate events are observed, including storms, extreme heat, floods, droughts and wildfires. These weather and climate hazards affect health both directly and indirectly, increasing the risk

of deaths, noncommunicable diseases, the emergence and spread of infectious diseases, and health emergencies.

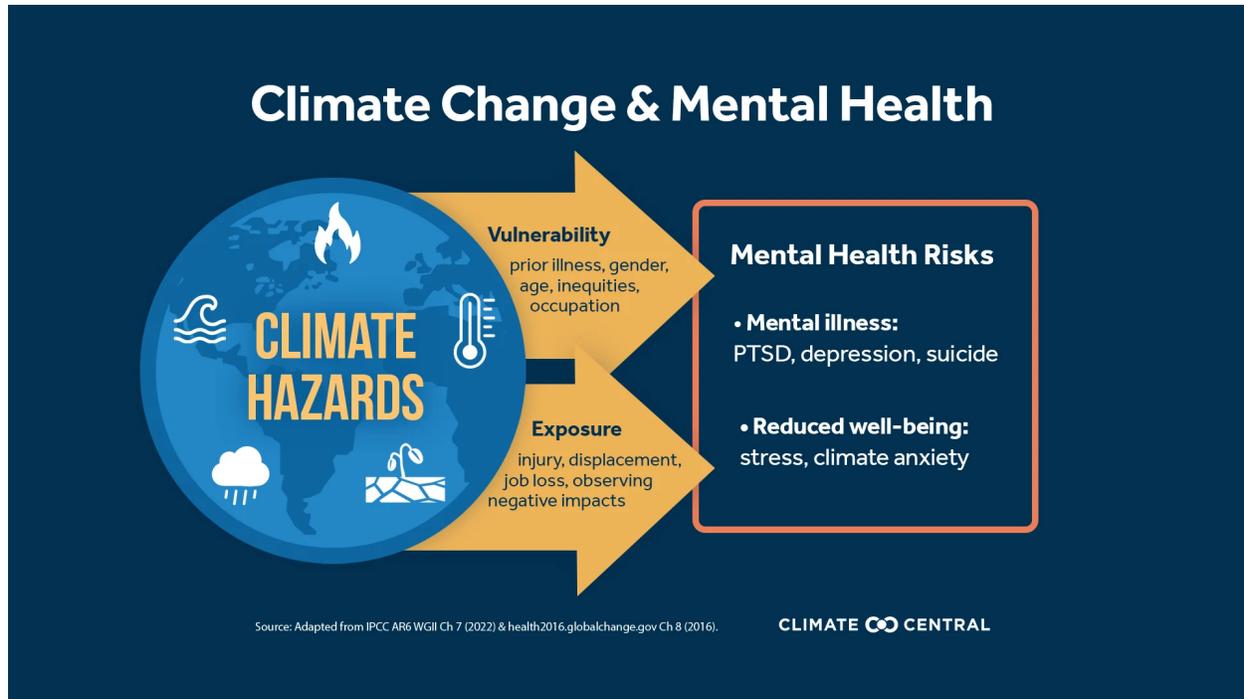

The Centers for Disease Control and Prevention has developed the following graphic to highlight the way climate change harms human health through changes in environmental exposures, including more extreme heat and severe weather events, worsened air quality, more frequent wildfires and smoke, increases in allergens, altered environmental conditions that foster the spread of infectious diseases, and other direct and indirect pathways. The resulting human health impacts include increased cases of heat-related illness and death, more air pollution-related cardiovascular and respiratory disease events, increased injury and loss of life due to wildfires, severe storms, and flooding, further occurrences of vector-borne and water-borne illnesses, and mental trauma from loss of livelihoods, property loss, and displacement.

Moreover, populations that already face systemic and economic disadvantages—such as individuals experiencing homelessness, infants and the elderly, pregnant persons, people who manage chronic illnesses, non-able-bodied populations, members of the LGBTQ+ community, and immigrants—are more likely to be adversely impacted by the complex and overlapping consequences of the accelerating climate crisis.

