CHAIRPERSON, BOARD OF AGRICULTURE

BEFORE THE HOUSE COMMITTEES ON ENERGY & ENVIRONMENTAL PROTECTION & AGRICULTURE

FEBRUARY 7, 2017
9:00 A.M.
CONFERENCE ROOM 325

HOUSE BILL NO. 790
RELATING TO ENVIRONMENTAL PROTECTION

Chairpersons Lee and Creagan and Members of the Committee:

Thank you for the opportunity to testify on House Bill No. 790. The purpose of this bill is to protect the state's environment and residents from unintended impacts of large-scale pesticide use, requiring mandatory reporting of pesticide use and establishing notification requirements for outdoor applications of pesticides. The Hawaii Department of Agriculture has strong reservations about this measure.

The bill's requirement for prior public notification of outdoor pesticide applicants of any pesticide, whether restricted use pesticide or not, exceeds EPA label requirements without apparent scientific basis. The Bill's requirement for recordkeeping and annual pesticide use reporting for all outdoor applications to the Department for public posting will necessitate hiring of additional Department staff to enforce this reporting activity. Hiring of new staff and maintenance of such a databank would be a strain on existing state funds and would divert limited staff resources from primary enforcement responsibilities. The commercial agricultural entities required to submit this pesticide use information may claim that some of the required information is confidential business information protected from public disclosure under section 92F-13(3), HRS, of the Uniform Information Practices Act, also known as the State public

records law. If the determination is made that the confidentiality claim is justified, that information could not be publicly disclosed.

The Department submits that language in this bill seems to target a segment of the farming community. Although the expressed mission of this bill is to protect children from exposure to pesticides, this bill targets only one segment of the community that uses pesticides. Cases involving potential pesticide exposures to children or near schools were primarily due to pesticide use by homeowners and landscapers. This bill does not seem to address the primary route of exposure that poses the highest risk.

Beginning in January 2017, large farm entities across the state will be participating in the Good Neighbor Program, reporting use of restricted use pesticides to the Department on a monthly basis. Also, contrary to language in this bill, those farming operations participating in the current Kauai Agricultural Good Neighbor Program have, voluntarily, released their RUP spray amounts to the Department by the 15th of the following month in which they were used. The amounts applied are then posted on the Department website, refuting the claim that records are "…only published on the department's website months after the reported pesticide applications". The Department recommends allowing the state's voluntary program time to become established in order to address the reporting aspect of this bill.

Thank you for the opportunity to present testimony.

WPHA
Western Plant Health Association

Protection

Members of the Joint Agriculture
Committee and Energy and
Environmental Protection
Committee

RE: HB 790; RELATING TO ENVIRONMENTAL PROTECTION (OPPOSE)

Dear Chairman Creagan, Chairman Lee and Members of the Joint Committee:

On behalf of the Western Plant Health Association (WPHA), I am writing in opposition to HB 790, which would require the establishment of the "Kauai Good Neighbor Agreement" as a mandatory statewide program, establish disclosure and public notification of outdoor applications of pesticides around schools and establish a pilot program of vegetative buffers around selected schools in the state. WPHA represents the interests of fertilizer and pesticide manufacturers, agricultural biotechnology providers, and agricultural retailers in Hawaii, California, and Arizona.

WPHA appreciates the author's interest in assuring the safety of schools; however, we believe this bill is unnecessary, and will result in additional costs to farmers and the state. The bill would impact commercial agricultural operations that propagate crops adjacent to a designated school.

WPHA supports the expansion of the good neighbor program to a voluntary statewide program. We believe before the program is considered as a mandatory program it should be allowed to mature as a statewide voluntary program to determine the strengths and weaknesses of the program at that level. On a statewide basis, there may be components of the program that should be eliminated for some participants, or potentially expanded. Providing time for the program to mature as a voluntary program will allow the Hawaii Department of Agriculture (HDOA) to make those determinations. before committing the program to a structure by statute.

4460 Duckhorn Drive, Suite A, Sacramento, CA 95834 * Phone: 916.574.9744 * Fax: 916.574.9484 * **www.healthyplants.org**

Establishing disclosure and notification requirements for applications of pesticides beyond what is already mandated by the product label is a costly and unnecessary burden to place on farmers. If the program is going to be expanded to a statewide program and the goal is to protect all sensitive populations, the program will have to expand to include all farmers or the information the program is intending to collect will be incomplete, and therefore invalid from the program's inception. The cost of disclosing product information and public notification will substantially increase operational cost to farmers. WPHA would note, that only one state in the United States has implemented such a program because of the prohibitive costs to farmers and the state. WPHA believes that this will be true for Hawaii, especially when you consider the structure of the program will collect limited data that will not be useful.

WPHA would strongly suggest that if the state is concerned that parents of children should be notified of the use of pesticide products that children may be exposed to, then require schools to post applications and notify parents in advance. The likelihood of exposures is more likely through school use. Perhaps a more useful pilot project could be for schools to undertake this effort, which could then be a useful evaluation of costs.

There is little evidence to support the premise that safeguards from pesticide exposure are needed through additional buffers. Pesticide registrants who provide products used around sensitive population centers must provide United States Environmental Protection Agency (USEPA) proof of their safety through multiple exposure scenario studies specific to these settings. These rigorous studies are designed by the USEPA to ensure safe use protocols are developed. USEPA specifically establishes use requirements in recognition of use in these settings. If USEPA's scientific analysis results in a determination that buffers or use restrictions are needed to protect surrounding communities or sensitive populations, then USEPA requires these measures as part of the product label. The stringent application protocols require farmers and applicators to provide these safeguards.

These safeguards are effective. Last year, the Hawaii Department of Agriculture (HDOA) conducted an analysis of school related pesticide complaints for approximately the prior ten years. Through this analysis, it was determined that allegations of pesticide exposure causing widespread harm are inaccurate. The report clearly demonstrated that all but one complaint (that involved a turf operation) were from home use products. According to HDOA, there have been **no drift incidents in Hawaii** impacting schools from any farms including large-scale agricultural operations.

The proposed buffer program would do nothing to protect schools from what appears to be the real threat, misapplication of products from home owners. If the goal is true protection, then will home owners be required to discontinue the use of products at their homes and establish state mandated vegetative buffers if they border a school? Again, if the goal is to protect sensitive population groups, then shouldn't all sectors of Hawaii's population participate?

WPHA believes a better use of state resources would be to provide additional funding to University Extension agents and HDOA to provide additional education and training to farmers on useful IPM systems, and other users on safe handling and application of

products. We believe that to avoid unintended consequences from prematurely mandating that the good neighbor program be implemented by statute, a period be allowed for the development and implementation of the program on a statewide basis.

WPHA is opposed to "**149A-G - Authority of local government"** which would provide local municipalities the authority to establish their own standards of pesticide regulation, thereby eroding state preemption. State law controls the regulation of pesticide products and use in Hawaii. This bill would erode state preemption of pesticide laws with respect to two pesticides. WPHA opposes the erosion of repeal of pesticide preemption. Without a unified state policy, farms will face increased pest pressures from uneven standards implemented by counties in the regulation of pesticide products. We believe the following are important components of preemption which must be fully considered

- Safe, effective and scientifically sound pesticide regulation.
- A system of pesticide regulation which is consistent, coordinated, and comports with both Federal and state technical expertise which is essential to public health and safety. Local regulation of pesticides does not materially assist in achieving these goals.
- The local regulation of the use of these products is costly, unnecessary, and interferes with the application of Integrated Pest Management.
- Local pesticide bans/restrictions hinder the control of pests that have a detrimental effect on healthy turf, trees and ornamentals which is important to Hawaii's economy.
- Local pesticide bans will require the use of additional resources for investigation of violations and enforcement, creating an unnecessary drain on community funds.
- State preemption is particularly important in states where new invasive pests can be introduced through avenues like tourism, and can spread quickly.
- The individual setting of pest control laws and regulations will result in counties having to increase the use of pesticides as well as incurring additional costs to protect their county from increased pest pressures.

The establishment of safeguards like pesticide preemption is an important tool for states to ensure all their citizens equal protection against invasive plant or animal species, disease carrying pests, and the local drain of resources due to the activities of other municipalities. Protection against these risks must be coordinated through a state entity that has the scientific capability to address these issues effectively.

WPHA opposes the expansion of the good neighbor agreement to a mandatory statewide program. We believe it is in the best interest of the state to provide time for the program to mature and so the state may more effectively evaluate the strengths or weaknesses of the voluntary program. WPHA opposes the erosion of state preemption contained in this bill. For these reasons WPHA **opposes** HB 790 and asks the committees for a **no** vote. We thank you for your consideration of our comments.

Sincerely,

Renee Pinel

TESTIMONY FROM BENNETTE MISALUCHA, EXECUTIVE DIRECTOR

In Opposition to HB 790
Relating to Environmental Protection
Establishes pesticide disclosure and public notification requirements for large-scale, outdoor commercial agricultural operations

HOUSE COMMITTEE ON ENERGY & ENVIRONMENTAL PROTECTION
AND HOUSE COMMITTEE ON AGRICULTURE
February 7, 2017, 9:00 a.m.
Conference Room 325

Chairs Lee and Creagan and members of the committees:

HCIA is a Hawaii-based non-profit organization that promotes modern agriculture to help farmers and communities succeed. Through education, collaboration, and advocacy, we work to ensure a safe and sustainable food supply, support responsible farming practices, and build a healthy economy.

HCIA stands in opposition to HB 790, which establishes disclosure and public notification requirements for outdoor application of pesticides in various sensitive areas or by large-scale, outdoor commercial agricultural operations.

We oppose HB 790 because it indiscriminately targets agriculture and large-scale, outdoor commercial agricultural operations despite the fact that agriculture accounts for only about one-third of RUP use in Hawaii. According to the Hawaii Department of Agriculture's 2015 pesticide study, seed companies that operate in Hawaii account for less than 5 percent of RUPs. The bill also seems to ignore recent studies conducted by the Department of Health and the Department of Agriculture which underscore that pesticide use in agriculture is not the cause of incidences related to school evacuations or surface water contaminations.

HCIA and its member companies take the issue of pesticide seriously. We care about the safety of our communities and employees, and our member companies expend a lot of resources to train their employees on safe pesticide use.

Our member companies are already and willing to be good neighbors. On Kauai, our member companies have been voluntarily disclosing their pesticide use through the Kauai Good Neighbor Program for a number of years. They have also agreed to participate in a statewide version of the voluntary program announced last year by the Hawaii Department of Agriculture that will be unique to each of the farms. It cannot be a one-size-fits-all approach, as different varia-bles need to be taken into account for each individual farm. And, the program should remain voluntary so as not to impact other agricultural operations with unintended consequences.

Rather than create new and arbitrary laws that will make it more difficult for farmers to stay in business in Hawaii, we support the concepts in other pesticide-related bills introduced this session, such as HB 1017, that would give the Hawaii Department of Agriculture increased funding and capacity to more effectively perform their roles, including pesticide education. We believe that a strong state pesticide regulatory program is essential to assuring the public that pesticide products are used properly.

Thank you for the opportunity to submit testimony in opposition of HB 790.

Respectfully submitted,

Bennette Misalucha

Comments: Progressive Democrats of Hawaii has been supporting progressive issues and policies in Hawaii and Nationally for fifteen years. We are proud to have been on the right side of history. We believe it is essential that sprayers of pesticides be required to take all reasonable precautions in notifying people and government agencies when they are going to be using pesticides in the vicinity of human activity. This should be a "no brainer." Alas, it is not, evidently. PDH strongly supports this bill.

HAWAIʻI CENTER FOR FOOD SAFETY

House Committee on Energy & Environmental Protection and Committee on Agriculture

Hawaiʻi Center for Food Safety <u>strongly supports</u>: HB790

Dear Chair Lee, Vice Chair Lowen, Chair Creagan, Vice Chair DeCoite and Members of the Both Committees,

My name is Dr. Ashley Lukens and I am the Hawaiʻi Director for the Center for Food Safety (CFS). CFS is a nationwide public interest, sustainable agriculture nonprofit organization whose mission centers on furthering the public's right to know how their food is produced, through labeling and other means. We have over 800,000 farmer and consumer members across the country, including nearing 10,000 in Hawaiʻi. On behalf of CFS and our members, I thank you for the opportunity to speak to you today regarding this important bill.

CFS has been dedicated to addressing the human health and environmental impacts of our increased reliance on pesticide use in agriculture, both in the State of Hawaiʻi and nationally. We were instrumental in providing legal and communications support in the passage of numerous ordinances relating to pesticide use and disclosure, such as Kauaʻi's Bill 2491. Since 2014, as the inaugural director here in Hawaiʻi, I have worked closely with community members across the state, in all counties, and have played an instrumental role in the passage of Maui's moratorium on GE production until companies submit environmental and public health impact assessments.

I am also a former adjunct professor of Political Science at UH Mānoa and UH West Oʻahu, where I have taught classes on food, agriculture, and policy from 2006-2014.

I am writing in strong support of HB790, which requires that the state protect keiki and kupuna health by requiring notification and disclosure of toxic restricted-use pesticides around sensitive areas like schools.

Modeled after the "Kauai Good Neighbor Program," this voluntary program was recently "expanded" by the Department of Agriculture so that companies operating on Oahu, Molokai, and Maui will have better access to data on pesticide use. To note, both KGNP and its yet-launched expansion are voluntary programs. Although a good stepping-stone, voluntary programs are an unreliable compromise to mandatory disclosure. The data is not verified by any party nor mandatory for timely submission which leads to uncertainty at the validity of reporting.

office@centerforfoodsafety.org centerforfoodsafety.org

Despite these shorecomings the The Kauai Good Neighbor Program data reports that, Kauaʻi Good Neighbor Program data show that, between December 2013 to November 2016, 6,121.3 gallons and 5,102.34 pounds of concentrated restricted use pesticides were applied on Kauaʻi by the five participating companies (Syngenta, DuPont-Pioneer, Dow AgroSciences, BASF and Kauaʻi Coffee). The companies applied these restricted use pesticides to some portion of the **12,500 acres** they own or lease on Kauaʻi. However, this program does not provide site-specific information regarding where the various restricted use pesticides were applied.

This measure, by mandating the timely disclosure of pesticide information to communities, acknowledges to the community's right to know about the chemicals applied where they live, work, and play, and takes seriously the need to put this requirement into statue so that the community feels the government is playing its proper regulatory role.

