**Thursday, March 31, 2022
1:30 PM**

State Capitol, Conference Room 308, Via Videoconference

**In consideration of
SENATE BILL 573, SENATE DRAFT 1
RELATING TO WILDLIFE**

Senate Bill 573, Senate Draft 1 proposes to require all habitat conservation plans to include an agreement for plan participants to enter and maintain an annual service contract with a stand-by response facility available to provide emergency medical and rehabilitation services to native wildlife affected by activities undertaken within the plan area. **The Department of Land and Natural Resources supports this measure.**

Section 195D-21(2)(C), Hawaii Revised Statutes, requires that each habitat conservation plan shall identify the steps that will be taken to mitigate the impact of any incidental take to the maximum extent practicable. A service agreement with a facility capable of providing emergency medical and rehabilitation services could help to fulfill that requirement in the event of injured wildlife but should be considered with other provisions within each habitat conservation plan.

Thank you for the opportunity to comment on this measure.

RE: SB 573 SD1
Hearing Date: March 31, 2022

Aloha Chair Luke and Vice Chair Yamashita:

Thank you for the opportunity to submit testimony on SB 573 SD1 as I fully support this bill.

SB 573 SD1 is critical for the well-being of our injured wildlife and will ensure permitted wildlife responses and rehabilitation services that are maintained at the highest level for our wildlife to receive the best achievable care.

As a veterinarian and a rancher for almost 40 years, I understand the emergency care needed for the survival of animals. Having a program to provide stellar care to our wildlife, endangered or otherwise, is the best form of action to protect their health and longevity in our ecosystem. It is imperative that this bill pass so all habitat conservation plans include an agreement for plan participants to enter into and maintain an annual service contract with a stand-by and a response facility be made available to provide the emergency care to our precious native wildlife. Our wildlife deserves this oversight and opportunity to be provided timely and professional care.

Thank you for the opportunity to submit this testimony on a topic very dear to my heart and life. If you would like to discuss my knowledge of this matter further, please do not hesitate to contact me directly.

Aloha,

HERBERT M. "TIM" RICHARDS, III

TESTIMONY IN SUPPORT OF S.B. 573, Relating to Wildlife: Habitat Conservation Plans

To the honorable Representative Luke, Chair, Representative Yamashita, Vice Chair and members of the Committee:

I am submitting testimony in **strong support** of SB 573. Thank you for the opportunity to provide comment.

SB 573 Requires all habitat conservation plans (HCPs) to include an agreement for plan participants to enter into and maintain an annual service contract with a stand-by and response facility available to provide emergency medical and rehabilitation services to native wildlife affected by activities undertaken within the scope of the plan. **Since the costs would be incorporated into the fees being paid by entities that are required to have a Habitat Conservation Plan, this does not raise taxes or require State funding.** The costs would be negotiated by each HCP participant and the response provider, similar to how an entity would enter into any other contract for services needed to fulfill operational needs and statutory obligations.

This amendment would require a thorough and proper response procedure for indigenous and endemic wildlife species covered by HCPs when individuals of these species are found injured, as well as a clear means of support for such response actions. At present HCPs do not require an adequate response plan that sets forth an agreement with and funding support for a permitted response organization to ensure response resources are available for injured wildlife treatment and rehabilitation expertise when needed. Instead the funding support stops at the finding of the injured wildlife and neglects the following rehabilitative care to return the injured wildlife to full health. Funding support should be provided as a basic measure to prepare for injured wildlife response and to keep resources available year-round. **This measure would help a wide range of organizations and agencies that provide critical native wildlife response services for all wildlife species, including native birds, bats, monk seals, and seaturtles.**

As our work pertains to native birds and bats, we can only speak to what we have experienced. Of the agreements we reviewed, all have failed to cover this specific response need and instead focus mainly on habitat improvements (i.e. in planting, invasive weed control) and population protection methods (i.e. predator control, re-introduction of species, captive breeding

programs). Although those conservation programs are also important, the inclusion of the process for funding the response to injured wildlife covered by HCPs provides a missing piece necessary to fully respond to protected wildlife species and creates more robust protection of native wildlife throughout the year.