Finally, as the Commonwealth Fund has noted, climate change significantly impacts mental health. In an article entitled “How Climate Change Affects Our Mental Health, and What We Can Do About It,” published on March 29, 2023, the Commonwealth Fund asserted that rising ambient temperatures have already been found to increase rates of mental health-related emergency department visits and that violent incidents and suicide attempts also climb as temperatures rise. Similarly, long-term exposure to air pollution has been associated with elevated anxiety levels and even an increase in suicide rates. Climate change also can raise

stress and anxiety levels for people robbed of their economic livelihoods, as when farmers can no longer grow their crops because of shifting weather patterns that cause frequent drought or flooding. Extreme weather events can also destroy businesses, severely hamper economic activity, and lead to both short- and long-term financial challenges.

*Graphic taken from Climate Central, showing the impact of climate change on mental health.*

The Intergovernmental Panel on Climate Change distinguishes between climate change-related mental health risks that are:

- **Direct:** such as anxiety, depression or PTSD stemming from personal traumas (injury, displacement, or loss of loved ones) sustained during a hurricane;
- **Indirect:** such as stress, substance abuse, or suicidal ideation among individuals whose livelihoods or food security are affected by drought; and
- **Vicarious:** such as anxiety, fear and distress that can affect people when they learn about or perceive climate change risks or witness its harmful impacts on others.

Accordingly, we must recognize the climate crisis as a public health emergency and launch a coordinated response that protects vulnerable communities from its most menacing impacts on our state's health and wellness.

*Coalition Earth is a nongovernmental organization that works to preserve the well-being of people and our planet. We champion policies that advance climate resilience, clean energy, public health, and economic fairness for working families. **Contact us at [info@coalitionearth.org](mailto:info@coalitionearth.org).***

# Environmental Caucus of The Democratic Party of Hawai'i

---

April 9, 2025

**Testimony in Support of SCR111 DECLARING A PUBLIC HEALTH EMERGENCY RELATING TO CLIMATE CHANGE AND REQUESTING STATEWIDE COORDINATION TO IDENTIFY, PLAN FOR, AND CREATE CROSS-SECTOR SOLUTIONS TO STRENGTHEN HAWAI'I'S PUBLIC HEALTH RESPONSE TO THE CLIMATE CRISIS**

**TO:** Chair Nicole E. Lowen, Vice Chair Amy A. Perruso, and Members of the Committee on Energy & Environmental Protection

**DATE:** Thursday, April 10, 2025, **TIME:** 9:00 a.m. **PLACE:** Conference Room 325 & Via Videoconference

**FROM:** Environmental Caucus of the Democratic Party of Hawai'i

**Aloha** Chair Lowen, Vice Chair Perruso, and Members of the Committee,

The Environmental Caucus of the Democratic Party of Hawai'i strongly supports SCR111, which declares a public health emergency relating to climate change and requests statewide coordination to address its impacts. The escalating climate crisis poses unprecedented risks to public health, safety, and well-being in Hawai'i. Immediate and concerted action is essential to safeguard the lives and livelihoods of our residents.

Key reasons for supporting SCR111 include:

- **Health Impacts of Climate Change:** Rising temperatures, extreme weather events, and sea-level rise exacerbate health challenges such as heat-related illnesses, vector-borne diseases, and respiratory conditions linked to poor air quality.
- **Vulnerability of Hawai'i's Communities:** Coastal and rural communities face disproportionate risks, including displacement, reduced access to healthcare, and loss of critical infrastructure due to climate-related disasters.
- **Urgent Need for Coordination:** A coordinated, cross-sector approach ensures that public health responses are aligned with climate adaptation and resilience measures across state agencies and community stakeholders.

- **Proactive Solutions:** Declaring a public health emergency provides a framework for identifying threats, allocating resources, and implementing policies that address both immediate and long-term public health challenges.
- **Protection of Future Generations:** By strengthening Hawai‘i’s public health response to climate change, we are safeguarding the well-being of future generations and preserving the state’s unique environmental and cultural heritage.

We commend this resolution for prioritizing public health and taking a proactive stance in addressing the climate crisis. We urge the Committee to pass SCR111 and advance measures that ensure a healthier, more resilient future for Hawai‘i.