It is here that I want to distinguish acute exposure from chronic exposure and discuss the different regulatory burden of each. Recent Department of Agriculture initiatives to address community concerns about the risks of pesticides are designed to address pesticide "incidents" – that is, one-time (acute) exposure to large amounts of a pesticide, resulting in nausea, vomiting, difficulty breathing, and similar symptoms. These incidents are important and headline-grabbing. In 2016, 10 Syngenta field workers were hostptialized on Kauai after being exposed to chlorpyrifos – an insecticide so toxic that the U.S. Environmental Protection Agency banned home uses 15 years ago, and early this year proposed to prohibit farm spraying as well. We also know of the many schoolchildren sickened in various pesticide drift incidents at Waimea Canyon Middle School, including some sent to the emergency room. And it's not just Kauaʻi. Dozens of students and staff were sickened by off-school use of chemicals (most likely pesticides) at Kahuluʻu Elementary School. These are just a few of many pesticide poisoning incidents that have occurred in the state. Many more likely go unreported.

We know acute exposure to pesticides is a problem, and that in some cases it can lead to lasting health impairment. So the state's initiatives to educate homeowners about pesticide use, form rapid-response teams to better respond to pesticide poisoning episodes, and educate physicians to recognize symptoms of pesticide poisoning, are all welcome. But they are far from being enough. **This is because the recent DOA initiatives do nothing to address the disease burden from chronic exposure to pesticides, as documented in the medical literature.**

I cannot stress enough that mitigating potential chronic exposure through disclosure and notification takes a precautionary approach towards protecting the future of our keiki by providing doctors and the community with the necessary data they need to determine if adverse health outcomes in Waimea are linked to increased pesticide use by the GE Seed industry. Children can be exposed to pesticides applied on school grounds, pesticides that drift

onto school grounds from neighboring agricultural lands, or from pesticide residues.[1,2] **It is critical that the state take action to reduce childhood pesticide exposure because toxic exposure to pesticides during fetal,[3] neonatal,[4] and infant life can disrupt critical developmental processes.[5]** Early life pesticide exposure has been linked to long-term health effects including cancer,[6] decreased cognitive function,[7,8,9] behavior problems,[10,11] birth defects and other adverse birth outcomes,[12,13] and asthma.[14]

Specifically, according to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to restricted

used pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD[15,16,17,18], leukemia[19,20,21], and asthma[22,23,24].

Chronic exposure is the expected outcome when a company sprays pesticides year-round, two of three days, up to 16 times a day, as is done for example by DuPont on Kaua'i.[i]
Exposure is all the more likely under windy conditions (spray drift) and when it's still and hot (vapor drift). Although spraying is often officially prohibited under such conditions by on-label warnings, there is abundant evidence that it occurs, and occurs frequently, nonetheless.[ii] Pesticides can drift onto children playing out of doors, and can even infiltrate homes and classrooms.[iii]

Chronic exposure to pesticides is not effectively mitigated by forming interagency rapid-response teams, educating homeowners, or resolving discrepancies in birth defects registries. Lessening exposure to pesticides requires full implementation of the measures recommended by the Joint Fact-Finding Study Group (JFF), a committee of experts that undertook a year-long

investigation of the impacts of pesticide use by the GE seed industry and Kauaʻi Coffee on Kauaʻi. The JFF recommended that Governor David Ige and state agencies "undertake a major update to Hawai'i's pesticide laws and regulations." Recommendations included setting lower exposure limits for chronic exposure to hazardous pesticides; mandatory public disclosure of pesticide use by all large users; and establishment of a consistent, no-spray buffer zone policy around schools and other institutions where people congregate. HB790 is therefore a critical first step in ensuring that the State protect our keiki.

Last week, at a Senate Hearing on a similar measure, Dr. Lee Evslin, a member of the Kauai Joint Fact Finding Group testified:

> "We found the Westside community to be one the least healthy communities in the state by many health measures. Our concern was heightened by increases in developmental disorders in children in these Westside Communities as compared to the other communities on Kauai. We also very clearly pointed out that due to the small population and the virtual lack of any environmental or biologic monitoring, we could not say with any certainty what was causing these adverse health findings. Our conclusion was that if any community in Hawaii wanted to really know if they are being affected by pesticide exposure there needs to be adequate testing of the environment and the population for pesticide exposure. This monitoring should be funded and there should be oversight and coordination of these studies and other efforts by a balanced, science- oriented pesticide committee."

Indeed, the direct, indirect, and cumulative impacts on public health regarding the long-term intensive commercial agriculture and associated use of pesticides have not been properly or independently evaluated. Existing federal and state oversight of pesticide exposure do not take into account chronic exposure to local pesticide use. Information pertaining to the intensive use of pesticides in large-scale commercial agriculture within the State is not readily available to the public. Thus, the public is unable to evaluate the full extent of negative impacts accruing to the residents and environment of Hawai'i.

The people of Hawai'i have the right to decide that the risks associated with the use of toxic pesticides in commercial agriculture are unacceptable, and take action to reduce and prevent the potential negative impacts of such use. Mandatory public disclosure of pesticide use, given the pesticide practices of the growing GE Seed Industry in Hawaii is a common sense next step in ensuring that the health of our communities is not sacrificed for industry profit.

Thank you for this opportunity to provide testimony, and I am happy to provide further analysis or respond to any follow-up questions from the Committee.

Respectfully,

Ashley Lukens, PhD
Director, Hawaii Center for Food Safety

Submitted By	Organization	Testifier Position	Present at Hearing
Joan Kutzer	Hawaii Nurses Association, OPEIU local 50	Support	Yes

Comments: Hawaii Nurses Association is in strong support of HB 790. As a nurse I am very concerned about the effects of pesticide exposure on the health of my community. The Kauai Joint Fact Finding study Group found that the State regulations fail to protect the people of our state. The residents of the West side of Kauai suffer from higher rates of adverse health conditions than the rest of Kauai. We need to establish buffer zones state wide; expand on the "Good Neighbor program"; establish state standards for exposure; and Evaluate and recommend specific changes to the State's pesticide laws and regulations. Please vote in favor of HB790. Joan Kutzer, RN, Hawaii Nurses Association Board of Directors

TO: Honorable Chairs Lee and Creagan and Members of their Committees

RE: HB 790 Relating to Environmental Protection
Support for hearing on Feb. 7

Americans for Democratic Action is an organization founded in the 1950s by leading supporters of the New Deal and led by Patsy Mink in the 1970s. We are devoted to the promotion of progressive public policies.

We support HB 790 as it would require disclosure and public notification for outdoor application of pesticides in various sensitive areas or by large-scale, outdoor commercial agricultural operations. It seems common sense to disclose. The bill perhaps should go further and prohibit the use of pesticides near schools and hospitals.

Thank you for your consideration.

Sincerely,

John Bickel
President

House Committee on Energy & Environmental Protection

Hawai'i Alliance for Progressive Action strongly supports: HB790

Dear Chair Lee, Vice Chair Lowen and Members of the Committees,

My name is Anne Frederick and I am the Executive Director for the Hawai'i Alliance for Progressive Action (HAPA). HAPA is a statewide environmental, social and economic justice organization. HAPA emerged out of the community-led movement on Kaua'i to enact greater regulations around pesticide use and disclosure, which led to the passage of Bill 2491. HAPA's fair and sustainable food systems work focuses on protecting Hawai'i's environment and the health of its residents from the potentially harmful pesticide impacts. HAPA engages over 10,000 local residents annually through our work.

I am writing in strong support of HB 790.

This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

The Hawai'i Alliance for Progressive Action (HAPA) is a public non-profit organization under Section 501(c)(3) of the Internal Revenue Code. HAPA's mission is to catalyze community empowerment and systemic change towards valuing 'aina (environment) and people ahead of corporate profit.

HAWAI'I ALLIANCE for PROGRESSIVE ACTION

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

In 2016 HAPA circulated a 4 point petition and collected signatures from 2,628 Hawai'i resident's calling on State Legislator's to "require full disclosure of pesticide use by the largest users of restricted use pesticides", The signed petition is attached for your review.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Respectfully,

Anne Frederick, Executive Director
Hawai'i Alliance for Progressive Action

HAPA
HAWAIʻI ALLIANCE *for* PROGRESSIVE ACTION

To: Governor Ige, Hawai`i State Legislators, and the Hawai`i Depts. of Agriculture and Health

From: [Your Name]

We the undersigned Hawai`i residents hereby demand that our State and County government leaders (via executive order, rule making authority or by legislative action) immediately:

1. Ban the use of all products containing the ingredient chlorpyrifos;

2. Require full disclosure of pesticide use by largest users of restricted use pesticides;

3. Require pesticide free 'protection zones' around all schools, hospitals, and homes;

4. Acknowledge and preserve the 'home rule' rights of County governments to protect the health and environment of their citizens.*

It is government's duty to protect Hawai`i's people and environment over the corporate interests of multinational corporations who are using Hawai`i's resources for their financial gain.

We demand action now on behalf of the `āina, and current and future generations.

(See attached signatures from 2,628 Hawaiʻi residents)

**please note: petition was circulated prior to 9th circuit court ruling*

Re: Support for HB 790

Pesticide Action Network North America is a national & international organization with over 2,000 members in Hawai'i. On behalf of our members, we are here to express strong support of HB 790. We believe pesticide use disclosure is critical to protect public health as well as the local food system, which can be adversely impacted by pesticide drift and overuse.

Without adequate data about when and where pesticides are applied, potential harms to water, soil, neighboring, communities, and farms are unknown. It is also difficult for policymakers to make informed decisions without publicly accessible data about pesticide use. A pesticide use reporting system helps to foster good neighbor relations and open dialogue, and allows policymakers to put rules in place that protect particularly sensitive crops and communities, such as young children and the elderly. It also helps map use trends and measure the on-the-ground impacts of public policies over time, and provides important data to public health researchers.

Eleven states and the District of Columbia currently have pesticide use reporting programs in place, and the state of Maryland is considering establishment of a new program. California and New York have the most longstanding programs, established in 1990 and 1996 respectively. These programs show that such policies are both viable and useful. Both require mandatory reporting for agricultural applications, and maintain searchable online databases allowing public access to customized information based on date, location and product used. There are approximately 2.4 million pesticide application reports per year in California's system, and this data has been extremely useful to the state. For example, the CA Department of Public Health published a report in 2014 based on this data, and this report has subsequently been used by state policymakers to make important policy decisions.

While programs like the Kaui good neighbor program might be lauded, the facts show that voluntary programs do not lead to significant benefits, and are not comparable to mandatory pesticide use reporting. We respectfully urge the representatives to support this legislation in order to protect vulnerable communities and the local food system, and to put better data into the hands of policymakers and neighboring communities.

Comments: This is critical information for residents on our island, Kauai, especially, given the large amounts of spraying that is done. Mahalo

Hearing for HB790

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

My name is Seri Niimi-Burch and I am a resident of Honoka'a, Hawai'i. I am writing to urge your strong support of HB790 to require that the state protect our people's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, environmentally sensitive areas and other places where the people most vulnerable to pesticide exposure, keiki and kupuna, live, spend time and play.

This is important to me because I grew up on Kaua'i and attended public schools from grade 1-12 and I was not protected by the state from toxic pesticides during these foundational years of my life that will influence my health for the rest of my life. I worry about the long term impacts pesticide application at my schools may have on my body and life, but I worry more about the impact they continue to have on my family, including two nieces and a nephew under the age of ten, my community and our fragile island home. I ask you to grant them the kind of protection from pesticides my generation, and yours, was denied. Our keiki deserve to learn and grow in a safe environment devoid of pesticide application and drift.

We all deserve to know exactly what is in their air we breathe, who is spraying it, how much, when and where not only so that we can take necessary precautions to avoid health impacts, but also so that doctors and other health professionals can better identify links between pesticide exposure and illness. When these relationships are better understood, public health efforts can better address them, responsible entities can be held more accountable and a safer environment for all can be created. Actually, we all deserve to breathe air that is not harmful to our health, but if the state is going to allow companies to spew toxic chemicals into our air, soil and water, it must require that they be as transparent. Your job as the government is to protect the people and the 'aina from those corporations, not the corporations from the people.

Mahalo for considering my testimony in strong support of this measure.

Seri Niimi-Burch
44-2612 Kalopa Mauka Rd.
Honoka'a HI 96727
808-634-7134

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

I am writing to urge your strong support of HB 790. Please pass this common sense measure that would protect our most vulnerable from the effects of pesticide spraying.

This bill gives our communities advance notice so that those most sensitive can take measures to protect themselves.

It would also provide a means to more firmly establish which pesticides may be causing actual damage in our communities. Companies operating safely should have no objection to this.

Voluntary notification is inadequate.

Beth McDermott
Manoa resident

Comments: Please, at the very least, protect the people from these poisons by at least making sure we know what is being sprayed when and where. Mahalo

Comments: Aloha: As a citizen of Maui county, I support this measure. My 7 year old son attends Kamali'i elementary school and has asthma and allergies. The official nurse at Kamalii elementary school told us that she has never seen the current amount of Asthma and allergies in kids at the school in her whole 20 year career. I want to know more about what is happening, and to take measures to protect our community. Kamali'i elementary school is less than 1 mile downwind from one of Monsanto's testing fields in Kihei. We have a right to know what is being put into the air we breathe. I also support total containment of GMO testing. To allow GMO testing in open air in this precious environment is playing with fire. If something goes wrong, it could alter and even destroy the ecosystem we currently appreciate in the state of Hawaii. If they want to test, fine, but under complete indoor containment. The risk poses a unknown effect to our entire population. Thank you Andrew Huey

Comments: Please support the state requirement for pesticide disclosure. Kauai‘s passionate plea for knowledge of which chemicals are being sprayed in their areas where the agriculture fields are ever-present in close proximity to living spaces along our basic one road around the island‘s edge. Many people live with the anxiety that they are in chronic exposure to low-levels of the pesticides on the wind, in the water and the dust that settles around them. The courts have determined this is the state‘s responsibility, so the state must rise to responsibility to place greater protection of the people‘s health than the international corporations‘ formula privacies. Felicia Cowden Kilauea, Kauai

Comments: I strongly urge support for this bill that would provide information on the spraying of pesticides prior to and during their application to the public, especially to those potentially most sensitive to their use. I will be interested to see how the blanks in the bill are filled in and urge maximum protection to children, the elderly, and those in health care facilities.

Please note that testimony submitted less than 24 hours prior to the hearing, improperly identified, or directed to the incorrect office, may not be posted online or distributed to the committee prior to the convening of the public hearing.

Michaels testimony HB790

I support this Bill to establish disclosure and public notification requirements for the outdoor application or pesticides in defined sensitive areas and by large-scale outdoor commercial agricultural operations.

These are but one of the many steps the State must take to properly regulate the use of these highly dangerous toxic poisons in order to protect the health of the people and of the environment. The measures proposed in this Bill are good starting points, and properly used along with other studies and the keeping of health records including of chronic and acute pesticide poisonings, will help generate sound scientific information about the impacts of pesticide use.

