LATE Testimony

Testimony of The Nature Conservancy of Hawai'i
Supporting S.C.R. 72 Requesting the United States
Department of Agriculture and the United States Department of Homeland
Security to Collaborate and Share Information with the Department of Agriculture
to Prevent Invasive Species from Entering the State of Hawai'i
House Committee on Agriculture
House Committee on Economic Revitalization, Business, & Military Affairs
Friday, April 17, 2009, 10:30AM, Room 312

The Nature Conservancy of Hawai'i is a private non-profit conservation organization dedicated to the preservation of Hawai'i's native plants, animals, and ecosystems. The Conservancy has helped to protect nearly 200,000 acres of natural lands for native species in Hawai'i. Today, we actively manage more than 32,000 acres in 11 nature preserves on O'ahu, Maui, Hawai'i, Moloka'i, Lāna'i, and Kaua'i. We also work closely with government agencies, private parties and communities on cooperative land and marine management projects.

The Nature Conservancy of Hawai'i supports S.C.R. 72.

Invasive insects, diseases, snakes, weeds, and other pests are one of the greatest threats to Hawai'i's economy, agriculture, natural environment, and the health and lifestyle of its people.

The Hawai'i Department of Agriculture (HDOA) is responsible for the inspection of domestic cargo and passengers arriving at Hawai'i's ports to protect the state from introduction of unwanted plant and animal pests and diseases. The HDOA also inspects interisland shipments to prevent movement of pests between islands. The U.S. Department of Agriculture and the U.S. Department of Homeland Security are responsible for inspecting international passenger and cargo arrivals.

In some instances, federal quarantine laws are primarily designed to protect mainland agriculture and do not take into account the potential risks to Hawai'i crops or native habitat. For this reason, it is essential that federal inspection agencies collaborate and share information with HDOA officials to ensure the highest possible level of protection and the smooth movement of cargo into and around the state.

The HDOA has developed a multi-faceted Biosecurity Plan to enhance its own efforts with more inspectors, more efficient and effective inspection services, joint state-federal inspection facilities, and agreements with importers and producers for improved sanitary protocols before items are shipped to Hawai'i. The financial and personnel support provided by the Legislature, including the authority to assess a reasonable service fee on incoming cargo, has been essential to implementing this plan. A critical component of the Biosecurity Plan is the cooperation and partnership of the federal inspection authorities.

LATE
Testimony

April 16, 2009

TESTIMONY IN SUPPORT OF SENATE CONCURRENT RESOLUTION S.C.R. NO. 72

Dear Chair Tsuji, Vice Chair Wooley, Committee on Agriculture and Chair McKelvey, Vice Chair Choy, Committee on Economic Revitalization, Business and Military Affairs:

Thank you for the opportunity to provide testimony in support of S.C.R. No. 72, requesting the U.S. Department of Agriculture and the U.S. Department of Homeland Security to collaborate and share information with the Department of Agriculture to prevent invasive species from entering the State of Hawaii.

The Hawaii Forest Industry Association (HFIA) is supportive of legislation that prevents the spread of invasive species to Hawaii. It is one of the greatest threats to Hawaii's economy, natural environment, and the health and lifestyle of the people of Hawaii. Invasive species have led to crop losses, native species extinction, the destruction of native forests, the spread of disease and the quarantine of exported agricultural crops. Eradication programs have also cost the State millions of dollars.

In 2003, agricultural inspections shifted from the U.S. Department of Agriculture to the U.S. Department of Homeland Security, Customs and Boarder Protection. As a result of this change, pest interceptions have dropped drastically resulting in an influx of invasive species to farms and conservation areas across the nation.

HFIA supports the prevention of invasive species to Hawaii and efforts to ensure that our farms, pristine forests and other conservation areas are protected. It is for these reasons we support the intent of S.C.R. No. 72 which requests that the U.S. Department of Agriculture and the U.S. Department of Homeland Security collaborate and share information with the State of Hawaii to improve detection capabilities and maximize opportunities to prevent invasive species from entering the State. Recognizing the role of the U.S. Department of Homeland Security, we support agency interaction and collaboration, but in a manner that will not jeopardize our nation's national security initiatives.