**Mahalo nui loa** for the opportunity to provide testimony.

Melodie Aduja and Alan Burdick

Comments:

I oppose SCR111. Chanara Richmond HD42

Aloha Chair, Vice Chair and Members of the Committee.

My name is Dr. Elizabeth Kiefer, physician and JABSOM faculty. **I am writing in strong support of SCR 111/SR 92.**

I'd like to address concerns from a previous hearing, namely that climate change is not a real health emergency.

An emergency demands immediate action to prevent harm. Harm prevention organizations like the American Academy of Pediatrics, the American Lung Association, and the American Public Health Association among many others, have already called climate change a health emergency.

There was concern that this bill “waters down the urgency of actual public health emergency threats” like the fentanyl crisis, untreated mental illness, rising crime, crumbling infrastructure, and affordable housing.

Climate change is a threat multiplier: it does not dilute, it amplifies. Emergencies get worse with heat waves, floods and fires. In the US, as the temperature increases, we see worsening mental illness and drug overdoses. We even see an increase in crime and violence in a heat wave.

Health emergencies like strokes, heart attacks, trauma get worse from natural disasters because of pre-existing poor infrastructure. Emergencies like the housing crisis get worse with a fire, as we have seen on Maui.

This is non-monetary legislation. However, it does have an ask: that departments look inward and coordinate to identify and plan for solutions to strengthen the health response to this emergency. It doesn't dilute, it focuses. The idea that we have to do one and not the other is a false dichotomy.

Elizabeth Kiefer, MD MPH

Opposition to Hawaii Senate Concurrent Resolution 111 (2025)

April 8, 2025

To the Members of the Hawaii State Legislature:

I urge you to **reject SCR 111** in its current form and adopt amendments that prioritize science-based solutions to Hawaii’s environmental challenges. Below, I consolidate evidence and demands from all prior correspondence, with citations to supporting studies and legislative precedents:

**1. SCR 111 Relies on Flawed Climate Science**

- **CO<sub>2</sub> Is Not a Pollutant**: It is essential for photosynthesis and agriculture. Current levels (~410 ppm) remain within historical ranges that supported thriving ecosystems.
- **Natural Climate Drivers**: Volcanic activity, solar cycles, and oceanic oscillations drive climate shifts. NOAA’s exclusion of these factors skews policy.
- **Action**: Revise SCR 111 to reflect balanced science acknowledging CO<sub>2</sub>’s benefits and natural variability.

**2. Ban Geoengineering to Protect Hawaii**

- **Risks**: Solar radiation modification and aerosol dispersion threaten ecosystems and public health.
- **Precedent**: Tennessee (2023) and **Florida’s SB 56** (2025) banned geoengineering due to lack of transparency and oversight. Violators face fines up to \$100,000 and imprisonment.
- **Action**: Adopt language mirroring **Florida’s HB 2056** (Arizona) to prohibit unauthorized geoengineering and empower citizens to report violations.

**3. Hold the DOD Accountable for Pollution**

- **Red Hill Crisis**: 73,350 liters of jet fuel leaked in 2021, contaminating water and sickening thousands. PFAS “forever chemicals” from AFFF spills persist.

- **DOD Failures**: A 2024 Inspector General report confirmed substandard infrastructure and delayed cleanup.

- **Actions**:

1. **Mandate Transparency**: Release all PFAS data and cleanup plans.

2. **Impose Deadlines**: Accelerate remediation with penalties for noncompliance.

3. **Revoke CERCLA Exemptions**: Block new military projects until legacy pollution is resolved.

**4. Adopt Dry Sewage Processing to Save Money and Ecosystems**

- **Cesspool Crisis**: 88,000 cesspools release 53 million gallons of untreated sewage daily, contaminating groundwater and coral reefs<sup>[3][9]</sup>.

- **Dry Processing Benefits**:

- **Sludge Drying Beds**: Reduce waste volume by 50–80%, cut landfill costs, and create fertilizer (e.g., Honolulu’s Synagro facility)<sup>[7]</sup>.