The State should expand the scope of this Bill to include all institutions of higher learning, since I can think of no sound reason that young adults and their teachers should not be accorded the same protections as younger children.

When it comes time to insert the minimum amounts of pesticides in sections 149A-B and 149A-C, I urge State legislators to adopt very low weights/volumes – because all pesticide uses contribute to the cumulative pesticide loading in each area, and because all restricted use pesticides are by definition highly toxic (else why classified as restricted use?).

Because many pesticides are known to volitalize, their spread well outside the application area will occur. For this reason, notification must be made to all occupants and residents of sensitive areas located within no less than ½ mile of the boundary of the application area.

I strongly support section 194A-G – which will grant local governments the right to impose equivalent or more rigorous standards in terms of regulating pesticide disclosure, notification and use, including establishment of buffer zones.

If Section 3 grandparents or carries forward rights or duties that matured or proceedings that were begun before the effective date of this Bill, then I urge that it be deleted, particularly if its retention means that the application of the intent and measures outlined in this Bill will be constrained.

Michael Coon, M.Sc.

Comments: This is sich a no brainer. We need these buffer zines and we need to know what chemicals are being sprayed. The only reason for objection would be how upset people might be when they actually know how their soul, air and bodies are being poisoned.

Comments: Please support HB790 so that Hawaii's agribusinesses have to disclose and notify before the application of pesticides. Community members want to know when and what agribusinesses are spraying. This bill doesn't stop them from spraying, it just requires disclosure and notification. This should not hurt the agribusinesses if they are acting responsibly.

Comments: Aloha. My name is Camila Chaudron, and I live in the Manoa/Makiki area. I support this measure because the public has a right to health and safety, but if pesticides are being used in our shared environment, then this right is being unfairly infringed upon. At the very least, we should know what is happening so we can protect ourselves and advocate against these harmful pesticides. For the sake of the health and future of our community, thank you for supporting this measure. Mahalo.

Comments: I am in support of this bill and would like to see it implemented and enforced. The public, especially those more vulnerable to chemicals should have the awareness of what chemicals are being used in close proximity to them as well as have the choice to not reside in the area when the chemicals are being used which would require notifying parties prior to using these chemicals. I believe there should more then 24hrs advanced noticed, at least 48 hrs if not more. Also I believe along with posting when chemicals are being used(how big is the postings?) emails phone calls or other means of advance warnings should be required. Mahalo

Aloha Chair Lee, Chair Creagan and Committee Members,

I am testifying in strong support of HB790 establishing mandatory pesticide disclosure requirements for the very largest users of Restricted Use Pesticides in Hawaii. HB790 is in alignment with the recommendations of the State sponsored Joint Fact Finding (JFF) report and I applaud the committee for its effort in implementing these reccomendations.

The State/County sponsored Joint Fact Finding (JFF) group did an exhaustive 18 month review of existing health and pesticide data on Kauai and issued its report in 2016.

The data gathered during the JFF process indicate that Kauai west side residents who live in communities adjacent to large commercial agricultural operations suffer from numerous health conditions at higher rates than residents living anywhere else on Kauai.

These health conditions/indicators include: Developmental Delay (3 to 8 year olds), ADHD, Easter Seals Enrollment (age 0 to 3), Infant Mortality, Mothers Pre-Existing Health Conditions, Cancer Mortality, Stroke Mortality, Admissions for Bacterial Pneumonia, COPD or Asthma (elderly), Dialysis Patients (per 1,000) and other disabilities.

National studies also support the findings that all of these health conditions can be associated with pesticide exposure and that pesticide applicators and those living and working in areas with heavy pesticide use are likely to suffer from these conditions (and others) in greater numbers than the general population.

To be clear when discussing the health data on Kauai we are dealing with small numbers, statistical significance is thus impossible to determine with any certainty and the exact cause of these elevated rates has not been determined. Comprehensive testing is needed to determine the degree of pesticide drift that is occurring and the degree of health and environmental impacts, and <u>such testing cannot be effectively completed without full disclosure of what activities are occurring and what specific chemicals are being sprayed and where</u>.

Further - Residents who live in communities in the vicinity of these large commercial operations are entitled to know what is being sprayed and

when, so they can take appropriate action to protect their personal health. Pregnant women, young children and the elderly are particularly at risk and should have the option of avoiding the areas being treated and taking other measures to minimize exposure to the pesticide drift we know is occurring. Without mandatory disclosure this is not possible.

This is why it is critically important that HB790 be passed and the additional recommendations put forward by the JFF report actually be funded and implemented by the State. The comprehensive and regular testing of soil, air and water is also an essential factor needed to determine the potential health risk associated with the pesticide use and drift that we know is occurring.

HB790 is a critical component necessary in fulfilling the objectives and recommendations contained within the State sponsored Joint Fact Finding (JFF) report and I strongly encourage this committee to pass this measure and other related measures today.

Thank you,

Gary Hooser
Private Citizen

Lynn B. Wilson, PhD	Individual	Support	No

Comments: Dear Chair Lee, Vice Chair Lowen and Members of the Committee, My name is Lynn B. Wilson, and I have focused research on the impact of environmental toxins and agrochemical pesticides on young children for many years, working primarily with the pediatric and early childhood communities. I am writing in strong support of HB790. The importance of this bill is underscored by the American Academy of Pediatrics report and policy statements on pesticides: with a 400% increase in childhood chronic diseases over the past 50 years, we need to REDUCE the RISK OF EXPOSURE for pregnant women and young children. Hawai'i's communities have no choice but to live, work, and commute daily in areas under threat of toxic pesticide drift – and we do not yet have access to detailed information that will allow us to protect ourselves from this vital threat. Children in utero and early childhood who are exposed to low-level restricted use pesticides are at higher risk of neurodevelopmental disabilities like autism and ADHD, and leukemia and asthma as well as other adult onset cancers. With agrichemical companies spraying 2 out of every 3 days of every year and with these companies using experimental combinations of pesticides that have not been evaluated by health researchers, mandatory public disclosure will ensure that industrial agriculture is held responsible for the potential impacts of its pesticides on the health of our families, our communities, and the environment. Thank you for considering my testimony, passing this bill will go a long way to protect Hawaii's keiki. Mahalo + Aloha, Lynn B. Wilson, PhD Waipahu, HI

Comments: THIS IS THE MOST IMPORTANT TIME IN OUR HISTORY OF MANKIND.....& HAWAII..... TO BECOME THE VOICE OUR DEMOCRACY...(is a system of government in which the citizens exercise power directly or elect representatives from among themselves to form "THE VOICE OF THE PEOPLE"... WE DEFIANTLY NEED TO "STOP"...THE "POWER AND THE CORRUPTION" CAUSED BY THESE CORRUPTED BY MONEY CORPORATIONS.... HAWAII is at a threshold....."ALLOWING MORE & MORE POISONS"...(the corporations call pesticides & herbicides)...to POLLUTE & DESTROY our daily lives has to END now...!! Its finally time to END the "OPEN AIR" EXPERIMENTING" on our lives and the Aina..... Poison (a substance with an inherent property that tends to "DESTROY LIFE".. or impair health.) THESE CORPORATIONS ARE TAKING "MONETARY ADVANTAGE" OVER OUR LIVES AND WE IN HAWAII....DEMAND THIS TO FINALLY END...!! SINCERELY DONNIE BECKER MAUI, HAWAII.

Theresa Freund	Individual	Support	Yes

Comments: Dear Chair Lee, Vice Chair Lowen and Members of the Committee, My name is Theresa Freund and I live in Nuuanu. I am very much concerned about the high amounts of pesticide being sprayed in Hawaii and its effects on our health and especially children's health. Therefore I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas. I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma. Currently there are at least 27 schools in Hawai‘i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space. Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua‘i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid. Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Comments: Aloha Chair and Committee Members, This law is long overdue. Agribusinesses are applying pesticides with out letting people know what they are and that they could be unwittingly exposed to them. I see crops sprayed near to Kam Hwy. between Wahiawa and Haleiwa and it's often at night when you can't see them and don't know what's happening until you are driving by breathing it in! My son went to Wailua Intermediate and High and they were regularly subjected to pesticide drift. I have taken him out of school and he is homeschooled now. Please see to it that these companies disclose what they are releasing onto our land and into our water and air. Thank you!

Comments: Aloha to the Agriculture and Energy and Environmental Protection Committees; I am writing to express I and my family's strong support for HB790. We are residents of Kaua'i and have seen first hand the problems that result from unregulated and undisclosed spraying near schools, hospitals, and residential neighborhoods. It is critical and very reasonable to require large ag operations to avoid spraying in areas surrounding these sensitive locations, and to disclose the times of spraying and substances used. These are simply respectful, good neighbor behaviors that any business should be happy to cooperate with. Thank you for considering my testimony on behalf of all people in our beloved Hawai'i. Sincerely, Maria Walker PO Box 33 Kapa'a, HI 96746

Madeline Reed
Attorney at Law
PO Box 437285
Kamuela, HI 96743
(808) 887-0088

STATE OF HAWAI`I HOUSE OF REPRESENTATIVES
COMMITTEE ON ENERGY & ENVIRONMENTAL PROTECTION
COMMITTEE ON AGRICULTURE

RE: Strong Support for HB 790

Dear Chairs Lee and Creagan, and Vice Chairs Lowen and DeCoite, and Members of the Committees:

My name is Madeline Reed, and I am a resident of Kamuela, on Hawai`i Island. I am writing to **urge your strong support of HB 790**. As recent events have proven – the people of the neighbor islands want accountability from the multi-national corporations using the land in our communities. And as we have seen in the past year, **we need the state legislature to protect us**, because our best efforts to protect ourselves at the county level have failed.

As a mother and a legal advocate for children, I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki. I believe a bill such as this one is necessary because I have zero faith that voluntary reporting requirements are effective. **I simply do not trust these corporations** who operate in our back yards.

I hope you will prioritize the health and wellbeing of the people of the state over the pressure you are undoubtably receiving from rich and powerful business interests. And if you think about it, this bill should be a no-brainer. Because honestly, if you guys can't keep multi-national corporations from basically spraying poison on our children, maybe you should all just go home.

Thank you for your consideration and for the work that you do,

Madeline M. Reed

To the Honorable House Members:

I support HB 790: Statewide Pesticide Disclosure & Public Notification for Hawai‘i

Companies like Monsanto and Syngenta are not required to disclose the pesticides they spray.There is nothing more important than the health and safety of our ohana, which is why we must demand that these agrichemical companies “Just Say What You Spray and Give Us Space.”

HB 790 will establish the state’s first mandatory pesticide disclosure program; it will establish public notification requirements when pesticides are sprayed in proximity of schools, healthcare facilities, child care facilities, elder care facilities, and other environmentally sensitive areas.

This is vitally important because Hawai‘i’s communities have no choice but to live, work, and commute daily in areas under threat of toxic pesticide drift –and they do not have access to information that would allow them to protect themselves from this vital threat.

Children in utero and early childhood who are exposed to low-level restricted use pesticides are at risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

With agrichemical companies spraying 2 out of every 3 days, mandatory public disclosure will ensure that industrial agriculture is held responsible for the potential impacts of its pesticides on human health and the environment.

Thank you for your support of this important law.

Mahalo,

Terry Huth

While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Support HB 790!

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Support HB 790!

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Re: HB 790 Environmental Protection

To Whom It May Concern:

I support HB 790 to protect children, human health and the environment with the additions proposed in the bill for mandatory disclosure of pesticides.

How is secretly giving someone a date-rape drug different from poisoning water or soil with undisclosed pesticides?

Please vote for HB 790.

Yours sincerely,

Denise Boisvert

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Support HB 790!

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Testimony letter in Support of HB 790

February 6, 2017

Dear Chair Lee, Vice Chair Lowen, and Members of the Committee,

My name is Patti Hawkins and I am a resident of Haiku, Maui. (1350 Kaupakalua Road) I am writing you to support HB 790. Please protect all of our children and grandchildren from having their lungs become petri dishes for the chemical companies, which spray hazardous toxic pesticides near schools and healthcare facilities. We all do the best we can to stay healthy shouldn't we hold corporations to the same standard? We are so blessed to live in Hawaii surrounded by beauty and air that moves through the trades, please allow this clean air to not become polluted by companies that only care for profit and not for Hawaii and it's people.

Please protect yourselves, ourselves, our children and the future generations of Hawaii, it is your responsibility as members of this committee to be our advocates.

Thank you , Patti hawkins

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Support HB 790!

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua 'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our communities. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Support HB 790!

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

The air we breathe free from harmful toxic pesticides is a Human Right. time to step in and represent the right of all of us to a life free of disease promoting substances because chemical companies want to profit from their irresponsible deeds. This double standard of jailing those who use drugs, or even sell drugs and the freedom of the free wheeling dangerous polluters of our air and coastal waters going free is outrageous. We know better. We know the harm done is being swept under the rug.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our children at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua 'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our communities. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Strong Support for HB790 - Pesticide Disclosure & Notification

Charles Petterson
Kapaa

Dear Chair Lee, Vice Chair Lowen and Members of the EEP Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our residents' health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our children at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

I personally know the effects that pesticides can have on people from when I worked in Nicaragua at La Isla Foundation. People of all ages were dying from Chronic Kidney Disorder of unknown cause. They all had one thing in common: they worked on sugar cane plantations. Pesticides in addition to the working conditions have been killing off people around the world, we do not need that here. Also, if you get a chance to, please watch the film called "Bananaland" and you will be able to see the damages of pesticides to the people living in the area in which the pesticides are sprayed.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

The air we breathe free from harmful toxic pesticides is a Human Right. time to step in and represent the right of all of us to a life free of disease promoting substances because chemical companies want to profit from their irresponsible deeds. This double standard of jailing those who use drugs, or even sell drugs and the freedom of the free wheeling dangerous polluters of our air and coastal waters going free is outrageous. We know better. We know the harm done is being swept under the rug.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Subject: Strong Support for HB790 - Pesticide Disclosure & Notification

Cynthia Hathaway
Keaau, Hawaii

Dear Chair Lee, Vice Chair Lowen and Members of the EEP Committee,

As a mother and a teacher in our public schools, as a person who is committed to the health and wellbeing of our islands, I ask you to support HB 790. It is our right as citizens to know what chemicals and pesticides we are being subjected to by commercial farming. It is your opportunity to make mandatory disclosure and notification of toxic pesticide use around schools and all areas where it effects people a reality.

Thank you for hearing my testimony. And I will add that my concern is greatly understated here.

Jade McMillen

Subject: Support HB 790!

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua 'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Dear Chair Lee, Vice Chair Lowen and Members of the EEP Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our residents' health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our children at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai‘i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua ‘i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our communities. Thank you kindly for considering my testimony in strong support of the measure.

