**TESTIMONY- IN SUPPORT**
**SB958- 10 Year Moratorium on the Genetic Modification of Taro-**

Aloha Legislators,

We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

We grow kalo and make pa`i`ai (undiluted poi) in our school. We experienced how much the kalo means to Hawaiians, many who believe that it is our older brother from the time of the first Hawaiian. Since I learned about our kalo I'm saying no GMO, leave our older brother alone!

Genetic modification is unnatural. Kalo has been naturally changed by our kupuna who cherished it, grew it and observed it for hundreds of years. Our kalo belongs to the people and the 'aina and we know that if something is genetically modified then someone can own it. We feel that our kalo should not be owned by anyone, it should be shared with everyone.

Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So that means we are the ones they are testing the GMO foods on. So how do you feel about that?

Well we feel that that is completely wrong. What if this food is unsafe? What will this do to us or our families? Or our future families? We believe that food should be grown naturally and not genetically modified. We think its wrong how after someone genetically modifies something that they own it. Did you know that companies are modifying plants like corn so they can't reproduce? So people will have to go back to the companies to get seeds to grow more corn. The GMO companies are preventing nature from doing its work.

Food is supposed to feed us. Kalo does this, and has done so for over a thousand years. Kalo does not need to be genetically modified.

Food is not supposed to be dangerous to ones health. The GMO industry has demonstrated beyond any doubt that their products, GMO foods are dangerous for human consumption by absolutely refusing to have their products labeled. They have spent millions of dollars to fight every attempt that requires labeling. Think about that when the GMO companies say that their food is safe.

Do your job. Represent us and protect us, the youth, the future- as you are all fond of saying. Vote for at least a 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

**SB958- 10 Year Moratorium on the Genetic Modification of Taro-**

*Aloha Legislators,*

*We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.*

*For 1200 years farmers in Hawai'i have been caring for and protecting taro. In Hawai'i taro is the plant of the people- it is our living culture and ancient history, native nutrition and ecological tradition.*

*Taro provides a beloved and unique hypoallergenic food, medicine, sustainable agriculture and industry for Hawaii. Genetically modifying any variety of taro is culturally disrespectful and also poses irreversible and irresponsible dangers to our food, health, environment and economy.*

*We must support sustainable farming & precautionary scientific research that does not expose the taro plant species to the disrespect and risks of genetic engineering. I ask that our elected officials actively support farmers/scientists in publicly accepted and safely advanced methods of protecting taro from land & water issues and invasive pests & diseases.*

*Taro is an incomparably sacred and valuable part of our island community. We join mahi'ai (farmers) of Hawai'i in calling on all legislators to protect Hawaii's unique culture and resources by passing a law to provide a 10 year moratorium on the genetic modification and patenting of taro.*

So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So that means we are the ones they are testing the GMO foods on. So how do you feel about that?

Well we feel that that is completely wrong. What if this food is unsafe? What will this do to us or our families? Or our future families? We believe that food should be grown naturally and not genetically modified. We think its wrong how after someone genetically modifies something that they own it. Did you know that companies are modifying plants like corn so they can't reproduce? So people will have to go back to the companies to get seeds to grow more corn. The GMO companies are preventing nature from doing its work.

Food is supposed to feed us. Kalo does this, and has done so for over a thousand years. Kalo does not need to be genetically modified.

Food is not supposed to be dangerous to ones health. The GMO industry has demonstrated beyond any doubt that their products, GMO foods are dangerous for human consumption by absolutely refusing to have their products labeled. They have spent millions of dollars to fight every attempt that requires labeling. Think about that when the GMO companies say that their food is safe.

Do your job. Represent us and protect us, the youth, the future- as you are all fond of saying. Vote for at least a 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

**SB958- 10 Year Moratorium on the Genetic Modification of Taro-**

Aloha Legislators,

We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

We grow kalo and make pa`i`ai (undiluted poi) in our school. We experienced how much the kalo means to Hawaiians, many who believe that it is our older brother from the time of the first Hawaiian. Since I learned about our kalo I'm saying no GMO, leave our older brother alone!

Genetic modification is unnatural. Kalo has been naturally changed by our kupuna who cherished it, grew it and observed it for hundreds of years. Our kalo belongs to the people and the 'aina and we know that if something is genetically modified then someone can own it. We feel that our kalo should not be owned by anyone, it should be shared with everyone.

Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So that means we are the ones they are testing the GMO foods on. So how do you feel about that?