From previous discussions with wildlife agencies and from our first-hand experiences, we have gathered that:

- Indigenous and endemic wildlife is under the responsibility of the Department of Land and Natural Resources. DLNR administrative rules mandate that if indigenous wildlife is injured, it must be brought to a permitted entity for care. Additionally, Hawai'i's indigenous wildlife is protected by federal Migratory Bird Act and or the Endangered Species Act. State or Federal wildlife agencies are not able to provide wildlife rehabilitative care services and therefore rely on partnerships with other organizations to fulfill this role.
- Current HCP requirements only focus on quantifying and mitigating for dead wildlife, while wildlife that are injured and still alive - wildlife that have the possibility of recovering and returning to their wild populations - are neglected because there is no statutory mandate requiring action and follow through.
- The State provides permit regulations as to what is required to care for native species, but in our experience have not been responsible for funding the care of patients impacted by HCP participants. Nor does the State's limited funding allow them to keep these services available in the case members of industry need it.
- Though DLNR may have a cost recovery process for their time, organizations that are not State-run yet provide services for the State are neglected and do not receive support to be ready to provide treatment to wildlife impacted by HCP participants. Providing concrete language to build the necessary avenues for wildlife response will help wildlife agencies follow through on their mandate to protect indigenous wildlife without creating additional work for the agencies.
- HCP participants follow a Downed Wildlife Protocol. The Downed Wildlife Protocol provides significant detail on injured wildlife response in the areas of capture, handling, and points of contact. What is NOT included in the protocol however, is any clear articulation on how participants will support the response work required or ensure its availability. All that is mentioned in the protocol in this area is one line: "non-governmental parties should make prior arrangements, including procedures and payments with the rehabilitation or veterinary care facilities that will be used to treat injured animals". The lack of details and absence of concrete requirements for follow-through in this area opens the door for this weakness to be taken advantage of at the expense of the rehabilitation and veterinary care facilities that are doing the work and who need to find other ways to stay open in order to be available for these purposes.
- By supporting wildlife response organizations via these agreements the benefits may also include:

- Net population benefits as the year-around operations of wildlife rehabilitation programs will treat other indigenous and endemic wildlife patients of the same species of concern adding to the number returned to the wild populations
- Preparedness for emergency response services (i.e. contaminants spill response, disease outbreaks) with the trained experienced staff and a fully operational facility from the response organizations supported in part by these agreements.

Requiring entities needing an HCP agreement to also procure a support agreement with a qualified and permitted response and rehabilitation organization would also provide for first response training for the entity's staff, a supplies and equipment list to perform a response, and create procedures to consult on injured wildlife and assist in the transport of injured wildlife to the response organization(s). This support agreement would cover the costs for readiness to respond year-round and for the treatment and medical care of wildlife species covered by the agreement.

The Hawai'i Wildlife Center provides professional, state-of-the-art treatment for native Hawaiian wildlife affected by contamination, disease and injury. HWC staff members have the experience and capability to manage wildlife-related response, including assessment, training, mobilization, supervision, facilities management, wildlife capture, handling, stabilization and transportation. At the Center, staff will perform triage, assessment, stabilization, rehabilitation, husbandry, quarantine, hydration, feeding, cleaning, monitoring, recovery and release into the wild. The Center also provides emergency response training for agency staff, interns, students and volunteers.

HWC has a Memorandum of Agreement between the Center, the Fish and Wildlife Service and the State Department of Land and Natural Resources. However, while this MOA provides a framework for effective collaboration, it does not ensure that resources are available to keep the Center open and ready to respond to injured wildlife.

We have been open for native wildlife care since September 2012, and have already received over 2,600 patients (majority are birds, with some bats) representing over 40 different native species. In order to keep our critical services available, we need a predictable and consistent source of operational funding. **SB 573 will help ensure that permitted, professionally staffed, wildlife response resources are prepared to help native wildlife adversely affected by human activities as well as help satisfy the statutory responsibility of the State.**

We are a small nonprofit that provides hospital care and rehabilitation to native birds and bats statewide. The way we operate is very similar to a fire station, where the continuity of our services depends on reliable support to keep everything open and operational. HCP participants that have impacts on native wildlife should contribute to keeping response and care available should it be needed. If a fire happens, you don't wait until you see flames to build a fire station.

Thank you for the opportunity to testify on this important matter.