Sincerely,

Heather Gallo
Executive Director, Hawaii Forest Industry Association

CALIFORNIA DEPARTMENT OF
FOOD & AGRICULTURE
A. G. Kawamura, Secretary

DATE
Exclusion

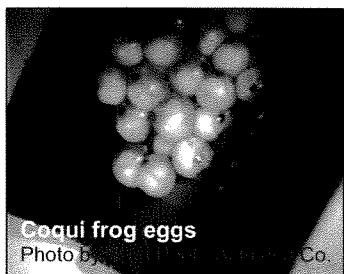

DATE: April 14, 2009
TO: All County Agricultural Commissioners
FROM: Plant Health and Pest Prevention Services
SUBJECT: **PEST EXCLUSION ADVISORY NO. 07-2009**
Coqui Frogs Intercepted on Plant Shipments from Hawaii

Coqui frogs have been intercepted several times in recent months on plant shipments from Hawaii. The purpose of this advisory is to inform county inspectors of CDFA's procedural policy for coqui frogs (*Eleutherodactylus coqui*).

Inspectors should carefully inspect all Hawaiian plant material for coqui frog life stages:

Coqui frogs often perch on twigs, between leaves in whorls, axils and folds, or in dead leaves hanging from the plant. They may also be found in protected cavities near the ground such as dead, curled leaves or rolled palm frond petioles. They are often found on broad-leaved plants, but they will use any leaf that will support their weight and provide cover. Coqui frogs often deposit egg clutches (see photo below taken by Alameda County inspectors) in leaf litter or in rolled or folded leaves near the ground.

In their native Puerto Rico, studies show that coqui frog eggs will develop, *undergoing the tadpole stage inside the egg*, in about 17-26 days and emerge as small but fully formed "froglings". In native environments, the time between clutches is about eight weeks.

Coqui frog eggs

Coqui froglet
<http://www.psu.edu>

Coqui frog
Photo by: Caryn Moen, Shasta Co

Send any suspect samples to CDFA's Plant Pest Diagnostics Laboratory for identification:

For submission to the lab, frogs and eggs may be placed in vials containing isopropanol (isopropyl alcohol). Any additional specimens that are collected can be killed using any method, including freezing or mechanical destruction.

After a review of the biology of coqui frogs, it has been determined they are not agricultural pests. Therefore, all coqui frogs sent to the lab will be identified, but will not receive a rating from the CDFA Plant Pest Diagnostics Lab. Therefore, no action will be taken for coqui frog-infested shipments under the California Food and Agricultural Code statutes.

(Continued on next page)

Once the specimen has been identified as a coqui frog (*Eleutherodactylus coqui*), county inspectors may reject the infested shipment under:

1. Title 14 California Code of Regulations, Section 671

The California Fish and Game Commission's Wild Animal Policy (Title 14, Section 671 of the California Code of Regulations) makes it illegal to import, transport, or possess coqui frog in California without a permit. Under the Wild Animal Policy, coqui frogs have been designated as "detrimental animals" to our native wildlife and are prohibited entry into California.

2. Fish and Game Code, Section 2117

Fish and Game Code, Section 2117 provides the county agricultural commissioners with the authority to enforce the California Fish and Game Commission's Wild Animal Policy (Title 14, Section 671 of the California Code of Regulations).

Disposition Options for Rejected Shipments:

1. Treatment

There are currently no registered pesticides available in California for control of coqui frogs. Diluted citric acid has been used as a spot treatment in Hawaii for the control of coqui frogs. Hot water treatments have also been used by Hawaii's horticulture industry as an effective treatment. If treatment is selected as the disposition option, inspectors may view the information at the following sites:

- <http://www.ctahr.hawaii.edu/>: This is published by the University of Hawaii and provides humane methods of capture and disposal of coqui frog.
- http://www.hear.org/species/eleutherodactylus_coqui/: This site is a compilation of many websites with information on coqui frog identification, biology, and treatment.

2. Return Out of State

This option is to be used only if the **inspector considers the pest risk low and Interior Pest Exclusion Staff is contacted** to verify the receiving state will accept the shipment.

3. Destruction

For questions regarding this advisory, please contact Katie Filippini at (916) 654-0312 or by email at: kfilippini@cdfa.ca.gov.

"(1) IN GENERAL.—The Secretary shall reallocate to other States in accordance with paragraph (2) any amounts made available for a fiscal year under this section that are not obligated or expended by a date during that fiscal year determined by the Secretary.

"(2) PRO RATA ALLOCATION.—The Secretary shall allocate funds described in paragraph (1) pro rata to the remaining States that applied during the specified grant application period.

"(3) USE OF REALLOCATED FUNDS.—Funds allocated to a State under this subsection shall be used by the State only to carry out projects that were previously approved in the State plan of the State.

"(j) FUNDING.—Of the funds of the Commodity Credit Corporation, the Secretary of Agriculture shall make grants under this section, using—

"(1) \$10,000,000 for fiscal year 2008;

"(2) \$49,000,000 for fiscal year 2009; and

"(3) \$55,000,000 for each of fiscal years 2010 through 2012."