This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Strong Support for HB790 - Pesticide Disclosure & Notification

From: [NAME]
[TOWN]

Dear Chair Lee, Vice Chair Lowen and Members of the EEP Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our residents' health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our children at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai‘i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua ‘i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our communities. Thank you kindly for considering my testimony in strong support of the measure.
Since they allowed GMO's and Monsanta to our islands: ALL our beautiful Monarch Butterflies have been killed , lost our bee populations, along with run off from farms polluting our waters where our Honu sea turtles swim and get horrible tumors!! PLEASE REMOVE THESE TOXIC CORPORATIONS FROM OUR ISLANDS

Subject:	Regarding HB 790 â€“ Relating to Environmental Protection

Please accept this testimony in opposition of HB 790.

While I understand the desire to protect schools, hospitals and residential care facilities, this bill is not needed, nor appropriate. The use of pesticides is already regulated by the federal government through the Environmental Protection Agency. Before a pesticide can be sold for commercial use, it goes through many years of health and environmental studies.

As written, the bill provides no evidence to support the need for legislation at this time. Imposing new restrictions on agri-businesses in Hawaii without any type of scientific justification is unfair. Also of concern is the unintended consequence of buffer zones on Hawaii, which could harm farming operations of all sizes, our economy, and Hawaiiâ€™s food security.

For these reasons, I respectfully request that you vote no on this bill.

Mahalo

Subject: Strong Support for HB790 - Pesticide Disclosure & Notification

From: Jade Moss
Kalaheo

Dear Chair Lee, Vice Chair Lowen and Members of the EEP Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our residents' health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our children at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai‘i located within a mile of fields where agrochemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrochemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua ‘i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our communities. Thank you kindly for considering my testimony in strong support of the measure.

Mahalo Nui Loa!

There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

I believe all means should be explored and used to protect Hawai'i's children from any and all harm or danger...even and especially from 'unintended' pesticide drift. Anything less is unacceptable and negligent.

Please give us a chance to protect our communities. Thank you kindly for considering my testimony in strong support of the measure.

Aloha 'Āina!

This bill requires that the state protect our residents' health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our children at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai‘i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua ‘i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our communities. Thank you kindly for considering my testimony in strong support of the measure.

Andrea Brower, PhD
Anahola, Kauai

Aloha Members of the EEP Committee,

I strongly support HB 790, mandating disclosure of pesticide use. Pesticides being used in Hawaii by the agrochemical-seed industry and others are positively associated with severe health impacts. Knowing what is being sprayed, when and where is the first common sense measure for insuring protection of health and our common land, air, and water.

Thanks for your consideration.

Dear Chair Lee, Vice Chair Lowen and Members of the EEP Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our residents' health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our children at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai‘i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua ‘i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our communities. Thank you kindly for considering my testimony in strong support of the measure.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua 'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Support HB 790!

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua 'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Strong Support for HB790 - Pesticide Disclosure & Notification

From: leleua loupe
HILO

Dear Chair Lee, Vice Chair Lowen and Members of the EEP Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our residents' health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our children at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai‘i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua ‘i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our communities. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Support HB 790!

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Support Bill HB1578!

Dear Chairs of the House Committees on Energy & Environmental Protection and Agriculture,

I am writing in strong support of HB1578, which creates a Carbon Farming Task Force in the State of Hawai'i.

The Food and Agriculture Organization of the United Nat ions (FAO) and the United States Natural Resources Conservation Service (NRCS) have both identified soil health and soil carbon as critical factors for climate resilience, food production, and climate change mitigation.

Many of Hawai'i's soils are currently degraded, but we have the opportunity to reverse that trend. Often taken for granted, healthy soils provide numerous benefits including: reduced sediment, erosion and dust; increased fresh water retention; improved water quality; reduced salinity; improved plant health and crop yields; a reduced need for synthetic inputs; and sequestered carbon dioxide.

HB1578 is an important measure for the future of agriculture in Hawai'i.

I urge you to support HB1578. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Strong Support for HB790 - Pesticide Disclosure & Notification

Mary Spadaro
Honolulu

Dear Chair Lee, Vice Chair Lowen and Members of the EEP Committee,

I am writing to urge your strong support of HB 790 requiring disclosure and notificatio n of application of pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

Long term detrimental effects to human health by pesticides has been known for many years. It is bad enough that these chemicals continue to be used at all, and even more so, that they are used around schools, hospitals, etc.. If our government is not prohibiting the large scale use of these chemicals, I believe they must at least provide rules that make their use known to those who may be affected.

I hope you will strongly support this bill.

Sincerely,
Mary Spadaro

Excuse my iPad, it has its own ideas about spelling!!!!

Dear Chair Lee, Vice Chair Lowen and Members of the EEP Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our residents' health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our children at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted- use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows

Dear Chair Lee, Vice Chair Lowen and Members of the EEP Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our residents' health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our children at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua 'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our communities. Thank you kindly for considering my testimony in strong support of the measure.

This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua 'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Support of Pesticide Disclosure and Buffer Zones

Aloha;

I support Bills: HB790, HB1571, HB252! It is time to step up and protect our residents and keiki of the islands.

The pesticide companies are major corporations, it is no hardship for them to disclose what they are using. With chemicals like these, time is of the essence - and armed with this information, emergency services can act quickly and appropriately to any accidental exposure. Engaging in a legal tug-of-war to find out what chemical(s) a person was exposed to could literally cost them their lives. Disclosing to our community what they are spraying is not costing them future income - it's not like we are going to go into competition with them to use these chemicals. They say they are spraying pesticides, but without disclosure, how do we know what they are really using?

These companies could afford to purchase an uninhabited island somewhere and conduct experiments to their heart's content. But they are here on Kauai, in a community of people, insisting on their right to spray chemicals next to schools, playgrounds and public places, which sounds suspiciously like arguing for the right to experiment on humans. They have other choices. They can go elsewhere. Yet, they continue to argue for this one scenario and fight us on buffer zones. Think about it.

Funding for further study needs to be passed. It is bad enough for them to be damaging the environment, wildlife and watershed, but they are damaging the lives of people too. Long term studies need to be set in motion. Seriously, how much of these extremely dangerous pesticides are in widespread use on vast areas of food cropland in other places? I'd wager, hardly any at all because of the danger. So ask yourselves, what is the use of these extreme chemicals? Why have them at all? And why here?

Please pass these bills and allow the proper State and County Departments to work for the good of our communities and assert their protective powers to care for the ‘aina and the people of our islands.

Thank you,
Nicole Lawrence

Subject: Strong Support for HB790 - Pesticide Disclosure & Notification

From: Stephenie Blakmore
4780 Iiwi Rd., #2
Kapa`a, Hawaii 96746

Dear Chair Lee, Vice Chair Lowen and Members of the EEP Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our residents' health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas. I am deeply concerned with the effects long- term pesticide application and pesticide drift are having on our children at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled “Pesticide Exposure in Children,” children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma. As a special education teacher it is he artbreaking to see so many families in Hawaii being sentenced to life long disabilities due to toxins in our environment. Many of my students end up with disabilities that could have been avoided had their safety been a greater priority than corporate profit. As you may or may not know, many of our keiki will never be able to live full independent lives because of their disabilities.

Currently there are at least 27 schools in Hawai‘i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space. Advanced notification

disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact.
While the voluntary Kauaʻi pesticide disclosure program will ultimately be “expanded” by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it’s impossible to know if the data is accurate and valid.
Since we are blessed with a three season growing season that allows faster research regarding pesticide development, it is obviously not in the financial interest of any of these large agricultural chemical companies, or the land owners renting properties for experimental agricultural, such as the Robinsons, Kamehameha Trust, to limit their activities. It is however, more than in the financial interest of the State of Hawaii to implement this no cost measure and save thousands to millions of dollars in education and health services budgets by proactively preventing the poisoning of residents in Hawaii.
Please recognize that is everyone's responsibility to protect our communities, and passing this bill is your opportunity to make our state safer.
Mahalo for considering my testimony in strong support of the measure.

Subject: Support HB 790!

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua 'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Subject:	Regarding HB 790 â€“ Relating to Environmental Protection

Please accept this testimony in opposition of HB 790.

While I understand the desire to protect schools, hospitals and residential care facilities, this bill is not needed, nor appropriate. The use of pesticides is already regulated by the federal government through the Environmental Protection Agency. Before a pesticide can be sold for commercial use, it goes through many years of health and environmental studies.

As written, the bill provides no evidence to support the need for legislation at this time. Imposing new restrictions on agri-businesses in Hawaii without any type of scientific justification is unfair. Also of concern is the unintended consequence of buffer zones on Hawaii, which could harm farming operations of all sizes, our economy, and Hawaiiâ€™s food security.

For these reasons, I respectfully request that you vote no on this bill.

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

I am opposed to HB 790. This bill divides the farming community and narrowly targets a small group of well-trained pesticide users.

Bill 790 calls for mandatory buffer zones that could significantly reduce farmable acres. The EPA already registers all products and includes a specific set of conditions for each product based on years of testing. Among these conditions are buffer zones that have been established through science-based evaluation.

There isn't a need for more regulation and I'm concerned about the unintended consequences to the typical farms in Hawaii should mandatory buffer zones be expanded.

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

I respectfully oppose HB 790. Good public policy must and should be based on facts, and the facts on basic pesticide use in Hawaii are clear.

• The independent Joint Fact Finding Committee on Kauai found no evidence of health or environmental impacts associated with pesticide use.

• In 2015, the Hawaii Department of Agriculture (HDOA) reported that, out of 16 school evacuations in the last 8 years due to complaints about pesticides, none were due to activities of seed companies.

• A statewide study of 24 surface water sites by the Department of Health found trace detection of pesticides – the majority of which represented minute concentrations that fall far below state and federal benchmarks for human health and ecosystems.

• There is no evidence of higher incidence of cancer on the island of Kauai overall or for specific geographic regions on the island where seed companies operate, as compared to the state of Hawaii.

HDOA has the data on who uses pesticides, where they are being used and how they are being applied. These are the facts that must be considered.

Please vote no on HB 790.

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

Please accept this testimony in opposition of HB 790.

Why Another bill to stifle Agriculture in our State. Why does the legislature do this every year. Cowtowing to the Environmental Extremists and Anti GMO Coalition.

If you are indeed interested in protecting schools and hospitals etc., then extend the regulation of pesticides to everyone who uses it, including the Pest companies, City and State workers, Landscapers and Golf Courses.

However, the use of pesticides is already regulated by the federal government through the Environmental Protection Agency. Before a pesticide can be sold for commercial use, it goes through many years of health and environmental studies.

As written, the bill provides no evidence to support the need for legislation at this time. Imposing new restrictions on agri-businesses in Hawaii without any type of scientific justification is unfair. Also of concern is the unintended consequence of buffer zones on Hawaii, which could harm farming operations of all sizes, our economy, and Hawaiiâ€™s food security.

For these reasons, I respectfully request that you vote no on this bill.

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

I respectfully oppose HB 790. Good public policy must and should be based on facts, and the facts on basic pesticide use in Hawaii are clear.

• The independent Joint Fact Finding Committee on Kauai found no evidence of health or environmental impacts associated with pesticide use.

• In 2015, the Hawaii Department of Agriculture (HDOA) reported that, out of 16 school evacuations in the last 8 years due to complaints about pesticides, none were due to activities of seed companies.

• A statewide study of 24 surface water sites by the Department of Health found trace detection of pesticides – the majority of which represented minute concentrations that fall far below state and federal benchmarks for human health and ecosystems.

• There is no evidence of higher incidence of cancer on the island of Kauai overall or for specific geographic regions on the island where seed companies operate, as compared to the state of Hawaii.

HDOA has the data on who uses pesticides, where they are being used and how they are being applied. These are the facts that must be considered.

Please vote no on HB 790.

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

I am opposed to HB 790. This bill divides the farming community and narrowly targets a small group of well-trained pesticide users.

Bill 790 calls for mandatory buffer zones that could significantly reduce farmable acres. The EPA already registers all products and includes a specific set of conditions for each product based on years of testing. Among these conditions are buffer zones that have been established through science-based evaluation.

There isn't a need for more regulation and I'm concerned about the unintended consequences to the typical farms in Hawaii should mandatory buffer zones be expanded.

Allan Parachini 2319 Kamali'i Street, Kilauea, HI 96754

TESTIMONY IN OPPOSITION
TO HB 1571 AND HB 790

Submitted by Allan Parachini

These two identical bills seek, for at least the third time, to get the House and Senate to buy into a regulatory scheme in which the real target of the legislation is the small number of seed companies that work with Genetically Modified Organism crops. These bills try to achieve this by creating the illusion that they are focused on pesticide use.

Nearly identical (actually, probably literally identical) legislation has failed for at least the last two sessions. These bills should also fail because:

--They make assertions and pretend to draw sweeping conclusions without sufficient (in some cases any) factual documentation, seeking to drive a wedge between agricultural activities in which Hawaii's seed companies (and the limited number of GMO papaya farmers) engage and the rest of agriculture, creating a false dichotomy between GMO and "conventional" and "organic" farming.

The seed companies contribute enormously to Hawaii's economy and do so without proven adverse effects on the population. These companies have, at the same time, been made the victims of a hysterical campaign of misinformation and disinformation by organizations financially underwritten by the organic food industry that purport to work in the interests of safe food. In reality, this support is intended to outlaw GMO agriculture and everything related to it in Hawaii. The Legislature must see through this tired gimmick and disingenuous propaganda.

--Nearly all farms use pesticides. These bills seek to create the false impression that large "commercial agricultural entities"—translation: GMO seed companies—use comparatively more pesticides than other agricultural enterprises, when there is, in fact, no evidence that this is true by any valid comparative mesasure.

--These bills seek, again, to empower individual counties to enact their own pesticide regulatory schemes, with no requirement that such regulation have any basis in science or fact. Under this bill, a county could ban pesticide use simply because the members of its County Council don't like the color of the label on the product.

Hawaii agriculture could not survive this kind of piecemeal, inconsistent, contradictory regulation. Two U.S. District Court Judges and the Ninth Circuit Court of Appeals have noted that the Hawaii legislature reserved to itself the statewide duty to regulate pesticides. Counties do not have the expertise, personnel, funds or experience to get into the pesticide regulation business. That authority must remain at the state level.

Significantly, the Hawaii Department of Agriculture has recently stepped up its focus on pesticide enforcement, introducing statewide programs with great promise. This initiative is the best approach, not creation of an inscrutable regulatory hodgepodge county by county.

Thank you.

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

Dear Chairs Lee and Creagan and members of the Committee on Energy & Environmental Protection and Committee on Agriculture,

While on the surface this bill aims to "protect" our children, elderly, and other sensitive individuals from the purported harmful effects of restricted-pesticides, the reality is otherwise. I OPPOSE this bill as it unfairly targets farmers and agriculture.