Save Our Shearwaters

Testimony of MOLLY BACHE
Program Coordinator; Save Our Shearwaters

Before the House Committee on FINANCE

Thursday, March 31st, 2022 1:30 PM State Capitol, Via Videoconference

In consideration of SENATE BILL 573 SD 1; RELATING TO WILDLIFE

Dear Representative Luke, Chair, Representative Yamashita, Vice Chair, and members of the Committee:

Thank you for the opportunity to submit comment on SB 573 SD1. **I am in strong support of this bill.**

The passing of SB 573 SD 1 would help ensure that native species involved with a Habitat Conservation Plan (HCP) have permitted, professionally staffed, wildlife response resources available when needed. This amendment would help ensure the viability of permitted wildlife rehabilitation services without having to utilize the State's limited budget.

It's important that HCPs incorporate the resources necessary to support these endemic and endangered species through the stages of rehabilitative care. HCP requirements have remained grey in regard to funding the care of applicable wildlife from the point of admission. The introduction of annual service contracts would provide reassurance to both the HCP participant and wildlife response service. Funding support would help ensure that wildlife response remains operational and available year-round, benefitting both parties. This could also open the door for more collaboration on participant staff training, which has been requested in the past but was often not feasible due to limited resources.

The resources that wildlife response and rehabilitation require need to be acknowledged and allocated within Hawai'i's HCPs. This is the only way to ensure that response services are prepared to fulfill the needs of participants. Supportive funds will be necessary as development (light attraction, collisions, habitat destruction), climate change (Avian Botulism, low foraging success, loss of nesting habitats), and other factors continue to threaten native species populations statewide.

The Save Our Shearwaters (SOS) Program was initiated by the Hawai'i Department of Land and Natural Resources/Division of Forestry and Wildlife in 1979 to respond to the annual grounding of hundreds of light-attracted fledgling shearwaters and petrels. Since initiation, volunteers and residents have collected more than 35,000 downed birds— 90% of which recovered and were released back to the wild. SOS is a federal and state permitted entity that has evolved into a year-round rehabilitation effort for all native birds.

It's important to note that the SOS Program would not exist today without the type of funding proposed in this amendment. Kaua'i Island Utility Cooperative (KIUC) has provided the large majority of Program funding since 2005, which has allowed us to remain operational and respond to native wildlife in need 365 days a year. Developing annual service contracts with additional HCP participants would be more equitable, as the Program has grown to support listed and non-listed species and KIUC's current level of funding provides overhead for both. We have a contract with the State Department of Land and Natural Resources and grant funds to support birds admitted from Federal lands but diversifying our funding sources further would strengthen the stability of this work and lower the financial impact of a service that benefits the island as a whole.

SOS aside, multiple programs statewide work tirelessly to respond to all native wildlife in need (Hawaii Wildlife Center, Ke Kai Ola, Maui Ocean Center and UH SeaGrant, etc). SB 573 SD 1 would help ensure that our indigenous, endemic, and other susceptible wildlife have timely medical support should the need arise, without raising taxes or requiring State funding.

Thank you for the opportunity to provide comment.

Sincerely,

Molly Bache
Program Coordinator
Save Our Shearwaters

Dear Committee Members,

I strongly support SB 573.

SB 573 will provide critical support for native wildlife care services. This bill will help fill essential funding gaps for all of the organizations permitted to respond thus helping a wide range of organizations and agencies that provide critical native wildlife response services for all wildlife species, including native birds, bats, monk seals, and turtles. Additionally, the requirement for all habitat conservation plans (HCPs) to include an agreement for plan participants to enter into and maintain an annual service contract, with a stand-by and response facility available to provide emergency medical and rehabilitation services to native wildlife affected by activities undertaken within the scope of the plan, is a crucial step.

SB 573 will help ensure that permitted, professionally staffed, wildlife response resources are prepared to help native wildlife adversely affected by human activities as well as help satisfy the statutory responsibility of the State.

I encourage you to pass SB 573. Thank you for your consideration.

I strongly support this bill. I was born and raised on O‘ahu and believe that our native wildlife are truly special and should be protected. If a project has a potential harmful impact on any of these species, that project/company should help keep resources available to respond. The company supporting these projects should also get credit for the work and wildlife returned, even if the animal did not come from their property. It should be a win-win for everyone, especially native wildlife. This has the potential to help so many different agencies and organizations performing or relying on critical wildlife rescue work: DOFAW, FWS, NOAA, Hawaii Wildlife Center (native birds & bats), Save our Shearwaters (native birds), Ke Kai Ola (monk seals), Maui Ocean Center and UH SeaGrant (turtles), and more, while not adding additional cost burdens for the State. Mahalo for the opportunity to provide comment.