Subtitle B—Pest and Disease Management

SEC. 10201. PLANT PEST AND DISEASE MANAGEMENT AND DISASTER PREVENTION.

(a) IN GENERAL.—Subtitle A of the Plant Protection Act (7 U.S.C. 7711 et seq.) is amended by adding at the end the following:

"SEC. 420. PLANT PEST AND DISEASE MANAGEMENT AND DISASTER PREVENTION.

"(a) DEFINITIONS.—In this section:

"(1) EARLY PLANT PEST DETECTION AND SURVEILLANCE.—The term 'early plant pest detection and surveillance' means the full range of activities undertaken to find newly introduced plant pests, whether the plant pests are new to the United States or new to certain areas of the United States, before—

"(A) the plant pests become established; or

"(B) the plant pest infestations become too large and costly to eradicate or control.

"(2) SPECIALTY CROP.—The term 'specialty crop' has the meaning given the term in section 3 of the Specialty Crops Competitiveness Act of 2004 (7 U.S.C. 1621 note; Public Law 108–465).

"(3) STATE DEPARTMENT OF AGRICULTURE.—The term 'State department of agriculture' means an agency of a State that has a legal responsibility to perform early plant pest detection and surveillance activities.

"(b) EARLY PLANT PEST DETECTION AND SURVEILLANCE IMPROVEMENT PROGRAM.—

"(1) COOPERATIVE AGREEMENTS.—The Secretary shall enter into a cooperative agreement with each State department of agriculture that agrees to conduct early plant pest detection and surveillance activities.

"(2) CONSULTATION.—In carrying out this subsection, the Secretary shall consult with—

"(A) the National Plant Board; and
"(B) other interested parties.

"(3) FEDERAL ADVISORY COMMITTEE ACT.—The Federal Advisory Committee Act (5 U.S.C. App.) shall not apply to consultations under this subsection.

"(4) APPLICATION.—

"(A) IN GENERAL.—A State department of agriculture seeking to enter into a cooperative agreement under this subsection shall submit to the Secretary an application containing such information as the Secretary may require.

"(B) NOTIFICATION.—The Secretary shall notify applicants of—

"(i) the requirements to be imposed on a State department of agriculture for auditing of, and reporting on, the use of any funds provided by the Secretary under the cooperative agreement;

"(ii) the criteria to be used to ensure that early pest detection and surveillance activities supported under the cooperative agreement are based on sound scientific data or thorough risk assessments; and

"(iii) the means of identifying pathways of pest introductions.

"(5) USE OF FUNDS.—

"(A) PLANT PEST DETECTION AND SURVEILLANCE ACTIVITIES.—A State department of agriculture that receives funds under this subsection shall use the funds to carry out early plant pest detection and surveillance activities approved by the Secretary to prevent the introduction or spread of a plant pest.

"(B) SUBAGREEMENTS.—Nothing in this subsection prevents a State department of agriculture from using funds received under paragraph (4) to enter into subagreements with political subdivisions of the State that have legal responsibilities relating to agricultural plant pest and disease surveillance.

"(C) NON-FEDERAL SHARE.—The non-Federal share of the cost of carrying out a cooperative agreement under this section may be provided in-kind, including through provision of such indirect costs of the cooperative agreement as the Secretary considers to be appropriate.

"(D) ABILITY TO PROVIDE FUNDS.—The Secretary shall not take the ability to provide non-Federal costs to carry out a cooperative agreement entered into under subparagraph (A) into consideration when deciding whether to enter into a cooperative agreement with a State department of agriculture.

"(6) SPECIAL FUNDING CONSIDERATIONS.—The Secretary shall provide funds to a State department of agriculture if the Secretary determines that—

"(A) the State department of agriculture is in a State that has a high risk of being affected by 1 or more plant pests or diseases, taking into consideration—

"(i) the number of international ports of entry in the State;

"(ii) the volume of international passenger and cargo entry into the State;

"(iii) the geographic location of the State and if the location or types of agricultural commodities produced in the State are conducive to agricultural pest and disease establishment due to the climate, crop diversity, or natural resources (including unique plant species) of the State; and

"(iv) whether the Secretary has determined that an agricultural pest or disease in the State is a Federal concern; and

"(B) the early plant pest detection and surveillance activities supported with the funds will likely—

"(i) prevent the introduction and establishment of plant pests; and

"(ii) provide a comprehensive approach to complement Federal detection efforts.

"(7) REPORTING REQUIREMENT.—Not later than 90 days after the date of completion of an early plant pest detection and surveillance activity conducted by a State department of agriculture using funds provided under this section, the State department of agriculture shall submit to the Secretary a report that describes the purposes and results of the activities.