Recent studies conducted by the Hawaii Department of Agriculture and Department of Health underscore that pesticide use in agriculture is NOT the cause of incidences related to school evacuations or surface water contamination, yet the myths prevail, especially in the media.

Pesticide toxicity to humans and the environment is carefully evaluated by the U.S. Environmental Protection Agency before it is allowed to be sold and used. EPA's regulatory oversight of all pesticides manufactured in, imported to, and used in the U.S. includes not only the science-based review and decision-making process but also oversight to ensure compliance with all federal laws and regulations related to pesticides. To require additional posting, reporting, and buffer requirements is unnecessary and places increased costs on farmers, at a time when agriculture is already besieged by other challenges.

The reality is this: farmers--whether they be large-scale commercial or smaller family farm--are land stewards, and they understand firsthand the need for crop protection and pesticides. Farmers live in our communities and their children attend local schools.

It's EVERYONE'S duty to use pesticides responsibly. Farmers and agriculture are not the enemy.

Mahalo for the opportunity to testify.

I respectfully oppose HB 790. Good public policy must and should be based on facts, and the facts on basic pesticide use in Hawaii are clear.

• The independent Joint Fact Finding Committee on Kauai found no evidence of health or environmental impacts associated with pesticide use.

• In 2015, the Hawaii Department of Agriculture (HDOA) reported that, out of 16 school evacuations in the last 8 years due to complaints about pesticides, none were due to activities of seed companies.

• A statewide study of 24 surface water sites by the Department of Health found trace detection of pesticides – the majority of which represented minute concentrations that fall far below state and federal benchmarks for human health and ecosystems.

• There is no evidence of higher incidence of cancer on the island of Kauai overall or for specific geographic regions on the island where seed companies operate, as compared to the state of Hawaii.

HDOA has the data on who uses pesticides, where they are being used and how they are being applied. These are the facts that must be considered.

Please vote no on HB 790.

I oppose this bill as it unfairly targets farmers and agriculture. If there was any evidence of harm from these operations this bill would make sense. But after US Geological Survey on ground water, Ambient air studies by UH at Kauai schools, DOH, and DOA data and surveys provide just the opposite data showing a total lack of evidence. Passing this bill would just ignore the facts and go with those who have never farmed and have an agenda to get rid of Hawaii's number one agriculture business. Even the JFF study found no evidence yet somehow had written their recommendations before the conclusion of their information gathering?? Thats just plan poor form and not something any rationale person would use as evidence to pass a bill for. Farmers are land stewards and they understand firsthand the need for crop protection and pesticides; they live in our communities and their children attend local schools. These operations have been operated safely here since the mid 60's and now
50 years
later they are the evil empire. Come on and think about it. It's everyone's duty to use pesticides responsibly. Farm ers and agriculture are not the enemy.

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

I respectfully oppose HB 790. Good public policy must and should be based on facts, and the facts on basic pesticide use in Hawaii are clear.

• The independent Joint Fact Finding Committee on Kauai found no evidence of health or environmental impacts associated with pesticide use.

• In 2015, the Hawaii Department of Agriculture (HDOA) reported that, out of 16 school evacuations in the last 8 years due to complaints about pesticides, none were due to activities of seed companies.

• A statewide study of 24 surface water sites by the Department of Health found trace detection of pesticides – the majority of which represented minute concentrations that fall far below state and federal benchmarks for human health and ecosystems.

• There is no evidence of higher incidence of cancer on the island of Kauai overall or for specific geographic regions on the island where seed companies operate, as compared to the state of Hawaii.

HDOA has the data on who uses pesticides, where they are being used and how they are being applied. These are the facts that must be considered.

Please vote no on HB 790.

Aloha Honorable Representatives,

I respectfully oppose this bill, HB 790. I believe that good policy decisions come from facts and accurate information, and humbly ask that your decisions are based on a thorough understanding of what's accurate, and what's not.

• The independent Joint Fact Finding Committee on Kauai found no evidence of health or environmental impacts associated with pesticide use.

• In 2015, the Hawaii Department of Agriculture (HDOA) reported that, out of 16 school evacuations in the last 8 years due to complaints about pesticides, none were due to activities of seed companies.

Subject: Opposition to HB 790 â€“ Relating to Environmental Protection

Hello, I am opposed to HB 790.
This bill once again targets large scale agricultural operations, even though we have evidence that these businesses are not the largest users of pesticides!! Realistically, I would much rather receive notice that my neighbor will be doing fumigation tenting next week, or that my child's school playground will be sprayed for weeds than be notified of a corn field being sprayed half a mile away!!
On Kauai, the seed companies are already doing voluntary disclosure and reporting. Mandating disclosure and reporting for certain entities and letting others continue unchecked is a waste of time and effort and funding, not to mention discriminatory and blatantly biased.

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

I am opposed to HB 790. This bill divides the farming community and narrowly targets a small group of well-trained pesticide users.

Bill 790 calls for mandatory buffer zones that could significantly reduce farmable acres. The EPA already registers all products and includes a specific set of conditions for each product based on years of testing. Among these conditions are buffer zones that have been established through science-based evaluation.

There isn't a need for more regulation and I'm concerned about the unintended consequences to the typical farms in Hawaii should mandatory buffer zones be expanded.

Subject:	Regarding HB 790 â€“ Relating to Environmental Protection

Please accept this testimony in opposition of HB 790.

While I understand the desire to protect schools, hospitals and residential care facilities, this bill is not needed, nor appropriate. The use of pesticides is already regulated by the federal government through the Environmental Protection Agency. Before a pesticide can be sold for commercial use, it goes through many years of health and environmental studies.

As written, the bill provides no evidence to support the need for legislation at this time. Imposing new restrictions on agri-businesses in Hawaii without any type of scientific justification is unfair. Also of concern is the unintended consequence of buffer zones on Hawaii, which could harm farming operations of all sizes, our economy, and Hawaiiâ€™s food security.

For these reasons, I respectfully request that you vote no on this bill.

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

I respectfully oppose HB 790. Good public policy must and should be based on facts, and the facts on basic pesticide use in Hawaii are clear.

• The independent Joint Fact Finding Committee on Kauai found no evidence of health or environmental impacts associated with pesticide use.

• In 2015, the Hawaii Department of Agriculture (HDOA) reported that, out of 16 school evacuations in the last 8 years due to complaints about pesticides, none were due to activities of seed companies.

• A statewide study of 24 surface water sites by the Department of Health found trace detection of pesticides – the majority of which represented minute concentrations that fall far below state and federal benchmarks for human health and ecosystems.

• There is no evidence of higher incidence of cancer on the island of Kauai overall or for specific geographic regions on the island where seed companies operate, as compared to the state of Hawaii.

HDOA has the data on who uses pesticides, where they are being used and how they are being applied. These are the facts that must be considered.

Please vote no on HB 790.

Subject:	Regarding HB 790 â€“ Relating to Environmental Protection

Please accept this testimony in opposition of HB 790.

While I understand the desire to protect schools, hospitals and residential care facilities, this bill is not needed, nor appropriate. The use of pesticides is already regulated by the federal government through the Environmental Protection Agency. Before a pesticide can be sold for commercial use, it goes through many years of health and environmental studies.

As written, the bill provides no evidence to support the need for legislation at this time. Imposing new restrictions on agri-businesses in Hawaii without any type of scientific justification is unfair. Also of concern is the unintended consequence of buffer zones on Hawaii, which could harm farming operations of all sizes, our economy, and Hawaiiâ€™s food security.

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

I am opposed to HB 790. This bill divides the farming community and narrowly targets a small group of well-trained pesticide users.

Bill 790 calls for mandatory buffer zones that could significantly reduce farmable acres. The EPA already registers all products and includes a specific set of conditions for each product based on years of testing. Among these conditions are buffer zones that have been established through science-based evaluation.

There isn't a need for more regulation and I'm concerned about the unintended consequences to the typical farms in Hawaii should mandatory buffer zones be expanded.

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

I respectfully oppose HB 790. Good public policy must and should be based on facts, and the facts on basic pesticide use in Hawaii are clear.

• The independent Joint Fact Finding Committee on Kauai found no evidence of health or environmental impacts associated with pesticide use. Further, continuous air monitoring for over a year by University of Hawaii scientists at Kauai schools found only infinitesimally small amounts of very few pesticides, and those detected were far below any health concern level. Hence the best data available shows that pesticide exposure on Kauai is not a problem, so no requirements are expenditure of tax payer money is needed.

• In 2015, the Hawaii Department of Agriculture (HDOA) reported that, out of 16 school evacuations in the last 8 years due to complaints about pesticides, none were due to activities of seed companies.

• A statewide study of 24 surface water sites by the Department of Health found trace detection of pesticides – the majority of which represented minute concentrations that fall far below state and federal benchmarks for human health and ecosystems.

• There is no evidence of higher incidence of cancer on the island of Kauai overall or for specific geographic regions on the island where seed companies operate, as compared to the state of Hawaii.

HDOA has the data on who uses pesticides, where they are being used and how they are being applied. These are the facts that must be considered.

Finally, if the justification for this bill is safety concern about pesticide exposure, why isn't the restricted use pesticide used in the greatest quantity in the counties and statewide targeted? Chlorine is the nation's and state's most used RUP, and it is injected into our drinking water. Almost everyone in the state drinks that RUP daily, and accept the very small risk because the benefits far outweigh those risks. The same is true with agricultural pesticides, and they are already regulated by federal and state agencies.

Please vote no on HB 790.

Subject:	Regarding HB 790 â€“ Relating to Environmental Protection

Please accept this testimony in opposition of HB 790.

While I understand the desire to protect schools, hospitals and residential care facilities, this bill is not needed, nor appropriate. The use of pesticides is already regulated by the federal government through the Environmental Protection Agency. Before a pesticide can be sold for commercial use, it goes through many years of health and environmental studies.

As written, the bill provides no evidence to support the need for legislation at this time. Imposing new restrictions on agri-businesses in Hawaii without any type of scientific justification is unfair. Also of concern is the unintended consequence o f buffer zones on Hawaii, which could harm farming operations of all sizes, our economy, and Hawaiiâ€™s food security.

For these reasons, I respectfully request that you vote no on this bill.

Mahalo

Roman Dycus	Individual	Oppose	No

Comments: I am opposed to HB 790. This bill divides the farming community and narrowly targets a small group of well-trained pesticide users. Bill 790 calls for mandatory buffer zones that could significantly reduce farmable acres. The EPA already registers all products and includes a specific set of conditions for each product based on years of testing. Among these conditions are buffer zones that have been established through science-based evaluation. There isn't a need for more regulation and I'm concerned about the unintended consequences to the typical farms in Hawaii should mandatory buffer zones be expanded.

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

I respectfully oppose HB 790. Good public policy must and should be based on facts, and the facts on basic pesticide use in Hawaii are clear.

• The independent Joint Fact Finding Committee on Kauai found no evidence of health or environmental impacts associated with pesticide use.

• In 2015, the Hawaii Department of Agriculture (HDOA) reported that, out of 16 school evacuations in the last 8 years due to complaints about pesticides, none were due to activities of large scale farmers or Ag companies.

• A statewide study of 24 surface water sites by the Department of Health found trace detection of pesticides – the majority of which represented minute concentrations that fall far below state and federal benchmarks for human health and ecosystems. The results were replicated by Earthjustice.

• There is no evidence of higher incidence of cancer on the island of Kauai overall or for specific geographic regions on the island where seed companies operate, as compared to the state of Hawaii. In fact, the state Tumor Registry just announced Hawaii's cancer rates are significantly lower than rest of U.S.

HDOA has the data on who uses pesticides, where they are being used and how they are being applied. These are the facts that must be considered.

Please vote no on HB 790.

Hawaii State House

2/6/17

Testimony regarding HB 790

Greetings.
Please consider my opposition to this legislation.
My name is David Schell and I am the General Manager for Island Princess Macadamia Nut Company in Kea'au Hawaii.
As with many legislative attempts to regulate farming activities in Hawaii, I consider HB 790 to be unnecessary and unproductive. State and federal governments already heavily regulate large farms and placing an additional reporting requirement on them will not serve to enhance or protect the environment, as the proponents of this bill would have you believe. Indeed, this bill if it were to become law will only increase the costs of operations for these businesses and force them to increase their sales prices to the consumers.
While I am sure that citizens are concerned about the environment impact owing to the use of pesticides, it would be a better investment for the government to educate them in regard to the safe-guards and regulations that are already in place. So long as the average consumer can be mislead by ideologically-driven activists about the real nature of pesticide use by farmers then the legislature and the farming community will continue to be barraged annually by these time and resource wasting efforts.

Thank you

HB 790 - RELATING TO ENVIRONMENTAL PROTECTION

February 7, 2017, 8:30 a.m. - Conference Room 325

The Honorable Chris Lee; Chair, Energy & Environmental Protection
The Honorable Richard Creagan; Chair, House Committee on Agriculture
The Honorable Members of the Joint Agriculture and Energy & Environmental Protection Committee

RE: HB790 - RELATING TO ENVIRONMENTAL PROTECTION (Oppose)

Dear Chairman Lee and Chairman Creagan:

On behalf of HFRU I'm here today to advocate for our Right to Farm on behalf of Hawaii Island agricultural producers. Collectively, we represent 97% of all agricultural revenue on Hawaii Island; $194 Million out of a total of $202 total agricultural revenue, and almost 3,000 farmers and ranchers working on 630,000 acres of land.

We are opposed to HB 790 for many reasons. Primarily requiring the Good Neighbor Program to become Mandatory; burdening the farmers who can least afford it. In addition mandatory buffer zones despite mandatory buffer zones already being in place under Federal law based on the need of the specific crop protection method being used.

The large scale agricultural operations are already reporting voluntarily. Why harm smaller farmers who are least able to comply with added regulation. Agriculture is already heavily regulated with more than 30 agencies having oversight of the average farm. There has been no indication of harm in any scientific based study or fact finding that reflects harm from farmers, so why are you allowing agriculture to be targeted again?

Respectfully, I ask that you oppose House Bill HB 790, Mahalo for the opportunity to submit testimony.

Mahalo,

Lorie Farrell

sustainable coastlines Hawaii

February 6, 2016

To Whom it May Concern,

On behalf of Sustainable Coastlines Hawaii, we would like to express our support for Bill HB790. We are in support of this measure as it will allow us to understand what is being applied while also mitigating risk of exposure to our keiki. As an organization that works closely to sustain and even enhance the beauty of our coastlines, specifically for our youngest and unborn generations, the fewer chemicals used means less impact on our coastlines. Please consider the end of the road regarding your decision on this Bill, the Ocean.