- **Zero Liquid Discharge (ZLD)**: Prevent groundwater contamination via solar/biofuel-powered evaporation<sup>[5]</sup>.

- **Cost Savings**: Dry sludge cuts hauling costs by 60–90% and reduces energy use<sup>[7]</sup>.

- **Global Success**:

- **UN’s Global Wastewater Initiative (GW2I)**: Promotes dry sanitation to improve water quality and public health, aligning with SDG 6<sup>[1][5][9]</sup>.

- **India’s “Swachh Bharat”**: Large-scale dry toilet deployment reduced waterborne diseases and created fertilizer markets<sup>[5]</sup>.

- **Action**: Mandate cesspool upgrades to dry/composting systems and expand ZLD infrastructure (e.g., Sand Island Phase 2).

**5. Legal and Economic Safeguards**

- **Avoid Overreach**: SCR 111 risks replicating unconstitutional mandates seen in *Sunoco v. Honolulu*.

- **Protect Key Sectors**: Prioritize policies that safeguard agriculture, energy, and tourism from speculative climate mandates.

**Conclusion**

SCR 111 must be revised to:

1. **Ban geoengineering** (modeled on Florida SB 56 and Arizona HB 2056).
2. **Force DOD cleanup of military pollution**.
3. **Transition to dry sewage processing** using UN-backed methods<sup>[1][5][9]</sup>.
4. **Base climate policy on balanced science**, not biased agency narratives.

Sincerely,

Deborah Umiamaka

Nearly 2k credentialed scientists from around the world have signed a declaration stating there is no climate emergency <https://clintel.org/wp-content/uploads/2025/03/WCD-250312.pdf>  
You are basing this bill on manipulated, false science. There is no Global Warming!

You CANNOT create a bill that will take away freedoms and create more rules, fines, and regulations based on a FALSE premise. That is 100% government overreach!  
Not only that but the government is NOT responsible for people's health!  
Again, government overreach! Personal health is personal responsibility!

According to Hawaii Revised Statutes Title 37, 710 it is a felony to create a government document that is false. You are required to oppose this bill!

ALOHA

This bill is beyond overreach of government.

First, there is much evidence that the world is cooling, not warming. A report by the National Library of Medicine on Aug 4, 2020 says the earth is cooling.

<https://pmc.ncbi.nlm.nih.gov/articles/PMC7575229/>

50-year US Navy Meteorologist, Dr. David Dilley stated that the Melekovitch Cycle shows the earth was closer to the sun 8K years ago and is cooling! [https://youtu.be/sa-tlITPnM?si=wjq\\_7Jw0bcEA1cKN](https://youtu.be/sa-tlITPnM?si=wjq_7Jw0bcEA1cKN)

Second, nearly 2k credentialed scientists from around the world have signed a declaration stating there is no climate emergency <https://clintel.org/wp-content/uploads/2025/03/WCD-250312.pdf>

You CANNOT create a bill that will take away freedoms and create more rules, fines, and regulations based on a FALSE premise.

This is 100% government overreach!

Additionally, the government is NOT responsible for people's health! Again, this is government over-reach!

Finally, according to Hawaii Revised Statutes Title 37, 710, it is a felony to create a government document that is false. You are required to oppose this bill!

Comments:

There is NO public emergency regarding "climate change." This is a contrived emergency to instill fear into the hearts of the populace. Any weather modification that is currently happening is done by our own government. Agencies that are involved with weather modification in our country need to stop the constant spraying of harmful chemicals from airplanes. I have traveled to many different parts of the U.S. and these "chem-trails" are everywhere--being sprayed upon the American people. It is documented, for example in USC Title 50 subsection 1520 & 1521 it describes some of the things they are spraying. They have been doing this for years. Some of the metals discovered in these chem-trails droppings are aluminum, mercury, & cadmium, which are all very toxic. If any bill is introduced, it should be to stop the spraying of chem-trails in Hawaii. Some other states are starting to pass those kinds of bills.

RE: SCR111

Aloha,

I am in strong support of this Bill.