Well we feel that that is completely wrong. What if this food is unsafe? What will this do to us or our families? Or our future families? We believe that food should be grown naturally and not genetically modified. We think its wrong how after someone genetically modifies something that they own it. Did you know that companies are modifying plants like corn so they can't reproduce? So people will have to go back to the companies to get seeds to grow more corn. The GMO companies are preventing nature from doing its work.

Food is supposed to feed us. Kalo does this, and has done so for over a thousand years. Kalo does not need to be genetically modified.

Food is not supposed to be dangerous to ones health. The GMO industry has demonstrated beyond any doubt that their products, GMO foods are dangerous for human consumption by absolutely refusing to have their products labeled. They have spent millions of dollars to fight every attempt that requires labeling. Think about that when the GMO companies say that their food is safe.

Do your job. Represent us and protect us, the youth, the future- as you are all fond of saying. Vote for at least a 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

**TESTIMONY- IN SUPPORT**
**SB958- 10 Year Moratorium on the Genetic Modification of Taro-**

Aloha Legislators,

We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

We grow kalo and make pa`i`ai (undiluted poi) in our school. We experienced how much the kalo means to Hawaiians, many who believe that it is our older brother from the time of the first Hawaiian. Since I learned about our kalo I'm saying no GMO, leave our older brother alone!

Genetic modification is unnatural. Kalo has been naturally changed by our kupuna who cherished it, grew it and observed it for hundreds of years. Our kalo belongs to the people and the 'aina and we know that if something is genetically modified then someone can own it. We feel that our kalo should not be owned by anyone, it should be shared with everyone.

Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So that means we are the ones they are testing the GMO foods on. So how do you feel about that?

Well we feel that that is completely wrong. What if this food is unsafe? What will this do to us or our families? Or our future families? We believe that food should be grown naturally and not genetically modified. We think its wrong how after someone genetically modifies something that they own it. Did you know that companies are modifying plants like corn so they can't reproduce? So people will have to go back to the companies to get seeds to grow more corn. The GMO companies are preventing nature from doing its work.

Food is supposed to feed us. Kalo does this, and has done so for over a thousand years. Kalo does not need to be genetically modified.

Food is not supposed to be dangerous to ones health. The GMO industry has demonstrated beyond any doubt that their products, GMO foods are dangerous for human consumption by absolutely refusing to have their products labeled. They have spent millions of dollars to fight every attempt that requires labeling. Think about that when the GMO companies say that their food is safe.

Do your job. Represent us and protect us, the youth, the future- as you are all fond of saying. Vote for at least a 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

**TESTIMONY- IN SUPPORT**
**SB958- 10 Year Moratorium on the Genetic Modification of Taro-**

Aloha Legislators,

We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

We grow kalo and make pa`i`ai (undiluted poi) in our school. We experienced how much the kalo means to Hawaiians, many who believe that it is our older brother from the time of the first Hawaiian. Since I learned about our kalo I'm saying no GMO, leave our older brother alone!

Genetic modification is unnatural. Kalo has been naturally changed by our kupuna who cherished it, grew it and observed it for hundreds of years. Our kalo belongs to the people and the 'aina and we know that if something is genetically modified then someone can own it. We feel that our kalo should not be owned by anyone, it should be shared with everyone.

Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So that means we are the ones they are testing the GMO foods on. So how do you feel about that?

Well we feel that that is completely wrong. What if this food is unsafe? What will this do to us or our families? Or our future families? We believe that food should be grown naturally and not genetically modified. We think its wrong how after someone genetically modifies something that they own it. Did you know that companies are modifying plants like corn so they can't reproduce? So people will have to go back to the companies to get seeds to grow more corn. The GMO companies are preventing nature from doing its work.

Food is supposed to feed us. Kalo does this, and has done so for over a thousand years. Kalo does not need to be genetically modified.

Food is not supposed to be dangerous to ones health. The GMO industry has demonstrated beyond any doubt that their products, GMO foods are dangerous for human consumption by absolutely refusing to have their products labeled. They have spent millions of dollars to fight every attempt that requires labeling. Think about that when the GMO companies say that their food is safe.

Do your job. Represent us and protect us, the youth, the future- as you are all fond of saying. Vote for at least a 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

**TESTIMONY- IN SUPPORT**
**SB958- 10 Year Moratorium on the Genetic Modification of Taro-**

Aloha Legislators,

We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

We grow kalo and make pa`i`ai (undiluted poi) in our school. We experienced how much the kalo means to Hawaiians, many who believe that it is our older brother from the time of the first Hawaiian. Since I learned about our kalo I'm saying no GMO, leave our older brother alone!