"(c) THREAT IDENTIFICATION AND MITIGATION PROGRAM.—

"(1) ESTABLISHMENT.—The Secretary shall establish a threat identification and mitigation program to determine and address threats to the domestic production of crops.

"(2) REQUIREMENTS.—In conducting the program established under paragraph (1), the Secretary shall—

"(A) develop risk assessments of the potential threat to the agricultural industry of the United States from foreign sources;

"(B) collaborate with the National Plant Board; and

"(C) implement action plans for high consequence plant pest and diseases to assist in preventing the introduction and widespread dissemination of new plant pest and disease threats in the United States.

"(3) REPORTS.—Not later than 1 year after the date of enactment of this paragraph, and annually thereafter, the Secretary shall submit to the Committee on Agriculture of the House of Representatives and the Committee on Agriculture, Nutrition, and Forestry of the Senate a report on the action plans described in paragraph (2), including an accounting of funds expended on the action plans.

"(d) SPECIALTY CROP CERTIFICATION AND RISK MANAGEMENT SYSTEMS.—The Secretary shall provide funds and technical assistance to specialty crop growers, organizations representing specialty crop growers, and State and local agencies working with specialty crop growers and organizations for the development and implementation of—

"(1) audit-based certification systems, such as best management practices—

"(A) to address plant pests; and

"(B) to mitigate the risk of plant pests in the movement of plants and plant products; and

"(2) nursery plant pest risk management systems, in collaboration with the nursery industry, research institutions, and other appropriate entities—

"(A) to enable growers to identify and prioritize nursery plant pests and diseases of regulatory significance;

"(B) to prevent the introduction, establishment, and spread of those plant pests and diseases; and

"(C) to reduce the risk of and mitigate those plant pests and diseases.

(e) FUNDING.—*Of the funds of the Commodity Credit Corporation, the Secretary shall make available to carry out this section—*

"(1) \$12,000,000 for fiscal year 2009;

"(2) \$45,000,000 for fiscal year 2010;

"(3) \$50,000,000 for fiscal year 2011; and

"(4) \$50,000,000 for fiscal year 2012 and each fiscal year thereafter."

(b) CONGRESSIONAL DISAPPROVAL.—*Congress disapproves the rule submitted by the Secretary of Agriculture relating to cost-sharing for animal and plant health emergency programs (68 Fed. Reg. 40541 (2003)), and such rule shall have no force or effect.*

SEC. 10202. NATIONAL CLEAN PLANT NETWORK.

(a) IN GENERAL.—*The Secretary shall establish a program to be known as the "National Clean Plant Network" (referred to in this section as the "Program").*

(b) REQUIREMENTS.—*Under the Program, the Secretary shall establish a network of clean plant centers for diagnostic and pathogen elimination services to—*

(1) produce clean propagative plant material; and

(2) maintain blocks of pathogen-tested plant material in sites located throughout the United States.

(c) AVAILABILITY OF CLEAN PLANT SOURCE MATERIAL.—*Clean plant source material may be made available to—*

(1) a State for a certified plant program of the State; and

(2) private nurseries and producers.

(d) CONSULTATION AND COLLABORATION.—*In carrying out the Program, the Secretary shall—*

(1) consult with State departments of agriculture, land grant universities, and NLGCA Institutions (as defined in section 1404 of the National Agricultural Research, Extension, and Teaching Policy Act of 1977 (7 U.S.C. 3103)); and

(2) to the extent practicable and with input from the appropriate State officials and industry representatives, use existing Federal or State facilities to serve as clean plant centers.

(e) FUNDING.—*Of the funds of the Commodity Credit Corporation, the Secretary shall use to carry out the Program \$5,000,000 for each of fiscal years 2009 through 2012, to remain available until expended.*

SEC. 10203. PLANT PROTECTION.

(a) REVIEW OF PAYMENT OF COMPENSATION.—*Section 415(e) of the Plant Protection Act (7 U.S.C. 7715(e)) is amended in the second sentence by striking "of longer than 60 days".*

(b) SECRETARIAL DISCRETION.—*Section 442(c) of the Plant Protection Act (7 U.S.C. 7772(c)) is amended by striking "of longer than 60 days".*

Congress of the United States

Washington, DC 20515

July 8, 2008

The Honorable Ed Schafer
Secretary
United States Department of Agriculture
1400 Independence Avenue SW
Washington, DC 20250

Mr. Secretary:

We write to enlist your support for a cooperative agreement between your Department and the Hawaii Department of Agriculture as authorized in Section 10201 of the Food, Conservation, and Energy Act of 2008. In this section, the Congress authorizes cooperative agreements as part of an Early Plant Pest Detection and Surveillance Improvement Program. We believe that Hawaii offers an ideal location to demonstrate processes and procedures to find invasive plant pests new to the continental United States as well as our state of Hawaii.