"Climate health" is on our public policy agenda, again! Rising temperatures, extreme weather, and rising sea levels threaten everything from our food and water security to mental health and economic stability. I think that by formally recognizing climate change as a public health emergency, Hawai'i can better mobilize resources to protect vulnerable communities.

Mahalo nui,

John A. H. Tomoso+, MSW, ACSW

Comments:

Honorable legislators of the State Of Hawaii I absolutely oppose SCR111.

I affirm that your clerks can follow up on some of these scientists who have educated against the narrative of the politicians and central bankers that push this agenda.

A real impetus for this issue occurred in 2005 when the two Rockefeller brothers got together and made this issue not just an environmental one, but an issue that covered every aspect of our lives. They schemed to make it one that cut across all religious ideologies, class distinctions, and nationalities, and the globalists have been pushing it ever since.

Recognize the statements from the intellectual that spoke at Leaders' Pact for the Future: A Global Coup d'Etat – A Presentation by Jacob Nordangård the Swedish author of “Digital World Brain” which really describes the coup in global governance.

Another brilliant exposé of the lies has come from Hadi Dowlatabadi, who is Canadian research chair and professor in Applied Mathematics and Global Change at the University of British Columbia and Richard Lindzen, a professor of Meteorology at the Massachusetts Institute of Technology. They agree the scientific evidence makes it clear this issue is not isolated to carbon in our atmosphere. The gathering of information prior to 1850 has really been compromised and oversimplified as some of this data shows that there was as much as 10° change in the area of the north Atlantic information gathering from you know captured ice and tree rings in a mere decade! So the hype that has been put on the public is just like many scientific experiments I have studied the errors in. The designer of the scientific test creates the experiment (or the test) in order to verify what they want as an outcome. This has definitely happened to the detriment of honest reporting in the scientific field to confirm what the Rockefellers want you to know and the media has spun. So the governor, settling up this false premise as part of our State edicts,wants you to fear with a frenzy fear frenzy, and from what I have observed benefit by the money pit, capturing all those people’s fears in companies that were set up to do the profit-taking.

Astrophysicist and climate scientist Dr. William Soon gave this presentation titled "The Sun Also Warms" at the Friends of Science event. Dr. Soon probed the long history in the quest to understand Sun-climate connections for over 30 years. His research presents clear evidence of a strong urban heat island effect that contaminates the government temperature data sets. Instead, he used a rural temperature data set, and shows strong correlations between the sun's energy and earth's temperatures. The sun's irradiance varies much more than sunspots.

I affirm you will look into these names and the more objective facts presented in the global dialogue to free us from one more bogeyman that doesn't exist . Look at how much money has been removed from the needy in our communities throughout our once aloha state; the homeless, the foster children programs, the school lunch, and Headstart programs & the aid to disabled.

Let's stop the heartless activities and get down to helping our people who are suffering tremendously!

I appreciate your level-head and open heartedness in this matter before you ,

April Lee

This bill is such nonsense I cannot even believe it is proposed. What is wrong with you people? Are you bought off? Threatened or controlled? STOP trying to take away our freedom with these idiotic ideas, one after another, behind our backs. We are SICK and TIRED of all this BS! We didn't elect you to ruin our lives and that's all you do. Name ONE good thing you've ever done for the PEOPLE. Fix some real issues like housing and get all these homeless people off the street!!! Mental health facilities etc. I'm so angry with all the garbage you people are trying to cram down our throats. There is NO climate EMERGENCY and it is a felony to put this in a bill. You all should step down. Shame on anyone backing this pure crap.

Aloha Chair Lowen, Vice Chair Perruso, and members of the Committee on Energy and Environmental Protection:

Please support SCR111 declaring climate change a public health emergency and urging coordination across state agencies. I am a healthcare provider and received my Masters in Public Health. This resolution helps ensure our most vulnerable residents are protected as climate change is harming our public health through extreme heat, vector-borne diseases, food and water insecurity and mental health stress, to name a few. Climate change is happening now and we need to scale up existing public health systems to better respond to climate impacts, safeguard critical resources, and build resilient communities.