Genetic modification is unnatural. Kalo has been naturally changed by our kupuna who cherished it, grew it and observed it for hundreds of years. Our kalo belongs to the people and the 'aina and we know that if something is genetically modified then someone can own it. We feel that our kalo should not be owned by anyone, it should be shared with everyone.

Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So that means we are the ones they are testing the GMO foods on. So how do you feel about that?

Well we feel that that is completely wrong. What if this food is unsafe? What will this do to us or our families? Or our future families? We believe that food should be grown naturally and not genetically modified. We think its wrong how after someone genetically modifies something that they own it. Did you know that companies are modifying plants like corn so they can't reproduce? So people will have to go back to the companies to get seeds to grow more corn. The GMO companies are preventing nature from doing its work.

Food is supposed to feed us. Kalo does this, and has done so for over a thousand years. Kalo does not need to be genetically modified.

Food is not supposed to be dangerous to ones health. The GMO industry has demonstrated beyond any doubt that their products, GMO foods are dangerous for human consumption by absolutely refusing to have their products labeled. They have spent millions of dollars to fight every attempt that requires labeling. Think about that when the GMO companies say that their food is safe.

Do your job. Represent us and protect us, the youth, the future- as you are all fond of saying. Vote for at least a 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

**TESTIMONY- IN SUPPORT**
**SB958- 10 Year Moratorium on the Genetic Modification of Taro-**

Aloha Legislators,

We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

We grow kalo and make paʻiʻai (undiluted poi) in our school. We experienced how much the kalo means to Hawaiians, many who believe that it is our older brother from the time of the first Hawaiian. Since I learned about our kalo I'm saying no GMO, leave our older brother alone!

Genetic modification is unnatural. Kalo has been naturally changed by our kupuna who cherished it, grew it and observed it for hundreds of years. Our kalo belongs to the people and the 'aina and we know that if something is genetically modified then someone can own it. We feel that our kalo should not be owned by anyone, it should be shared with everyone.

Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So that means we are the ones they are testing the GMO foods on. So how do you feel about that?

Well we feel that that is completely wrong. What if this food is unsafe? What will this do to us or our families? Or our future families? We believe that food should be grown naturally and not genetically modified. We think its wrong how after someone genetically modifies something that they own it. Did you know that companies are modifying plants like corn so they can't reproduce? So people will have to go back to the companies to get seeds to grow more corn. The GMO companies are preventing nature from doing its work.

Food is supposed to feed us. Kalo does this, and has done so for over a thousand years. Kalo does not need to be genetically modified.

Food is not supposed to be dangerous to ones health. The GMO industry has demonstrated beyond any doubt that their products, GMO foods are dangerous for human consumption by absolutely refusing to have their products labeled. They have spent millions of dollars to fight every attempt that requires labeling. Think about that when the GMO companies say that their food is safe.

Do your job. Represent us and protect us, the youth, the future- as you are all fond of saying. Vote for at least a 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

**SB958- 10 Year Moratorium on the Genetic Modification of Taro-**

Aloha Legislators,

We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

We grow kalo and make pa`i`ai (undiluted poi) in our school. We experienced how much the kalo means to Hawaiians, many who believe that it is our older brother from the time of the first Hawaiian. Since I learned about our kalo I'm saying no GMO, leave our older brother alone!

Genetic modification is unnatural. Kalo has been naturally changed by our kupuna who cherished it, grew it and observed it for hundreds of years. Our kalo belongs to the people and the 'aina and we know that if something is genetically modified then someone can own it. We feel that our kalo should not be owned by anyone, it should be shared with everyone.

Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So that means we are the ones they are testing the GMO foods on. So how do you feel about that?

Well we feel that that is completely wrong. What if this food is unsafe? What will this do to us or our families? Or our future families? We believe that food should be grown naturally and not genetically modified. We think its wrong how after someone genetically modifies something that they own it. Did you know that companies are modifying plants like corn so they can't reproduce? So people will have to go back to the companies to get seeds to grow more corn. The GMO companies are preventing nature from doing its work.

Food is supposed to feed us. Kalo does this, and has done so for over a thousand years. Kalo does not need to be genetically modified.