Sincerely yours,

Kahi Pacarro

warren mayberry	DuPont Pioneer	Oppose	No

Comments: Warren Mayberry Sr. Manager of Government Affairs DuPont Pioneer 1005 Congress Ave. Austin, TX 78701 HB 790, Relating to Environmental Protection House Committee on Agriculture Tuesday February 7, 2017 Room 325 at 9:00 a.m. Position: Opposed Chair Creagan, Vice Chair DeCoite, and Members of the House Agriculture Committee, DuPont Pioneer is a seed company with farming operations in four locations in Hawaii. DuPont Pioneer employs approximately 300 people in a wide range of types of jobs on Oahu and Kaua`i. Our farm management practices include the application of science and technology, and innovative farming techniques that include the responsible use of pesticides. Farmers understand the importance of good stewardship practices, including judicious use of pesticides and management practices that reduce pests. We are opposed to HB 790, which narrowly targets a small group of pesticide users. The larger agricultural users of pest control products are amongst the most highly trained and skilled users, following labels and regulations specific for each product. HB 790 ignores the substantial data generated and rigorous Environmental Protection Agency (EPA) approval process, before any new pesticide product can be used. Many pesticides approved for use in organic farming go through this same rigorous EPA approval process for safe use. Bill 790 creates the “Kauai Good Neighbor Agreement” as a mandatory statewide program. Each EPA registered pesticide product has a specific set of conditions for application, with labels for some products stating required buffer zones. Currently, science-based buffer zones have been established through EPA evaluation and assessment that vary in distance based on product and type of use. Based on federal requirements, tenants of HB 790 are unnecessarily burdensome. Reporting provisions requiring notifications for each application would be very onerous and difficult to carry out. Bill 790 would negatively impact integrated pest management practices on our farms that allow us to respond quickly and only as needed. Integrated pest management practices rely on scouting for pests to monitor populations, tracking tolerable pest levels on crops, use of biocontrol and other organic pest control methods, and targeted response only when needed. We handle pesticides in a manner that is safe and consistent with state and federal requirements. DuPont Pioneer supports all types of agriculture and we encourage policies that enable farmers to thrive. This bill divides the farming community and narrowly targets a small group of well-trained

pesticide users. Expansion of mandatory buffer zones could result in unintended consequences to the typical farms in Hawaii that are often 2 to 5 acres. The potential for extension of this bill to other farms and businesses would negatively affect other entities that use organic and conventional EPA registered products to control weeds, insects, and diseases. Thank you for the opportunity to provide testimony for HB 790.

HOUSE COMMITTEE ON ENERGY AND ENVIRONMENTAL PROTECTION
HOUSE COMMITTEE ON AGRICULTURE

TESTIMONY ON HB 790
RELATING TO ENVIRONMENTAL PROTECTION

Room 325
9:00 AM

Aloha Chairs Lee and Creagan, Vice Chairs Lowen and DeCoite, and Members of the Committees:

I am Randy Cabral, President of the Hawaii Farm Bureau (HFB). Organized since 1948, the HFB is comprised of 1,900 farm family members statewide, and serves as Hawaii's voice of agriculture to protect, advocate and advance the social, economic and educational interests of our diverse agricultural community.

The Hawaii Farm Bureau strongly opposes HB 790, which would allow each county to arbitrarily regulate farmers' use of pesticides, and establish onerous, unmanageable, and unjustified requirements on Hawaii's farmers.

HFB respectfully opposes this bill for the following reasons:

Pesticides are being used safely and are already strictly regulated

- Pesticides are only registered by the U.S. EPA after thorough vetting for safety, including ensuring protection of communities and sensitive populations. EPA has the expertise to evaluate pesticide products and conducts comprehensive evaluations and periodic re-evaluations of each pesticide before allowing it to be sold and used.
- Farmers in Hawaii, like those in California and around the world, use pesticides to protect their crops. These products are strictly regulated by the U.S. EPA and the State Department of Agriculture and are being used safely.
- If there are *any* allegations that a farmer is not adhering strictly to the many mandatory safe usage rules, DOA, and often EPA enforcement agents arrive promptly at the farm to conduct an exhaustive investigation and enforce corrective action.

Unjustified, arbitrary, and non-uniform farming requirements will cause more Hawaii farmers to go out of business

- For many reasons completely out of their control, farmers in Hawaii are already at an overwhelming disadvantage compared to mainland and foreign farmers. Hawaii is one of the most difficult places in which to farm for a living.
- Unjustified, arbitrary, and non-uniform farming requirements will cause more farmers to go out of business at a time when the public is demanding more food security and sustainability, and protection of agricultural land from urban development.
- Hawaii is one of the best places on earth for proliferation of destructive and dangerous insects and diseases. Farmers and others must use Integrative Pest Management practices that include the judicious use of pesticides, when appropriate.

There is no evidence to support the need for this bill – where is the problem?

- Many of the claims made in this measure are inaccurate and misleading. The entire bill contradicts EPA's findings and regulatory programs allowing for safe use of pesticides. It also contradicts facts and data from Hawaii.
- Among others, this statement is false, *"…the number of large-scale, outdoor commercial agricultural operations in Hawaii has been increasing."* In fact, commercial farms in Hawaii have suffered serious setbacks recently, with several long-standing productive large, medium, and small farms going out of business.
- There is no evidence to support the claims made in this bill. There is no justification for these additional and overwhelmingly burdensome requirements on our farmers.
- Monitoring studies at Waimea Canyon Middle School, and other Kauai locations, show that the air quality is well within the strict health-based screening levels established by regulatory authorities. The often-cited school incident at Waimea Canyon Middle School that caused students to be evacuated, was determined by state officials **NOT** to be caused by pesticides.
- The Hawaii DOA and DOH have undertaken environmental monitoring studies to obtain more data to add to previous studies, which all demonstrated that pesticides are ***not*** causing health or environmental impacts in our state.
- The cost of sharing product and specific use information, mandatory no-pesticide zones, and potential litigation will substantially increase farmers' costs without any increase in public safety.
- Other states have considered some of the requirements proposed in this bill and have rejected them due to the lack of benefit to the public and prohibitive cost to farmers and the state.
- A DOA review of the few pesticide drift incidents in Hawaii over the last decade or so, that impacted a school, found that farmers' use of pesticides was not the problem (in one case, a turf grower misapplied a product). The proposed buffer program would not protect schools from incidents like these which were caused by homeowners' misapplication of products.
- The voluntary Good Neighbor Program for large agricultural operations has been successful on Kauai and there is no justification for making it mandatory.

Arbitrary buffer zones are unnecessary and hurt agriculture

- The EPA conducts a thorough scientific analysis of each pesticide before allowing it to be marketed and used. If needed, EPA already mandates specific buffers or other use restrictions as part of the legally enforceable product use requirements.

- Hawaii farms are very small in comparison to mainland farms. Taking a portion of a farm out of production could have devastating effects on the farm's ability to remain viable.

Counties are not equipped to make and enforce pesticide laws

- In order to have safe and productive farms and ranches to provide food, flowers, and other agricultural products, not to mention the beautiful vistas Hawaii's residents and visitors expect, farmers must conduct their work under uniform and scientifically valid pesticide regulations.
- The U.S. EPA and the Hawaii Department of Agriculture have the expertise and resources to ensure that pesticides are regulated properly and that pesticides are used safely. The counties do not have this expertise nor the resources to put into place an effective regulatory and enforcement system.

Let's take real and proactive measures to protect children and others from pesticide exposure

- If the purpose of this measure is to better protect children from possible pesticide exposure, we should focus efforts on schools and in homes, where pesticide misuse could more likely occur.
- The State could implement an Integrated Pest Management program at each school. Schools themselves are not required to post notices regarding their own pesticide applications or to notify parents in advance.
- HFB has been requesting adequate funding for programs run by University of Hawaii and HDOA to provide additional education and training to farmers, especially immigrant farmers, on effective Integrated Pest Management systems.
- Since pesticide poisonings are often due to homeowners' lack of diligence in storing products away from their children, DOA and DOH can reinvigorate their pesticide home safety programs to help prevent these accidents.

HFB is extremely concerned that the layering of more and more unjustified and inconsistent restrictions and requirements, along with the threat of frivolous lawsuits, will make it nearly impossible to farm successfully in Hawaii, and will deter young people from entering farming altogether.

Thank you for your careful consideration of our comments **in strong opposition to this bill**, and for your support of Hawaii's farmers and ranchers.

Testimony from Jeff Case, Senior Director Government Affairs, CropLife America

In opposition to HB790– Relating to Environmental Protection

Tuesday, Feb. 7, 9:00 am – House Committees on Energy and Environmental Protection and Agriculture

Aloha Chairs Lee and Creagan and members of the committees,

CropLife America (CLA) represents the manufactures and registrants of pesticide products that are used for agriculture production. We recognize the need for these valuable crop protection products to be used in a manner that is protective to schools, children and sensitive environmental areas. But we are opposed to HB 790.

Farmers in Hawaii – large and small - have been working the land for generations. They have an interest and a responsibility to keep their land safe and healthy for use both today and in the future. Restricted Use Pesticides (RUPs) are tools they use to protect their land from weeds and pests and are part of important Integrated Pest Management (IPM) strategies embraced by the agricultural community. If RUPs could not be safely used, farmers would not use them.

RUPs are restricted in that they may only be applied by or under the supervision of a trained and certified applicator and are not available to the general public. These special applicators are required to follow certain special rules, such as applying only during certain times or at certain locations or leaving untreated buffer areas. That doesn't mean RUPs are necessarily more toxic than other pesticides. Unlike other pesticides, applicators must be recertified by the Hawaii Department of Agriculture every 5 years which helps ensure that these pesticides are applied safely and according to label instructions.

A strong state pesticide regulatory program is essential to assuring the public that valuable pesticide products are used properly. We believe that the legislature has an opportunity to provide that support to the Hawaii State Department of Agriculture through HB 889 which provides them with the funding to strengthen their capacity to regulate pesticides in the state. If lawmakers are sincere about addressing public safety, support the pesticide branch of the Dept. of Agriculture through HB 889.

Mahalo for your consideration.

Boyd Ready	Individual	Oppose	No

Comments: Dear Committee members: Buffer zones are already the law and are specifically called out on labels that anyone using pesticides is already legally required to follow. The public notice requirement for the larger operations ignores the fact that most already courtesy notify, and that most of the actual problems documented by DoH and by the Kauai commission were caused by homeowners' misuse. Small, under-capitalized, English 2nd-language, and self-taught farmers are also more likely to misuse pesticides and these are not picked up by this bill. In brief, this is a redundant bill targeting the operators that are least likely to cause a problem, are already regulated, and are already doing disclosure. It would be wise to let this bill die without committee approval.

J Ashman	Individual	Oppose	No

Comments: I respectfully oppose HB 790, which would establish restrictive and burdensome requirements for Hawaii's farmers without providing any additional safeguards for the public. Pesticides are used by nearly everyone in Hawaii, not just farmers. Our water purveyors add restricted use pesticides to our water to protect us from pathogens. Our watersheds are protected from destruction by the use of pesticides to eliminate invasive species. Pesticides can and are being used safely. This bill is unnecessary because both the EPA and Hawaii Department of Agriculture already strictly regulate the use of pesticides. All potential impacts on health and the environment are scrutinized, and strict federal and state laws are in place to mandate how each pesticide is used. HB 790 will make it more difficult to farm in Hawaii and it is already nearly impossible to compete with mainland farmers. Please consider the complex and burdensome federal and state regulations in place to determine whether there is a real need for these proposed state measures and additional restrictions. Thank you.

HB790 Relating to Environmental Protection
House EEP/AGR committees
Tuesday, 02-07-17 9:00AM in House conference room 325

Chair Chris Lee and Vice Chair Nicole Lowen, Chair Richard Creagan and Vice Chair Lynn DeCoite

Position: Oppose

HB 790 calling for reporting of pesticide use is not necessary and is calling for actions that are not needed. Protection of the public from exposure to pesticides is very important and regulations already exist to address this. Processes for reporting a concern or going to an emergency room for suspected exposure are already in place if an individual or a location believes there is a problem with a pesticide application. These processes are in place regardless of the size of the agriculture operation.

Large scale agriculture operations are targeted by this legislation. If protecting the public is the objective, HB790 is not an effective course of action. The result of public disclosure reporting of pesticide use by agricultural users is often false reporting of pesticide impacts by individuals that don't want to see pesticides used. Sensitive populations and sensitive areas are vague terms that set the stage for any entity to claim to be sensitive in some way, becoming meaningless.

Large scale agriculture operations are the focus and the target of this legislation. Larger agriculture employers and larger scale operations carry out education for their employees and maintain high standards of record keeping. If safer use of pesticides is the goal, pesticide education of all users of pesticides would be a recommended approach to address concerns raised by individuals and organizations.

Thank you for the opportunity to provide testimony in opposition to HB790.

Testimony of Paul H. Brewbaker, Ph.D., CBE
606 Ululani St.
Kailua, Hawaii 96734-4430

Re: HB nos. 252, 253, 790, 1571, 1282

I rise to oppose House Bills numbers 252, 253, 790, 1571, 1282 because they ignore scientific consensus, ignore that restricted use pesticides are already regulated by the federal government, and generally disinform the public by misportraying—with disregard for science and the facts—beneficial agricultural uses of insecticides and herbicides as putative human health and environmental risks without benefit of research to support the presumption underlying each of their flawed legislative proposals.

The State of Hawaii will be condemned to years of litigation that it will lose for nothing seeking to deny Hawaii agriculture's Last Man Standing, the corn seed industry, the ability to responsibly use agricultural chemicals safely, as intended, under the constraints imposed by federal regulations and regulators with way more science under their belts than the non-scientists who were the *only* members of the Joint Fact Finding schmackety-schmack not to bail on the group for sheer lack of credibility and integrity. Were these bills proposed by the Trump Adminstration?

It is completely disingenuous to pretend that these bills' primary concern regards pesticides. First of all, these bills don't *even* go after all agricultural pesticide uses, they *only* target some uses by some users, namely, three corn seed companies. Second, the bills fail to recognize that the seed industry's uses are virtually indistinguishable from its share of Hawaii farmed acreage.[1] Third, there is no mention of industrial, residential, or non-agricultural

[1] According to the 2012 *Census of Agriculture* for Hawaii, agricultural chemical use in Hawaii of *all* kinds, including organic farms, is roughly proportionate to farm acreage. This bill ignores about three-quarters of all agricultural uses, not to mention non-agricultural uses (before the shutdown of HC&S on Maui).

	Unit	**Total**	**Other**	**Seed***	**Other as % of Total**	**Seed as % of Total**
Farms and income						
Farms	number	7,000	6,988	12	99.8	0.2

commercial uses of pesticides except—in one instance among the five bills to which I refer—mention of day care centers and certain other related areas implausibly associated, as a generalization, with restricted use pesticide application.