Again, please support this resolution to ensure Hawai'i strengthens our public health systems and fosters the cross-sector collaboration necessary to address the climate and health crisis. Our kūpuna are concerned not only about their own health, but the health impacts of climate change on our keiki and future generations. We must fundamentally change our politics and priorities to put the health of our communities and 'āina first.

Shelly Ogata, RN, MPH

Comments:

Aloha,

SCR 111 is based on a false narrative and should NOT be passed. First and foremost it is **government overreach** based on poor scientific evidence that climate change from greenhouse gases is causing a health emergency. CO2 is a very important element for our planet thru photosynthesis to produce oxygen. Climate is mostly driven by solar activity, cycles, and space weather.

Our Federal Government has been preparing for space weather threats for many years, yet the Hawai'i is not openly discussing the need to harden critical infrastructure (energy, communications, transportation, and supply chain) are at risk due to increased solar radiation from our weakening magnetosphere. In 2015 the magnetosphere was down by 40% according to this Federal Doc.

<https://apps.dtic.mil/sti/citations/AD1040918#:~:text=The%20research%20evaluates%20the%20impacts,reversals%20and%20adverse%20space%20weather>

In October of 2016 President Obama issued the following executive order Coordinating Efforts To Prepare the Nation for Space Weather Events - Executive order 13744

<https://www.govinfo.gov/app/details/DCPD-201600692>

10 days before the above executive order was signed, the Russian Government hosted a training event of 40 million civilians, 200,000 emergency rescuers and 50,000 units of equipment from October 4 to October 7, 2016. It took 3 days to do a mock evacuation of 40 million civilians into 5000 bunkers. This was a massive exercise carried out for the first time in modern history. A spokesman said in a statement: "The main goal of the drill is to practice organization of management during civil defense events and emergency and fire management, to check preparedness of management bodies and forces of civil defense on all levels to respond to natural and man-made disasters and to take civil defense measures." <https://www.express.co.uk/news/world/717446/russia-evacuate-40-million-people-emergency-drill-vladimir-putin-ww3>

Emergency resolutions, mandates and proclamations have been largely influenced by **foreign** entities such as the World Health Organization and United Nations. All of these organizations are acting on behalf of a small group of stakeholders with the intent of controlling the population and consolidating more wealth. **Every official should read this document to recognize how**

**UN Agenda 21 is being implemented.** <https://nwri.org/wp-content/uploads/2011/07/How-Public-Officials-can-Recognize-Agenda-21.pdf>

**Government intervention on health has caused more problems.** The response of the Hawai'i government during covid has proven it does not act in the best interest of the people when it comes to health. Officials pushed a medical intervention/vaccine that was an experiment that was not safe or effective. I personally know several people that died after the covid injection and it didn't offer protection, yet no one has been held accountable.

Man made geoengineering and stratospheric aerosol injection is an operation primarily used to block out solar radiation and create, distribute, and deflect weather systems. Its use over many decades is outside the scope of public knowledge and having significant impacts on our health/environment/weather to include increased super storms, fires, flooding, droughts, and causing very high levels of aluminum and other toxic metals in the soil and tissue samples of all life. I personally have tested hundreds of humans and animals and seen very high levels of aluminum in all hair analysis tests. This is why Monsanto developed aluminum resistant seeds, soil in North America is testing 40,000 times higher rates of aluminum in the last 2 decades. <https://www.geoengineeringwatch.org/links-to-geoengineering-patents/>

Tennessee, Texas, Iowa and New Hampshire have recently introduced bills to ban this practice. <https://www.tennessean.com/story/news/local/2024/03/20/tennessee-senate-passes-bill-banning-chemtrails-what-to-know/73027586007/>

If Hawai'i is serious about public health we **MUST** ban geoengineering, educate and prepare people for whats really going on. As the earths magnetosphere continues to weaken, solar radiation will be a significant health threat which is why governments and billionaires are building bunkers. Irrelevant resolutions and bills using false narratives are further degrading trust in government. Furthermore, **this resolution among others is not enforceable** and the population is largely becoming more aware of this.