Food is not supposed to be dangerous to ones health. The GMO industry has demonstrated beyond any doubt that their products, GMO foods are dangerous for human consumption by absolutely refusing to have their products labeled. They have spent millions of dollars to fight every attempt that requires labeling. Think about that when the GMO companies say that their food is safe.

Do your job. Represent us and protect us, the youth, the future- as you are all fond of saying. Vote for at least a 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

**TESTIMONY- IN SUPPORT**
**SB958- 10 Year Moratorium on the Genetic Modification of Taro-**

Aloha Legislators,

We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

We grow kalo and make pa`i`ai (undiluted poi) in our school. We experienced how much the kalo means to Hawaiians, many who believe that it is our older brother from the time of the first Hawaiian. Since I learned about our kalo I'm saying no GMO, leave our older brother alone!

Genetic modification is unnatural. Kalo has been naturally changed by our kupuna who cherished it, grew it and observed it for hundreds of years. Our kalo belongs to the people and the 'aina and we know that if something is genetically modified then someone can own it. We feel that our kalo should not be owned by anyone, it should be shared with everyone.

Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So that means we are the ones they are testing the GMO foods on. So how do you feel about that?

Well we feel that that is completely wrong. What if this food is unsafe? What will this do to us or our families? Or our future families? We believe that food should be grown naturally and not genetically modified. We think its wrong how after someone genetically modifies something that they own it. Did you know that companies are modifying plants like corn so they can't reproduce? So people will have to go back to the companies to get seeds to grow more corn. The GMO companies are preventing nature from doing its work.

Food is supposed to feed us. Kalo does this, and has done so for over a thousand years. Kalo does not need to be genetically modified.

Food is not supposed to be dangerous to ones health. The GMO industry has demonstrated beyond any doubt that their products, GMO foods are dangerous for human consumption by absolutely refusing to have their products labeled. They have spent millions of dollars to fight every attempt that requires labeling. Think about that when the GMO companies say that their food is safe.

Do your job. Represent us and protect us, the youth, the future- as you are all fond of saying. Vote for at least a 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

**SB958- 10 Year Moratorium on the Genetic Modification of Taro-**

Aloha Legislators,

We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

We grow kalo and make pa`i`ai (undiluted poi) in our school. We experienced how much the kalo means to Hawaiians, many who believe that it is our older brother from the time of the first Hawaiian. Since I learned about our kalo I'm saying no GMO, leave our older brother alone!

Genetic modification is unnatural. Kalo has been naturally changed by our kupuna who cherished it, grew it and observed it for hundreds of years. Our kalo belongs to the people and the 'aina and we know that if something is genetically modified then someone can own it. We feel that our kalo should not be owned by anyone, it should be shared with everyone.

Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So that means we are the ones they are testing the GMO foods on. So how do you feel about that?

Well we feel that that is completely wrong. What if this food is unsafe? What will this do to us or our families? Or our future families? We believe that food should be grown naturally and not genetically modified. We think its wrong how after someone genetically modifies something that they own it. Did you know that companies are modifying plants like corn so they can't reproduce? So people will have to go back to the companies to get seeds to grow more corn. The GMO companies are preventing nature from doing its work.

Food is supposed to feed us. Kalo does this, and has done so for over a thousand years. Kalo does not need to be genetically modified.

Food is not supposed to be dangerous to ones health. The GMO industry has demonstrated beyond any doubt that their products, GMO foods are dangerous for human consumption by absolutely refusing to have their products labeled. They have spent millions of dollars to fight every attempt that requires labeling. Think about that when the GMO companies say that their food is safe.

Do your job. Represent us and protect us, the youth, the future- as you are all fond of saying. Vote for at least a 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

**TESTIMONY- IN SUPPORT**
**SB958- 10 Year Moratorium on the Genetic Modification of Taro-**

Aloha Legislators,

We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

We grow kalo and make pa`i`ai (undiluted poi) in our school. We experienced how much the kalo means to Hawaiians, many who believe that it is our older brother from the time of the first Hawaiian. Since I learned about our kalo I'm saying no GMO, leave our older brother alone!

Genetic modification is unnatural. Kalo has been naturally changed by our kupuna who cherished it, grew it and observed it for hundreds of years. Our kalo belongs to the people and the 'aina and we know that if something is genetically modified then someone can own it. We feel that our kalo should not be owned by anyone, it should be shared with everyone.

Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So that means we are the ones they are testing the GMO foods on. So how do you feel about that?