As some of you know, I have written as a consultant of the Hawaii Crop Improvement Association (HCIA) two economic impact studies on Hawaii's seed industry, dominated by maize (corn), extending prior research conducted by my economist colleagues Dr. Tom Loudat and his collaborator Professor Pralad Kastury. One of my studies was researched at the industry's peak, prior to 2014. The other was a follow-up, an update following the collapse of global commodity prices at the end of that that year and its consequences for the derived demand for research and development in the maize genome in Hawaii, commonly known as Hawaii's seed industry. Hawaii's modern seed industry began with winter maize plant-breeding research, after my father joined the University of Hawaii faculty, with his graduate students in the mid-1960s.[2] Several years later, inaugural gatherings of what became the HCIA comprising more than 200 seed companies, one of which was kick-started by my grandfather (also a Ph.D. geneticist and plant breeder), were held on Molokai and on Kauai. The industry is Hawaii agriculture's largest by far today, and on Molokai has existed on former pineapple lands for longer than did the pineapple industry itself. Besides conveying my limited credentials in this regard, this paragraph is intended to provide a multi-generational context of Hawaii ohana engaged with the seed industry for more than a half century. You are talking about thousands of farmers' and their families livelihoods, without evidence of harm from the industry.

Regarding HB 253 Relating to Pesticides

Insecticides like Dursban based on chlorpyrifos have been around for a half century and have been withdrawn from household use, but remain available to farmers and others whose rigorous professional requirements for use are a part of their broader regulation by the U.S. Environmental Protection Agency. I have no reason to believe chlorpyrifos is either under-

[2] J.L. Brewbaker and D.E. Hamill (1967), "Winter corn seed production on the Island of Molokai," *Hawaii Agricultural Extension Service Technical Progress Report* **160**:11, and J.L. Brewbaker (ed.) (1969), "Corn seed production in Hawaii: Present problems and future potential," *Proceedings of the 1st Hawaii Seed Industry Conference, Molokai, Hawaii*. Auntie Bett (Dr. Hamill) still lives on Molokai with her husband Dr. Granger.

regulated in the United States or is misused in Hawaii agriculture. In my personal interactions with people in the pineapple and corn seed industries, specifically, I have *never* gotten the impression that federal requirements are treated cavalierly. Indeed, over the years I have come to the opinion—based on comparisons to my own past work experiences in such areas as manufacturing or ocean engineering—that these Hawaii agricultural activities have safety protocols deeply ingrained into their corporate cultures and attentive to the safety of the communities in which they operate. Chlorpyrifos-based insecticide is a component of a portfolio comprising integrated pest management approaches to pathogen mitigation that have been highly successful in *reducing* overall pesticide use in the United States. From what I have seen in the literature, incidence of human toxicity associated with chlorpyrifos largely has been limited to countries where adherence to such protocols is weak. There is no such evidence in Hawaii of any kind, to the contrary. The bill's own finding [*sic*] that a, "West Kauai agribusiness operation sent at least ten farm workers to the hospital after exposure to chiorpyrifos" conflates evidence that professional safety standards in Hawaii agriculture receive rigorous compliance with the hysterically fake news that workers are being poisoned. *This citation seeks to justify legislation on fake news*. The bill itself recognizes that the EPA is in the process of establishing new human health standards with regard to chlorpyrifos use, yet this bill proposes to ban it before study has concluded. This is like invading Iraq because of weapons of mass destruction when their existence only has been hypothesized by paranoids. The proposal in HB 253 is redundant, pre-emptive regulation at the state level without scientific justification or even the most rudimentary scientific research undertaking. Do the research. HB 253 neither improves upon the federal regulatory process nor contributes to the scientific knowledge upon which it stands.

Regarding HB 252 Relating to Pesticides

I don't know about you but I read the report of the Joint Fact-Finding (JFF) group and they were lame. The report relied on insinuation to assert, without evidence, a number of fictional public health outcomes. What a fail. No wonder the scientists all bailed on the JFF. I was astonished to find no references to some of the actual scientific analyses upon which I myself have come across in my own research. Perhaps I missed it, but the JFF ignored a Hawaii Tumor Registry report prepared for the Hawaii Department of Health which concluded that "there is no evidence of higher incidence of cancer on the island of Kauai overall or for specific geographic regions of the island, as compared to the state of Hawaii."[3] I don't recall reading in the JFF report the remarkable conclusion repeatedly underscored in the research on Hawaii I have seen that, as I wrote in my first corn seed industry study, "*Urban*—not agricultural—applications are the most likely potential sources of environmental exposure to pesticide residues in the Hawaiian Islands." In fifty years there has emerged *no* evidence causally linking the seed industry—the only one I personally have studied—to adverse human health effects. Indeed, putting agricultural workers and their families *out* of a job would create a much larger health hazard than anything the JFF found to whine about. I can't remember a single place in the JFF report where *causality* was statistically or epidemiologically demonstrated running from pesticide use to health or environmental outcomes. All I read in the report was unsubstantiated fear and hysteria. I would be a continuing supporter of efforts by the State of Hawaii to fund

[3] See for yourselves at http://eha-web.doh.hawaii.gov/eha-cma/documents/20fb7e6f-de7f-4111-9ff6-ef8d6e547507.

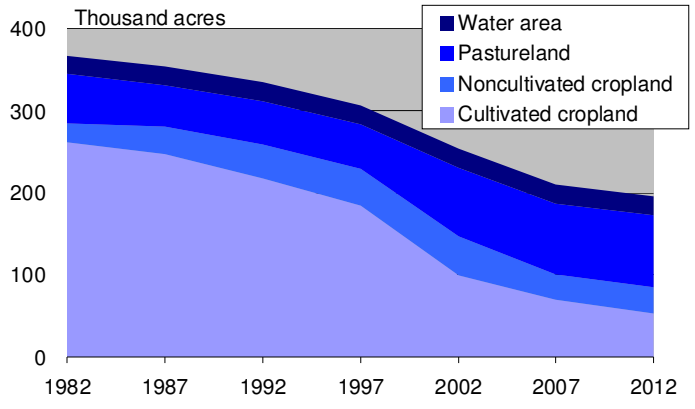

proper epidemiological and environmental study of pesticides as non-point sources of pollution and of potentially adverse human health outcomes, but it doesn't seem like the legislature is talking about that here. At any rate, I wasted too much of my life on the JFF report, and I encourage you to skip it, *ignore it*, and not waste yours.

Regarding HB 790 – Relating to Environmental Protection

OK now we're just getting redundant but, seriously, agricultural pesticides, that's your whole list? Not pest control exterminators, the people tenting houses? Have you been to the home and garden section of Lowe's or Home Depot, Wal-Mart, Koolau Farmers? You've seen a golf course at a resort area, right? Do you think they just look like that on their own? This bill is not really about environmental protection is it? I mean, just read the first sentence, what a crock. "The legislature finds that the number of large-scale, outdoor commercial agricultural operations in Hawaii has been increasing." OMG on what planet are you living? Correct me if I am wrong, but by my reckoning the amount of acreage in cultivated cropland in Hawaii has decreased, over the last 35 years, from more than 260,000 acres in 1982, when I first started coming back to Hawaii to work, to a little over 50,000 acres in 2012 at the time of the last *Census of Agriculture in Hawaii*, to—by my reckoning following the closure of HC&S on Maui—less than 20,000 acres in 2017, when the next Census enumeration will occur.[4] So, *just for starters*, this bill can't even get the basic premise correct, finding that "the number of large-scale, outdoor commercial agricultural operations in Hawaii has been increasing [*sic*]." WRONG. *How on earth could it*

[4] Here's what I get from the various editions of the *Census of Agriculture* for Hawaii:

(*land cover, thous. acres*)	1982	1987	1992	1997	2002	2007	2012
	By area						
Total cropland	284.6	280.3	259.5	229.6	146.4	100.2	85.7
Cultivated Cropland	**261.5**	**247.6**	**217.6**	**183.8**	**99.7**	**69.1**	**53.1**
Irrigated	153.0	148.4	114.7	76.5	65.9	57.6	46.1
Nonirrigated	108.5	99.2	102.9	107.3	33.8	11.5	7.0
Noncultivated Cropland	23.1	32.7	41.9	45.8	46.7	31.1	32.6
Irrigated	3.3	11.3	25.9	26.1	24.3	9.2	10.1
Nonirrigated	16.5	21.4	16.0	19.7	22.4	21.6	22.2
Total cropland	284.6	280.3	259.5	229.6	146.4	100.2	85.7
Pastureland	59.9	50.6	52.0	53.7	84.1	87.2	87.4
Rangeland	1,078.2	1,064.9	1,074.4	1,070.6	1,101.6	1,075.5	1,069.8
Forest land	1,620.9	1,592.4	1,583.6	1,599.4	1,595.0	1,525.8	1,526.9
Other rural land	482.8	467.0	461.7	499.0	502.3	481.1	477.5
Water area	23.0	23.1	22.9	22.9	23.0	23.1	23.1

get what follows correct, if quantitatively what it begins talking about is immaterial, not to mention incorrect?

Clearly, HB 790 is intended to discriminate against a very small group of individual agricultural firms to the complete neglect of *all other restricted pesticide users* in Hawaii. Right off the top you KNOW that the agenda this bill calls for—mandatory reporting by this small group of individual firms—public notification of use, redundant record-keeping (dudes: asked and answered by the federal government), etc. has *little* to do with public health and safety. Even if you were going to fund epidemiological research on this subject, *which this legislation does not propose*, you couldn't possibly interpret its findings in the absence of equally rigorous research on ALL uses of pesticides, restricted and others, but this bill has no intention of actually finding out whether or not pesticide exposure is of any concern. This bill simply *assumes* the result, that a public health risk of exposure *already exists*, and imposes mandatory notification and reporting requirements on a short list of existing users. I concede only that this bill arbitrarily adds "schools, healthcare facilities, childcare and eldercare facilities," and the impossibly general, "other environmentally sensitive areas," to the list, but not golf courses, resort areas, pest control practitioners, or the Hawaii Department Health as it pursues the next vector for catastrophic human risks such as the Zika virus or Ebola.

Fund the research, please, but stop jumping the gun on the basis of fictional premises, irrational fears, and fake studies such as the JFF report. This is not the Salem Witch Trials: stop inflaming mass hysteria. What this bill proposes is the equivalent of banning travel to the United States by Iranian cardiologists because some Iranians are Muslim.

Regarding HB 1282: Relating to Insecticide and Herbicide Use

First of all, I don't think I've ever heard of bee Colony Collapse Disorder (CCD) in Hawaii. The guy that came and took out the 15,000 bees living in several combs in my outside tool-chest said it was all mites, not neonicotinoids, killing bees in Hawaii. Besides, wouldn't neonicotinoids kill the mites *and* the bees? I mean, I'm no entomologist, but seriously. Kills bugs, but only your favorite bugs? And, I'm no environmental scientist, but I'm pretty sure that if I can buy glyphosate off the shelf at Wal-Mart, it is far, *far*, from being a restricted use pesticide. What, mosquito punk? Got pyrethroids?[5] Do you, or do you not believe in the expertise of the Environmental Protection Agency and the scientific community at large? *Pay attention*. This bill is just more of that fake JFF stuff.

Here's my other general objection to this pesticide legislative agenda of "shoot the Iraqi first and investigate the terrorist later." There is no scientific consensus on the contribution of neonicotinoids to the collapse of bee colonies around the world. There *is* scientific consensus on global climate change. There *is* scientific consensus on the safety of genetically-modified organisms. But, there is no scientific consensus on the contribution of neonicotinoids to CCD. Not yet. Maybe never. *So: fund the scientific research*, yo, but stop jumping the gun and irresponsibly banning the very tools that modern agriculture *responsibly* uses to grow crops in the tropics, *where there is no winter kill*. Everything else is growing at least as fast and the

[5] Like the bug spray commercial, "RAID!!!"

pathogens are evolving at least as fast as the food and other crops that farmers are trying to grow in Hawaii. Stop listening to City Slickers who abused the agricultural condominium property regime to build their house on ag land where they were shocked, *shocked* to find that the farmer next door like raise cows because cows make cow pies. Stop reading Fakebook, show some respect for the scientific methodology, show some support for the Environmental Protection Agency, and show some kokua for your neighbors who are just trying to farm their land, using the best techniques modern agriculture can provide. They are not irresponsible. Today, they are on the verge of feeding the planet and they have never been more productive or had more respect for the aina in the history of the world.

Regarding HB 1571: Relating to Environment Protection

This is more of the same, lame, JFF bogacity. To my previous observations I simply will add: (1) first, if you moved next to the farm that's like moving next to the airport and then complaining about the noise from airplanes taking off, I'm just saying; but (2) second, and more importantly, you would think, after fifty *years* of people living near the seed farms—and most of the farms were there first—you would not have to conduct the epidemiological and environmental research on human health and natural exposures to pesticides because it was obvious. Yet, all the research I've seen says that not only is it not obvious, the putative problem *does not exist*. This is a research program this legislature does *not* propose to fund(!), in which the JFF itself did not engage. From the JFF's wild assertions one would think these communities would be populated with mutant creatures from a Zombie movie, the Living Dead, dragging themselves home from work and school in a toxic cloud. The JFF did NOT find causality remotely approximating this outcome. Indeed, the JFF itself reported finding *absence of causality*. After fifty *years*, there *is* no evidence of causality from seed industry operations to adverse human health effects. This bill's reference to "life-long pesticide exposure [being] linked to long-term health effects, including cancer and other serious diseases, decreased cognitive function, and behavioral problems," is the biggest pile of alternative facts in ALL of the aforementioned bills. By the logic of this bill, the assertion in the *Honolulu Star-Advertiser* that Native Hawaiians have greater cancer risk than non-Hawaiians should lead us to investigate their exposures in fictional hot spots such as West Kauai.[6] Naturally, the legislature is silent on anything requiring this much research and scientific appraisal. Instead, this bill's *presumption* is to blame agricultural industry, rather than to understand the population's risk exposure (or lack thereof). The point is to understand whether, and to what extent, some risks rather than others are responsible, and to legislatively act responsibly, not to validate the unfounded fears of the alt-Pono.

Please, reject all of this legislation and get on with something that actually matters.

[6] Kristin Consillio, "Hawaiians suffer cancer more than other isle groups," *Honolulu Star-Advertiser* (February 4, 2017) (http://www.staradvertiser.com/2017/02/04/business/hawaiians-suffer-cancer-more-than-other-isle-groups/).

