

Cultivating 🥔 Hawaii's tech sector

## In consideration of SB 39 RELATING TO REPORTS ON THE HAWAII CANCER RESEARCH SPECIAL FUND.

Chair Oshiro, Vice Chair Lee and Members of the House Committee on Finance

The High Technology Development Corporation (HTDC) supports and recommends additional language to SB 39 which proposes to require the University of Hawaii to report semiannually on the moneys in the Hawaii Cancer Research Special Fund, including deposits, expenditures, and other transactions.

HTDC supports the development of the Cancer Research Center of Hawaii (CRCH) in Kakaako. Given the current economic and fiscal crisis, HTDC is concerned that the moneys in the Cancer Research Special Fund will be diverted to fund other needy and cash-strapped State programs to balance the budget.

As you are aware, HTDC's mission is to diversify Hawaii's economy through the facilitation and growth of the commercial high tech industry. Both the John A. Burns School of Medicine (JABSOM) and proposed CRCH (once built) support the growth of Hawaii's life sciences and biotechnology research and development niche which is critical to the growth of local tech entrepreneurs and startup companies in Hawaii's growing biosciences fields including biomedical, bioinformatic, and biotechnology. For these reasons and a variety of other reasons including the need for action on the part of the university and their project developer under the current economic crisis, we would support a more definitive approach than the proposed semi-annual reports in SB39.

Because a mere submission of a report does not provide urgency for this extremely important project, we suggest that the University provide written input from the University's CRCH project consultants including the project developer on the recent progress made since the Joint Senate Committees hearing on January 29, 2009. Senate Committees on Higher Education and Health were advised by the University that they would provide committee members with more information on the status of their negotiations with the project developer after the Board of Regents meeting on February 20th. However, given the Council on Revenues Report on March 12<sup>th</sup>, we urge this committee to consider other more immediate actions beyond SB 39 that will provide the legislature fresh information on the status and activities of the University, project developer, and project milestones.

Again, given recent statements of the University before the Senate Committees on Higher Education and Health and the time passed since the project developer was awarded the CRCH project approximately four years ago, the CRCH project should be considered "shovel ready" and therefore can become an immediate financial and economic contributor to the State's current economic crisis. It is important for the Legislature to be fully aware of the status of the "front end" activities which currently include an agreement with the project developer and predevelopment activities necessary to meet the schedule proferred by the University at the hearing on January 29<sup>th</sup>, so as to assure the project is adequately funded. Specifically, the University stated ground breaking would occur in early 2010 with completion by the end of 2012/2013.

Since highly specialized space such as cancer research laboratories involve a great deal more planning and coordination with users, typical transaction and design milestones could be the trigger for generating reports. Such milestones would include (1) executed development agreement and notice to proceed, (2) completion of programming, (3) completion of concept design, (4) completion of schematic design, and (5) completion of design development. The reports would be due on the earlier of completion of such milestones or at the end of each calendar quarter commencing on June 30, 2009. These reports and actions should assure the commitment and need for funds contained in the CRCH Special Fund, and prevent potential raiding of the fund for other non-CRCH purposes.

We have faith that all parties are able and willing to complete their roles sooner rather than later to accomplish what needs to be done for the State and its citizens – a national cancer research center helping to save lives in a diverse multi-cultural community and an economic driver for tech-based research and development activities.

Thank you for the opportunity to submit testimony in support with recommendations for amendments.

Legislative Testimony

### Written Testimony Presented Before the House Committee on Finance

April 1, 2009 at 12:00 pm By Virginia S. Hinshaw, Chancellor and Michele Carbone, M.D., Ph.D. Interim Director Cancer Research Center of Hawai'i Professor and Chairman, Department of Pathology John A. Burns School of Medicine University of Hawai'i at Mānoa

## SB 39 RELATING TO REPORTS ON THE HAWAII CANCER RESEARCH SPECIAL FUND

Chair Oshiro, Vice Chair Lee and members of the Committee:

As interim director of the UH Mānoa Cancer Research Center, I appreciate the opportunity to provide testimony on SB 39, which would require regular financial reports on the Cancer Research Special Fund. I am pleased to support this measure because it promotes transparency in financial accounting relating to this Special Fund.

Our efforts are directed at providing better cancer care to improve the health and well being of the people of Hawai'i – a great goal in which you, as members of Hawai'i's Legislature, are major partners through your establishment of this Special Fund. We are very grateful for your strong support.

There are two priorities on which we are focused at this time and, thankfully, can be accomplished through on-going funding from the State's cigarette-tax to the Special Fund. Those priorities are: 1) hiring faculty to provide the advances in cancer research and facilitate coordination of clinical trials and; 2) building the new Cancer Research Center facility to support those efforts. We are making progress in recruiting more talented researchers to the ranks of our existing excellent faculty and in the planning for the construction for the new cancer center building which will serve as a demonstration of the community's collective commitment to this goal. In that way, we stay firmly on the path of meeting the high standards required to maintain

our current National Cancer Institute designation and move toward the goal of a comprehensive cancer center designation.

Chancellor Hinshaw understands the importance of this effort to the University of Hawai'i and to the State of Hawai'i; and consequently she has asked me, as the interim Cancer Center director, to work with all due speed. As time is of the essence to continue our progress, I am working with the Center's program leaders, the leadership of our medical school and our local hospital systems for the purpose of maintaining our current NCI designation, to begin construction of the new Cancer Center building and to secure the foundation for the future of clinical cancer research in Hawai'i.

Thank you for the opportunity to provide my comments on this issue.

March 31, 2009

Committee on Finance Representative Marcus Oshiro, Chair Representative Marilyn Lee, Vice Chair

Hearing: 12:00 P.M., Wednesday, April 1, 2009 Hawaii State Capitol, Room 308

#### RE: SB39, Relating to Reports on the Hawaii Cancer Research Special Fund

#### **Testimony in Support**

Chair Oshiro, Vice Chair Lee and members of the Committee on Finance. My name is George Massengale and I am here today on behalf of the American Cancer Society Hawaii Pacific Inc. Thank you for the opportunity to offer testimony today in support of SB39. This bill requires the University of Hawaii to report semi-annually on the moneys in Hawaii Cancer Research Special Fund including deposits, expenditures and transactions.

Three years ago the American Cancer Society strongly supported legislation that raised the cigarette tax in Hawaii and allocated a portion of the new revenues into the Hawaii Cancer Research Special Fund for a new CRCH research facility in Kakaako. In addition, monies in the fund could be utilized for operating expenses.

In October of last year a new program was launched in Maui to improve that island's access to oncologists. Until this program was launched, Maui patients had to travel to Oahu for participation in clinical trials. We acknowledge and applaud CRCH for establishing this clinical trials program in Maui. No doubt this will make access to research treatments easier.

We also understand that there have been problems associated with initiating construction of the new research facility in Kakaako. The Society, along with many others, has concerns regarding the delays in moving this project forward. If requiring the University of Hawaii to report more frequently to the legislature on the status of this project will speed things up, then we would encourage passing this measure. **The bottom line is, the sooner this facility is in operation, the sooner lives will be saved.** 

In closing we would point out that we believe that "time is of the essence." CRCH is a National Cancer Institute (NCI) designated research center. If efforts to undertake construction are not begun this year, we fear that CRCH could loose their NCI designation and further NCI support.

Mahalo for giving me the opportunity to provide testimony on this measure here today.

Sincerely,

IML

George Massengale, JD Director of Government Relations