So that means we are the ones they are testing the GMO foods on. So how do you feel about that?

Well we feel that that is completely wrong. What if this food is unsafe? What will this do to us or our families? Or our future families? We believe that food should be grown naturally and not genetically modified. We think its wrong how after someone genetically modifies something that they own it. Did you know that companies are modifying plants like corn so they can't reproduce? So people will have to go back to the companies to get seeds to grow more corn. The GMO companies are preventing nature from doing its work.

Food is supposed to feed us. Kalo does this, and has done so for over a thousand years. Kalo does not need to be genetically modified.

Food is not supposed to be dangerous to ones health. The GMO industry has demonstrated beyond any doubt that their products, GMO foods are dangerous for human consumption by absolutely refusing to have their products labeled. They have spent millions of dollars to fight every attempt that requires labeling. Think about that when the GMO companies say that their food is safe.

Do your job. Represent us and protect us, the youth, the future- as you are all fond of saying. Vote for at least a 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

**TESTIMONY- IN SUPPORT**
**SB958- 10 Year Moratorium on the Genetic Modification of Taro-**

Aloha Legislators,

We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

We grow kalo and make pa`i`ai (undiluted poi) in our school. We experienced how much the kalo means to Hawaiians, many who believe that it is our older brother from the time of the first Hawaiian. Since I learned about our kalo I'm saying no GMO, leave our older brother alone!

Genetic modification is unnatural. Kalo has been naturally changed by our kupuna who cherished it, grew it and observed it for hundreds of years. Our kalo belongs to the people and the 'aina and we know that if something is genetically modified then someone can own it. We feel that our kalo should not be owned by anyone, it should be shared with everyone.

Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So that means we are the ones they are testing the GMO foods on. So how do you feel about that?

Well we feel that that is completely wrong. What if this food is unsafe? What will this do to us or our families? Or our future families? Well we feel that that is completely wrong. What if this food is unsafe? What will this do to us or our families? Or our future families? We believe that food should be grown naturally and not genetically modified. We think its wrong how after someone genetically modifies something that they own it. Did you know that companies are modifying plants like corn so they can't reproduce? So people will have to go back to the companies to get seeds to grow more corn. The GMO companies are preventing nature from doing its work.

Food is supposed to feed us. Kalo does this, and has done so for over a thousand years. Kalo does not need to be genetically modified.

Food is not supposed to be dangerous to ones health. The GMO industry has demonstrated beyond any doubt that their products, GMO foods are dangerous for human consumption by absolutely refusing to have their products labeled. They have spent millions of dollars to fight every attempt that requires labeling. Think about that when the GMO companies say that their food is safe.

Do your job. Represent us and protect us, the youth, the future- as you are all fond of saying. Vote for at least a 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

**SB958- 10 Year Moratorium on the Genetic Modification of Taro-**

Aloha Legislators,

We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

We grow kalo and make pa`i`ai (undiluted poi) in our school. We experienced how much the kalo means to Hawaiians, many who believe that it is our older brother from the time of the first Hawaiian. Since I learned about our kalo I'm saying no GMO, leave our older brother alone!

Genetic modification is unnatural. Kalo has been naturally changed by our kupuna who cherished it, grew it and observed it for hundreds of years. Our kalo belongs to the people and the 'aina and we know that if something is genetically modified then someone can own it. We feel that our kalo should not be owned by anyone, it should be shared with everyone.

Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So that means we are the ones they are testing the GMO foods on. So how do you feel about that?

Well we feel that that is completely wrong. What if this food is unsafe? What will this do to us or our families? Or our future families? We believe that food should be grown naturally and not genetically modified. We think its wrong how after someone genetically modifies something that they own it. The GMO companies are preventing nature from doing its work.

Food is supposed to feed us. Kalo does this, and has done so for over a thousand years. Kalo does not need to be genetically modified.

Food is not supposed to be dangerous to ones health. The GMO industry has demonstrated beyond any doubt that their products, GMO foods are dangerous for human consumption by absolutely refusing to have their products labeled. They have spent millions of dollars to fight every attempt that requires labeling. Think about that when the GMO companies say that their food is safe.

Do your job. Represent us and protect us, the youth, the future- as you are all fond of saying. Vote for at least a 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

**TESTIMONY- IN SUPPORT**
**SB958- 10 Year Moratorium on the Genetic Modification of Taro-**

Aloha Legislators,

We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

We grow kalo and make pa`i`ai (undiluted poi) in our school. We experienced how much the kalo means to Hawaiians, many who believe that it is our older brother from the time of the first Hawaiian. Since I learned about our kalo I'm saying no GMO, leave our older brother alone!