Mahalo for your service,

Donna Thompson

Comments:

Vote No on SCR111:

The climate change caused by greenhouse gases narrative is just an idea, it cannot even be scientifically considered a hypothesis, with isolated dependent and independent variables that are compared with a controlled experiment without the independent variables. As this bill states “scientific consensus”, laws of nature are not arrived at through “consensus” but through rigorous experimentation that leads to repeatable and verifiable outcomes, not “consensus”. The climate catastrophy proponents can only point to “models” models are just mathematical constructs that attempt to predict something. The climate change model cannot even predict past weather accurately. To base any form of governmental policy based on scientific consensus is the height of the misuse of the term science. Obviously there are scientists on both sides of this idea, I propose instead, convening a state-sponsored conference inviting equal numbers of scientists from both sides of the issue and to present their findings to the people of Hawaii. The conference discussion must be expanded to include the role in climate change by the ongoing weather modification efforts being carried out on a large scale by unknown actors. We all can see with our own eyes these strange clouds in our skies. What are these caused by? There is a growing library of evidence of “stratospheric aerosol injections” of toxic nanoparticles being sprayed into our atmosphere. I have provided information about this to the Hawaii County Civil Defense office. You should familiarize yourself with these facts at [GeoengineeringWatch.org](http://GeoengineeringWatch.org) and watch the documentary “The Dimming”. Geoengineering has been ongoing since WW2 and we cannot have a discussion on climate anything without including this.

Sincerely, Ken Honma Kurtistown Hi, 96760

Comments:

I'm opposing this bill because it doesn't make sense and would cause harm to Hawai'i if passed;

The fact that there has always been climate change throughout this planet's history suggests bigger factors than human activity are at play.

As long as the blame is being put on humans, however, I see weather modification and chemtrails as a much bigger problem than cars. Further, the densification of wireless infrastructure can lead to higher temperatures as well as to serious health issues.

It's contradictory that consumers are asked to save electricity while electric cars and 5G, which is an energy hog, are being pushed. Smart cities would be counterproductive.

There is no public-health emergency relating to climate change. There is a public-health emergency relating to wireless infrastructure. People who are electro-hypersensitive are suffering. Many of them don't even know the cause of their conditions.

Without carbon dioxide life on earth would end.

Mahalo!

Comments:

This bill represents blatant government overreach. First, substantial evidence indicates that the planet is cooling—not warming. A report from the National Library of Medicine dated August 4, 2020, confirms global cooling: <https://pmc.ncbi.nlm.nih.gov/articles/PMC7575229/>.

Additionally, Dr. David Dilley, a former U.S. Navy meteorologist with 50 years of experience, cites the Milankovitch Cycle, showing Earth was closer to the sun 8,000 years ago and is now undergoing a cooling trend: [https://youtu.be/sa-tlITPnM?si=wjq\\_7Jw0bcEA1cKN](https://youtu.be/sa-tlITPnM?si=wjq_7Jw0bcEA1cKN).

Second, nearly 2,000 credentialed scientists worldwide have signed a declaration asserting that there is no climate emergency: <https://clintel.org/wp-content/uploads/2025/03/WCD-250312.pdf>.

You cannot pass legislation that strips away freedoms and imposes new rules, fines, and regulations based on a false premise. That is pure and undeniable government overreach. Furthermore, it is not the government's role or responsibility to manage individual health—again, a clear case of overreach.

Finally, per Hawaii Revised Statutes Title 37, Section 710, it is a felony to knowingly produce a false government document. You are legally and ethically obligated to oppose this bill.

Thank You

Michael Kolivosky.

Kate Kennedy	Individual	Oppose	Written Testimony Only

Comments:

I am asking that SCR111 not go forward as it is foundationally inaccurate.

Climate change is a constant and natural process; however it is being conflated with weather modification. Weather modification/manipulation is an unnatural process that has been used to create and/or exacerbate massively destructive storms, weather patterns and fire events. HARRP, DARRPA, Geoengineering and weather modification would be the rightful focus of an emergency declaration and should be well understood by any legislative body voicing concern about climate stressors, weather events and ‘collective eco-grief.’ There are voluminous amounts of information available regarding how these destructive patterns are created as well as the hundreds of patents granted for methods weather modification. Notably, New Hampshire and Tennessee have recently enacted bans against geo-engineering, the aerosolized spraying commonly referred to as chemtrails.