While Hawaii satisfies multiple criteria for the awarding of cooperative agreements, two characteristics are especially prominent. First, Hawaii contains 25% of the organisms on the list of Threatened and Endangered Species, and this vulnerable biodiversity must be protected from invasive alien species. Unfortunately, many of Hawaii's unique plant and animal life is already extinct. In fact, of all the plants and birds known to be extinct in the U.S., two-thirds were from Hawaii.

Hawaii has been at high risk for new pest introduction in the past. The varroa mite is established on the Island of Oahu and now threatens honey bees statewide. This pest also endangers related industries including honey production, crop pollination, and queen bee export to markets worldwide. The Asian Citrus Psyllid entered Hawaii two years ago, and now threatens Hawaii crop shipments to California and other citrus producing states as a vector of the citrus greening disease now destroying the citrus industry in Florida. The light brown apple moth, which has been in Hawaii for over a hundred years, was recently discovered in California, (likely introduction from Australia, home range of the moth) and an eradication effort is now underway at a cost of over \$50 million. Reports prepared for Congress and the USDA have stated that invasive species are entering Hawaii two million times more rapidly than the natural rate, and establishing themselves in the islands five hundred times more often than any other state in the Nation.

Second, in Hawaii, the various federal, state, and local regulatory agencies are working together. A cooperative agreement that supports increased coordination among these agencies will improve the inspection process for plant pests and will have significant benefits to other ports of entry in the United States. These are some of the current collaborative activities:

- USDA-HDOA Pathway Risk Analysis - Evaluation of the pests currently being introduced into Hawaii; what risks they pose; where they originated; and what

threats to Hawaii are emerging in the next 10 to 20 years. This evaluation will help prioritize use of financial resources and determine which pathways need attention, and how best to design and fund prevention systems.

- USDA-HDOA Agricultural Quarantine Inspection Monitoring (AQIM) pilot – The long-term goal is to facilitate risk-based decision-making by both HDOA and USDA, using data that identifies risk factors associated with various entry pathways and commodities destined for arrival to the State. AQIM National Program leaders, Western Region officers, and HDOA are leading this project.
- Alien Species Action Plan (ASAP) at Kahului Airport – On-going prevention activities at the Kahului, Maui Airport include educational outreach, data information systems, risk assessments, and the first joint-use inspection facility.
- Joint-Use (federal-state) Inspection Facilities at Honolulu International Airport – Incorporates ASAP methodology for Honolulu. The port of Honolulu clears 95% of the passengers and cargo into the state. The objective is to accommodate the anticipated Guam military build-up in 2009-2010. The volume of cargo to depart Guam is expected to increase by as much as 600% over the next two years. Hawaii will become a major staging area for both commercial and military cargo. Prevention systems must be able to address invasive species, as this build-up will increase the invasive species pathway between the Asia-Pacific region and the West Coast.

At the local level, the Hawaii State Legislature recently passed a measure that establishes the Hawaii Biosecurity Program. The measure requires the department to create a multi-dimensional system to:

- Prevent the entry into the state and movement from island to island of pests and other illegal organisms;
- Respond effectively to eradicate, control, reduce, and suppress incipient and established pests and other illegal organisms;
- Work collaboratively with other state and federal government agencies and agricultural commodity groups to establish pest prevention programs; and
- Plan, design, and construct joint federal-state inspection facilities statewide.

In short, a cooperative agreement with Hawaii offers a unique opportunity to design an overarching prevention strategy that will benefit the nation and the state of Hawaii. By entering into a cooperative agreement to develop and implement an early plant pest detection and surveillance improvement program, we can set objectives and determine the best use of federal and state resources. A singular prevention method (singular inspection at the port) is no longer adequate. With an ever-expanding global market, multi-dimensional prevention systems that provide coordinated mitigation measures utilizing federal and state resources cohesively and comprehensively is a necessity. Such coordination and collaboration offer the best chance of protecting agriculture on the U.S. mainland and Hawaii, as well as Hawaii's unique biodiversity.

We urge you to support a cooperative agreement with the Hawaii Department of Agriculture to better manage plant pests and diseases, and in so doing, take a significant step toward preventing plant pest disasters to agriculture and the natural environment in the continental United States and the state of Hawaii.

Thank you for your consideration of our request.

Sincerely,

Daniel K. Inouye