Genetic modification is unnatural. Kalo has been naturally changed by our kupuna who cherished it, grew it and observed it for hundreds of years. Our kalo belongs to the people and the 'aina and we know that if something is genetically modified then someone can own it. We feel that our kalo should not be owned by anyone, it should be shared with everyone.

Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So that means we are the ones they are testing the GMO foods on. So how do you feel about that?

Well we feel that that is completely wrong. What if this food is unsafe? What will this do to us or our families? Or our future families? We believe that food should be grown naturally and not genetically modified. We think its wrong how after someone genetically modifies something that they own it. Did you know that companies are modifying plants like corn so they can't reproduce? So people will have to go back to the companies to get seeds to grow more corn. The GMO companies are preventing nature from doing its work.

Food is supposed to feed us. Kalo does this, and has done so for over a thousand years. Kalo does not need to be genetically modified.

Food is supposed to feed us. Kalo does this, and has done so for over a thousand years. Kalo does not need to be genetically modified.

Food is not supposed to be dangerous to ones health. The GMO industry has demonstrated beyond any doubt that their products, GMO foods are dangerous for human consumption by absolutely refusing to have their products labeled. They have spent millions of dollars to fight every attempt that requires labeling. Think about that when the GMO companies say that their food is safe.

Do your job. Represent us and protect us, the youth, the future- as you are all fond of saying. Vote for at least a 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

**TESTIMONY- IN SUPPORT**
**SB958- 10 Year Moratorium on the Genetic Modification of Taro-**

Aloha Legislators,

We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.

We grow kalo and make pa`i`ai (undiluted poi) in our school. We experienced how much the kalo means to Hawaiians, many who believe that it is our older brother from the time of the first Hawaiian. Since I learned about our kalo I'm saying no GMO, leave our older brother alone!

Genetic modification is unnatural. Kalo has been naturally changed by our kupuna who cherished it, grew it and observed it for hundreds of years. Our kalo belongs to the people and the 'aina and we know that if something is genetically modified then someone can own it. We feel that our kalo should not be owned by anyone, it should be shared with everyone.

Also we feel that genetic modification is unsafe. The companies that genetically modify plants and food haven't had it tested by independent scientists. So we do not know the effects of genetically modified foods and just as the companies refuse to label genetically modified food that makes more people wonder if it is really good for us. So if they don't know what the effects are then we don't know what it could do to our kalo. Did you know that more than half of all foods in stores have genetically modified ingredients? So that means we are the ones they are testing the GMO foods on. So how do you feel about that?

Well we feel that that is completely wrong. What if this food is unsafe? What will this do to us or our families? Or our future families? We believe that food should be grown naturally and not genetically modified. We think its wrong how after someone genetically modifies something that they own it. Did you know that companies are modifying plants like corn so they can't reproduce? So people will have to go back to the companies to get seeds to grow more corn. The GMO companies are preventing nature from doing its work.

Food is supposed to feed us. Kalo does this, and has done so for over a thousand years. Kalo does not need to be genetically modified.

**SB958- 10 Year Moratorium on the Genetic Modification of Taro-**

*Aloha Legislators,*

*We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.*

*For 1200 years farmers in Hawai'i have been caring for and protecting taro. In Hawai'i taro is the plant of the people- it is our living culture and ancient history, native nutrition and ecological tradition.*

*Taro provides a beloved and unique hypoallergenic food, medicine, sustainable agriculture and industry for Hawaii. Genetically modifying any variety of taro is culturally disrespectful and also poses irreversible and irresponsible dangers to our food, health, environment and economy.*

*We must support sustainable farming & precautionary scientific research that does not expose the taro plant species to the disrespect and risks of genetic engineering. I ask that our elected officials actively support farmers/scientists in publicly accepted and safely advanced methods of protecting taro from land & water issues and invasive pests & diseases.*

*Taro is an incomparably sacred and valuable part of our island community. We join mahi'ai (farmers) of Hawai'i in calling on all legislators to protect Hawaii's unique culture and resources by passing a law to provide a 10 year moratorium on the genetic modification and patenting of taro.*