Resolution SCR 111 also reflects intent to ‘transition to a decarbonized economy’ – basically creating an inaccurate portrayal of an element as vital as oxygen. Carbon comprises only .04% (.004) of the atmosphere yet is an absolute necessity for the maintenance of all life. Plants and animals actually grow larger when exposed to higher levels of carbon. The resolution notes emergent conditions stemming from increased carbon but fails to provide any testing or proof of this. Similar ‘environmental issues’ were identified in the 1970’s (all oil would be gone in 10 years), 1980’s (acid rain would destroy crops in 10 years), 1990’s (Ozone layer will be gone in 10 years), 2000’s (Ice caps would melt and coasts would be submerged in 10 years). None were accurate yet all resulted in higher taxes, higher prices and increased regulation. More recently global warming terminology was adjusted to climate change secondary to the onset of a grand solar minimum cycle.

The resolution promotes the reduction of the .04% of our atmosphere that is carbon, via ‘investments in beneficial projects and infrastructure.’ As this is synonymous with electric vehicles and charging stations, the related issues of lithium mining, fire risk, and electrical grid limitations are largely inconsistent with the public health and safety concerns espoused in the resolution. From a converse perspective- a legitimate drive to improve the current ecology would include simpler initiatives to develop clean diesel biofuels through green waste and highly regenerative hemp crops or even to recycle (non- bottle) plastics. Perhaps most relevant, we live near an active volcano...

In short, the proposed justification for this resolution is inaccurate. We have been given erroneous information regarding the source of the catastrophic weather events that are mislabeled as climate change. These disasters have grown in sophistication and scope – the catastrophic wind, rain and fires are attacks. That is the true emergency. Weather manipulation, not climate change, can be mitigated or eliminated and a resolution to that effect would be a brave start in a state so significantly harmed by such an event.

Mahalo for your time and attention

What is the PUBLIC HEALTH EMERGENCY?

Who is calling this "event" an EMERGENCY?

Why is this "event" an "EMERGENCY"?

What is "CLIMATE CHANGE"?

When is CLIMATE CHANGE going to occur?

What will happen when CLIMATE CHANGE happens?

Where is CLIMATE CHANGE going to happen?

What will happen when CLIMATE CHANGE occurs?

Where are all the documented studies proving a "catastrophic" PUBLIC HEALTH EMERGENCY event called CLIMATE CHANGE will happen?

Who has gathered all the proven evidences, written documentations--ALL names of the individuals giving the evidence for documentation?

Where does this person(s) have ALL the documentations of evidence?

Who is "REQUESTING STATEWIDE COORDINATION TO IDENTIFY, PLAN FOR, AND CREATE CROSS-SECTOR SOLUTIONS"?

How do we "STRENGTHEN" HAWAII'S PUBLIC HEALTH RESPONSE TO THE CLIMATE CRISIS?

DEFINE a PUBLIC HEALTH RESPONSE?

WHAT IS THIS SO CALLED "CLIMATE CRISIS"?

WHAT MAKES "IT" A CRISIS?

WHAT IS PROJECTED TO HAPPEN WHEN THIS "CRISIS" HAPPENS?

UNTIL AT LEAST ALL OF THESE QUESTIONS AND THE MANY MORE QUESTIONS TO BE ASKED -- AND ANSWERED -- THE INDIVIDUAL OR INDIVIDUALS MOVING TO SPEND TAXPAYER MONEY -- HAVE ZERO RIGHT TO BE NAMING ANYTHING A PUBLIC HEALTH EMERGENCY AND TAKING ACTION FOR THIS SO CALLED "PUBLIC HEALTH EMERGENCY".

I AM SURE I AM NOT THE ONLY RESIDENT OF HAWAII WANTING FACTS.

I AM ALSO SURE 99.9% OF HAWAII KNOWS NOTHING OF THIS DECLARATION SCR 111.

Please answer me all this questions.

You have zero right to move on this asinine proposal.