**TESTIMONY- IN SUPPORT**
**SB958- 10 Year Moratorium on the Genetic Modification of Taro-**

*Aloha Legislators,*

*We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species.*

*For 1200 years farmers in Hawai'i have been caring for and protecting taro. In Hawai'i taro is the plant of the people- it is our living culture and ancient history, native nutrition and ecological tradition.*

*Taro provides a beloved and unique hypoallergenic food, medicine, sustainable agriculture and industry for Hawaii. Genetically modifying any variety of taro is culturally disrespectful and also poses irreversible and irresponsible dangers to our food, health, environment and economy.*

*We must support sustainable farming & precautionary scientific research that does not expose the taro plant species to the disrespect and risks of genetic engineering. I ask that our elected officials actively support farmers/scientists in publicly accepted and safely advanced methods of protecting taro from land & water issues and invasive pests & diseases.*

*Taro is an incomparably sacred and valuable part of our island community. We join mahi'ai (farmers) of Hawai'i in calling on all legislators to protect Hawaii's unique culture and resources by voting 'AE! for the 10 year moratorium on the genetic modification and patenting of taro.*

*Taro provides a beloved and unique hypoallergenic food, medicine, sustainable agriculture and industry for Hawaii. Genetically modifying any variety of taro is culturally disrespectful and also poses irreversible and irresponsible dangers to our food, health, environment and economy.*

*We must support sustainable farming & precautionary scientific research that does not expose the taro plant species to the disrespect and risks of genetic engineering. I ask that our elected officials actively support farmers/scientists in publicly accepted and safely advanced methods of protecting taro from land & water issues and invasive pests & diseases.*

*Taro is an incomparably sacred and valuable part of our island community. We join mahi'ai (farmers) of Hawai'i in calling on all legislators to protect Hawaii's unique culture and resources by voting 'AE! for the 10 year moratorium on the genetic modification and patenting of taro.*

For 1200 years farmers in Hawai'i have been caring for and protecting taro. In Hawai'i taro is the plant of the people- it is our living culture and ancient history, native nutrition and ecological tradition. Taro provides a beloved and unique hypoallergenic food, medicine, sustainable agriculture and industry for Hawaii. Genetically modifying any variety of taro is culturally disrespectful and also poses irreversible and irresponsible dangers to our food, health, environment and economy.*

*I support sustainable farming & precautionary scientific research that does not expose the taro species to the disrespect and risks of genetic engineering. I ask that the legislators actively support farmers/scientists in publicly accepted and safely advanced methods of protecting taro from land & water issues and invasive pests & diseases.*

*Taro is an incomparably sacred and valuable part of our island community. We join mahi'ai (farmers) of Hawai'i in calling on you and your fellow legislators to protect all of us and Hawaii's unique culture and resources by passing a law to provide a 10 year moratorium on the genetic modification and patenting of taro.*

*Malama Haloa! Malama Pono,*

*Taro provides a beloved and unique hypoallergenic food, medicine, sustainable agriculture and industry for Hawaii. Genetically modifying any variety of taro is culturally disrespectful and also poses irreversible and irresponsible dangers to our food, health, environment and economy.*

*We must support sustainable farming & precautionary scientific research that does not expose the taro plant species to the disrespect and risks of genetic engineering. I ask that our elected officials actively support farmers/scientists in publicly accepted and safely advanced methods of protecting taro from land & water issues and invasive pests & diseases.*

*Taro is an incomparably sacred and valuable part of our island community. We join mahi'ai (farmers) of Hawai'i in calling on all legislators to protect Hawaii's unique culture and resources by voting 'AE! for the 10 year moratorium on the genetic modification and patenting of taro.*

*Taro provides a beloved and unique hypoallergenic food, medicine, sustainable agriculture and industry for Hawaii. Genetically modifying any variety of taro is culturally disrespectful and also poses irreversible and irresponsible dangers to our food, health, environment and economy.*

*We must support sustainable farming & precautionary scientific research that does not expose the taro plant species to the disrespect and risks of genetic engineering. I ask that our elected officials actively support farmers/scientists in publicly accepted and safely advanced methods of protecting taro from land & water issues and invasive pests & diseases.*

*Taro is an incomparably sacred and valuable part of our island community. We join mahi'ai (farmers) of Hawai'i in calling on all legislators to protect Hawaii's unique culture and resources by voting 'AE! for the 10 year moratorium on the genetic modification and patenting of taro.*

TESTIMONY- IN SUPPORT
SB958- 10 Year Moratorium on the Genetic Modification of Taro

Aloha Legislators,
We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species. For 1200 years farmers in Hawai'i have cared for and protected the most varieties of taro on the planet. In Hawai'i taro is the plant of the people- it is our living culture and ancient history, native nutrition and ecological tradition. Taro provides a beloved and unique hypoallergenic food, medicine, sustainable agriculture and industry for Hawaii. Genetically modifying any variety of taro is culturally disrespectful and also poses irreversible and irresponsible dangers to our food, health, environment and economy.

I support sustainable farming & precautionary scientific research that does not expose the taro species to the disrespect and risks of genetic engineering. I ask that the legislators actively support farmers/scientists in publicly accepted and safely advanced methods of protecting taro from land & water issues and invasive pests & diseases.

Taro is an incomparably sacred and valuable part of our island community. We join mahi'ai (farmers) of Hawai'i in calling on you and your fellow legislators to protect all of us and Hawaii's unique culture and resources by passing a law to provide a 10 year moratorium on the genetic modification and patenting of all varieties of the taro plant species.

TESTIMONY- IN SUPPORT
SB958- 10 Year Moratorium on the Genetic Modification of Taro

Aloha Legislators,
We write to ask that you support the 10 year moratorium on all forms of genetic modification and patenting of the taro (kalo) plant species. For 1200 years farmers in Hawai'i have cared for and protected the most varieties of taro on the planet. In Hawai'i taro is the plant of the people- it is our living culture and ancient history, native nutrition and ecological tradition. Taro provides a beloved and unique hypoallergenic food, medicine, sustainable agriculture and industry for Hawaii. Genetically modifying any variety of taro is culturally disrespectful and also poses irreversible and irresponsible dangers to our food, health, environment and economy.

I support sustainable farming & precautionary scientific research that does not expose the taro species to the disrespect and risks of genetic engineering. I ask that the legislators actively support farmers/scientists in publicly accepted and safely advanced methods of protecting taro from land & water issues and invasive pests & diseases.

Taro is an incomparably sacred and valuable part of our island community. We join mahi'ai (farmers) of Hawai'i in calling on you and your fellow legislators to protect all of us and Hawaii's unique culture and resources by passing a law to provide a 10 year moratorium on the genetic modification and patenting of all varieties of the taro plant species.

**TESTIMONY: IN SUPPORT**

**SB958- 10 Year Moratorium on the Genetic Modification of Taro**

Aloha Legislators,

**I urge you to support SB958 and establish the 10 year moratorium on all forms of genetic modification and patenting of the taro (*kalo*) plant species.**

For over a millennium, farmers in Hawai'i have successfully grown pure taro. Taro is a hypoallergenic, nutritious, and easily digested food, a naturopathic, efficacious medicine, and a sustainable, integrated component of Hawai'i's agrictulture. Genetically mutating any variety of taro is not only culturally disrespectful to Hawai'ian history, religion and society, but it also creates irreversible and irresponsible manipulations of our food, health, environment and economy that will have unforeseen local as well as global ramifications. It is in everyone's best interest if you support the natural, public, safe, and conservative development taro in order to best protect it from threats including pests, diseases, and global warming as well as to preserve it for our future generations.

I support sustainable farming and diligent scientific research of the taro species as opposed to the risky and unknowable outcomes of hastily applied genetic engineering. Additionally, I support protecting taro because:

I enjoy purple, pink, Polynesian, all-traditional poi.

**I urge you to support SB958 and establish the 10 year moratorium on all forms of genetic modification and patenting of the taro (*kalo*) plant species.**

For over a millennium, farmers in Hawai'i have successfully grown pure taro. Taro is a hypoallergenic, nutritious, and easily digested food, a naturopathic, efficacious medicine, and a sustainable, integrated component of Hawai'i's agrictulture. Genetically mutating any variety of taro is not only culturally disrespectful to Hawai'ian history, religion and society, but it also creates irreversible and irresponsible manipulations of our food, health, environment and economy that will have unforeseen local as well as global ramifications. It is in everyone's best interest if you support the natural, public, safe, and conservative development taro in order to best protect it from threats including pests, diseases, and global warming as well as to preserve it for our future generations.

I support sustainable farming and diligent scientific research of the taro species as opposed to the risky and unknowable outcomes of hastily applied genetic engineering. Additionally, I support protecting taro because:

taro is ~~one~~ the of Hawai'i's essential agricultural treasures. & in some cases, taro is an amakua & is a symbol for hawaiians that represents "ohana" (family).