Joint Agriculture and Energy & Environmental Protection Committee

RE: HB 253, RELATING TO PESTICIDES (OPPOSE)

Aloha Chairman Creagan, Chairman Lee and Fellow Committee Members;

I serve as the Project Leader for Mycogen Seeds Molokai an affiliate of DowAgroSciences. We farm and produce seed corn and employ approximately 100 Molokai residents annually. I also own a farm business on homestead land specializing in producing and marketing specialty teas and herbs. The seed industry is the largest private employer on Molokai. They play an important role in sustaining our island economy as well as providing opportunities for other farmers to succeed. I am opposed to HB 790.

Despite allegations of agricultural pesticides causing widespread harm in Hawaii, the evidence does not support these allegations and does not justify introducing a disguised measure that specifically targets the seed industry. Informed policy decisions should be based on facts and recent studies conducted by the Hawaii Department of Agriculture (HDOA) and Department of Health (DOH) underscore that pesticide use in agriculture is not the cause of incidences related to school evacuations or surface water contamination.

A pesticide project is under way in which $500,000 will be used by the DOH and HDOA to implement a program that identifies three key areas of focus: 1. Environmental sampling. 2. Interagency emergency response exercises for pesticide incidents and 3. Public health, education and outreach.

Supporting and completing the above program and the three key areas of focus should be a priority for the state. The outcome and results of the program will not only provide you with factual and relevant information but will help you to make better informed decisions on pesticide legislation moving forward.

HB 790 as it stands is counterproductive for agriculture. The seed industry is already reporting their RUP usage to the HDOA and the information and data is accessible to the public. In addition we have a volunteer outreach “Good Neighbor Program” (GNP) that includes pesticide disclosure and notification. Participants in the GNP include residential and commercial areas as well as sensitive areas such as schools and hospitals. You do not have to mandate a program to make it work especially when the program is already working voluntarily and serves it's intended purpose.

Mahalo.

Subject: Regarding HB 790 â€" Relating to Environmental Protection

I respectfully oppose HB 790. Good public policy must and should be based on facts, and the facts on basic pesticide use in Hawaii are clear.

• The independent Joint Fact Finding Committee on Kauai found no evidence of health or environmental impacts associated with pesticide use.

• In 2015, the Hawaii Department of Agriculture (HDOA) reported that, out of 16 school evacuations in the last 8 years due to complaints about pesticides, none were due to activities of seed companies.

• A statewide study of 24 surface water sites by the Department of Health found trace detection of pesticides – the majority of which represented minute concentrations that fall far below state and federal benchmarks for human health and ecosystems.

• There is no evidence of higher incidence of cancer on the island of Kauai overall or for specific geographic regions on the island where seed companies operate, as compared to the state of Hawaii.

HDOA has the data on who uses pesticides, where they are being used and how they are being applied. These are the facts that must be considered.

Please vote no on HB 790.

I am opposed to HB 790. This bill divides the farming community and narrowly targets a small group of well-trained pesticide users.

Bill 790 calls for mandatory buffer zones that could significantly reduce farmable acres. The EPA already registers all products and includes a specific set of conditions for each product based on years of testing. Among these conditions are buffer zones that have been established through science-based evaluation.

There isn't a need for more regulation and I'm concerned about the unintended consequences to the typical farms in Hawaii should mandatory buffer zones be expanded.

Please accept this testimony in opposition of HB 790.

While I understand the desire to protect schools, hospitals and residential care facilities, this bill is not needed, nor appropriate. The use of pesticides is already regulated by the federal government through the Environmental Protection Agency. Before a pesticide can be sold for commercial use, it goes through many years of health and environmental studies.

As written, the bill provides no evidence to support the need for legislation at this time. Imposing new restrictions on agri-businesses in Hawaii without any type of scientific justification is unfair. Also of concern is the unintended consequence of buffer zones on Hawaii, which could harm farming operations of all sizes, our economy, and Hawaiiâ€™s food security.

For these reasons, I respectfully request that you vote no on this bill.

I respectfully oppose HB 790. Good public policy must and should be based on facts, and the facts on basic pesticide use in Hawaii are clear.

• The independent Joint Fact Finding Committee on Kauai found no evidence of health or environmental impacts associated with pesticide use.

• In 2015, the Hawaii Department of Agriculture (HDOA) reported that, out of 16 school evacuations in the last 8 years due to complaints about pesticides, none were due to activities of seed companies.

• A statewide study of 24 surface water sites by the Department of Health found trace detection of pesticides – the majority of which represented minute concentrations that fall far below state and federal benchmarks for human health and ecosystems.

• There is no evidence of higher incidence of cancer on the island of Kauai overall or for specific geographic regions on the island where seed companies operate, as compared to the state of Hawaii.

HDOA has the data on who uses pesticides, where they are being used and how they are being applied. These are the facts that must be considered.

Please vote no on HB 790.

Subject: Regarding HB 790 â€" Relating to Environmental Protection

I am opposed to HB 790. This bill divides the farming community and narrowly targets a small group of well-trained pesticide users.

Bill 790 calls for mandatory buffer zones that could significantly reduce farmable acres. The EPA already registers all products and includes a specific set of conditions for each product based on years of testing. Among these conditions are buffer zones that have been established through science-based evaluation.

There isn't a need for more regulation and I'm concerned about the unintended consequences to the typical farms in Hawaii should mandatory buffer zones be expanded.

Subject: Regarding HB 790 â€" Relating to Environmental Protection

Please accept this testimony in opposition of HB 790.

While I understand the desire to protect schools, hospitals and residential care facilities, this bill is not needed, nor appropriate. The use of pesticides is already regulated by the federal government through the Environmental Protection Agency. Before a pesticide can be sold for commercial use, it goes through many years of health and environmental studies.

As written, the bill provides no evidence to support the need for legislation at this time. Imposing new restrictions on agri-businesses in Hawaii without any type of scientific justification is unfair. Also of concern is the unintended consequence of buffer zones on Hawaii, which could harm farming operations of all sizes, our economy, and Hawaiiâ€™s food security.

For these reasons, I respectfully request that you vote no on this bill.

Federal pesticide regulations already establish clear buffer zones and application restrictions for pesticides--based on actual scientific assessments of any risks, on a case by case basis, from each product.
Adding new state buffers and regulations with no scientific basis at all will reduce the amount of farmable land in Hawaii, and make Hawaii grown food more expensive. All without making anyone safer.
Please reject HB 790.

Subject: Support HB 790!

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Strong Support for HB790 - Pesticide Disclosure & Notification

Cliff DeVries
Palolo Valley

Dear Chair Lee, Vice Chair Lowen and Members of the EEP Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our residents' health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our children at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai‘i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua‘i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

This is a reasonable bill with the recognition that people are more important than large corporations. Why should our people be the testing grounds for Monsanto, Bayer, Dow and other companies with their latest pesticides and insecticides without our people knowing about it. They are spraying chemicals developed from Agent Orange which are still causing birth defects in the Cambodia, Vietnam and other countries. Why should we be penalized with these toxic chemicals because our weather is so good.

Please give us a chance to protect our communities. Thank you kindly for considering my testimony in strong support of the measure.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Support HB 790!

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

Please accept this testimony in opposition of HB 790.

While I understand the desire to protect schools, hospitals and residential care facilities, this bill is not needed, nor appropriate. The use of pesticides is already regulated by the federal government through the Environmental Protection Agency. Before a pesticide can be sold for commercial use, it goes through many years of health and environmental studies.

As written, the bill provides no evidence to support the need for legislation at this time. Imposing new restrictions on agri-businesses in Hawaii without any type of scientific justification is unfair. Also of concern is the unintended consequence of buffer zones on Hawaii, which could harm farming operations of all sizes, our economy, and Hawaiiâ€™s food security.

Pesticide use by farmers and other agricultural professionals are a necessary tool to bring quality product to the market, protect an investment, and keep our food safe. There is no evidence that large scale agricultural operations are any more dangerous for their use of such products; in fact operators and applicators are highly trained, more so that the general public who uses similar products within their homes with no training. In addition this bill singles out agriculture, although the largest user of pesticides is not agriculture, it is fumigation for termites.

For these reasons, I respectfully request that you vote no on this bill.

Mahalo

Comments: Mahalo for the opportunity to submit testimony in STRONG SUPPORT of HB 790. HB 790 is crafted with the intent to protect keiki, human health and the environment by adding a new section (and enforcement teeth) to HRS 149A. This bill will add to HRS 149A-B Pesticide Mandatory Disclosure by requiring: Mandatory disclosure and notification of outdoor pesticide use on affected school grounds; prior notification of parents of children attending that school as well as keeping records of and report pesticide outdoor use. Mandatory disclosure of any commercial agricultural pesticide purchases and in use of all pesticides. It requires public posting of pesticide outdoor application, and MOST IMPORTANTLY public warning signs 24-hours prior to application, including nearby resident notification. Public warning signs will be required to remain posted during outdoor application of any pesticide and until expiration of the applicable restricted-entry interval established by EPA. Requires rules for listing pesticides used outdoor as well as total quantities used for each pesticide along with a description of area where pesticide will be used. This bill grants the Dept. of Health authority to levy fines for each day of violation and grants citizens' right to bring a lawsuit. I urge you to support this bill for the safety of our keiki.

Please note that testimony submitted less than 24 hours prior to the hearing, improperly identified, or directed to the incorrect office, may not be posted online or distributed to the committee prior to the convening of the public hearing.

Rafael Bergstrom	Individual	Support	No

Comments: Aloha, My name is Rafael Bergstrom and I am a concerned citizen who resides in Manoa, on the island of Oahu and I am in strong support of HB 790. While I am in full support of growing our agricultural economy and need for food security on the island, I believe that it must be done with an eye on human and environmental health. Pesticides associated with large scale agriculture raise many questions about their toxicity levels in the air, land, and water. However, as large scale ag continues the use of restricted use pesticides, they are not required to publicly disclose what they are spraying. This is a huge issue in regards to the safety of our public, visitors to the island, and the environment that is the main economic engine for the State. I firmly believe that we should abide by a precautionary principle in all our actions and it is the burden of the those doing business to adequately inform the public about potential risks from their operation - not the other way around. As someone who has worked in water quality testing, if we want to insure that pollutants are not entering our waterways and environment we should have the knowledge to test for chemicals that are being sprayed to see if they persist in regions outside of the application zone. Without this knowledge it is nearly impossible to protect the million plus residents and millions of others who spend time on these islands. We have an opportunity to redefine this industry with a diversified approach to agriculture that carefully considers the impacts of chemicals and the places that they are sprayed. Thank your for your time in considering this important bill. With Aloha, Rafael

Comments: Dear Distinguished Law Makers, I support all your very good bills which will legislate ethically and medically required pesticide shielding, and implementing medical testing for saving our Keiki. Regarding medically determined pediatric (Keiki) damage from neuro-toxicants like chlorpyrifos, methyl mercury, glyphosate, lead, organophosphates, Please click on: View Large Image | View Hi-Res Image | Download PowerPoint Slide Figure 2: Functional MRI scans show abnormal activation in the brain Average activation during finger tapping with the left hand in three adolescents with increased prenatal methylmercury exposure (A) and three control adolescents (B). The control participants activate the premotor and motor cortices on the right, whereas participants exposed to methylmercury activate these areas bilaterally." What if Tom Brady, as a child, had eaten and/or breathed in enough lead, chlorpyrifos, methyl mercury, or glyphosate? If both left and right premotor and motor cortices were activated by the fingers of his right hand, then his footballs would have a very high likelihood (probability) of incomplete and intercepted. However high intelligence scores are correlated to faster and more integrated correct left/right brain to right/left fingers, Thus Tom Brady has a very high probability of making completed passes, and consistently winning. Chlorpyrifos, and glyphosate effect intelligence in a similar way as DDT. "Recent studies have shown INVERSE CORRELATIONS between serum concentrations of DDT or DDE (which indicate accumulated exposures), and neurodevelopmental performance (Lancet Neurol, 2014). Dr. Jim Yong Kim, MD., President of the World Bank wants Hawaii to know: "Evidence from worldwide sources indicates that average national IQ scores are associated with gross domestic product (GDP)—a correlation that might be causal in both directions.99 Thus, poverty can cause low IQ, but the opposite is also true. In view of the widespread exposures to lead, pesticides, and other neurotoxicants in developing countries, where chemical controls might be ineffective compared with those in more developed countries,100, 101 developmental exposures to industrial chemicals could contribute substantially to the recorded correlation between IQ and GDP (Lan Neurol, 2014). "Thus, each loss of one IQ point has been estimated to decrease average lifetime earnings capacity by about €12 000 or US$18 000 in 2008 currencies.... Prevention of developmental neurotoxicity caused by industrial chemicals is highly cost effective. A study that quantified the gains resulting from the phase-out of lead additives from petrol reported that in the USA alone, the introduction of lead-free petrol has generated an economic benefit of $200 billion in each annual birth cohort since 1980,103 an aggregate benefit in the past 30 years of over $3 trillion (Lancet Neurol, 2014) These "exposures in early life to neurotoxic chemicals can cause a wide range of adverse effects on brain development and

maturation that can manifest as functional impairments or disease at any point in the human lifespan, from early infancy to very old age (Lancet Neurology, 2014)." Such molecular chaos (physiological disorder) has also created, as in the case of glyphosate, "a multitude of cancers that are reaching epidemic proportions, including breast cancer, pancreatic cancer, kidney cancer, thyroid cancer, liver cancer, bladder cancer (J Biological Physics and Chemistry, 2016). US glyphosate spraying of foods, may be a major contributor to aggression in US schools (bullying and school violence) since 1990, because this toxin depletes serotonin and tryptophan in the human brain, reports the prestigious physics journal, Entropy, 2013. As the proposed Bill No. 790 states, restricted use "pesticides may volatilize, or change from a solid or liquid state into a vapor state, into the lower atmosphere for days, weeks, or months after the application," and as the US Geological Survey (2011) indicates will continue to drift around at very great distances, from atmospheric and wind dynamics. These are governed by the laws of meteorology, including atmospheric turbulence, the vorticity (swirling atmospheric eddies) theorem, adiabatic (vertical rising& falling of gas from densities changing from heat) lapse rates, etc., which have not been properly analyzed. These effects may average out, but with a likelihood (probability) of at least some collateral health damage. By not urgently and immediately passing pesticide safety bills, the Kauai County and Hawaii State treasuries may be probably (more likely) emptied by impending law suits. Again we have an inverse correlation, like an X. As pesticide concentrations rise inside Keiki [please see the rising line in the x], available county and state treasury funds will minimize [please see the falling line in the X]. Here are related pending urgent law suits against multinationals, who unlike the state of Hawaii and county of Kauai, have unlimited funds for settlements in litigations. 11/9/2016 - GMO king Monsanto has another legal problem heading its way. A federal judge has said that the city of Spokane, Washington's lawsuit against the agro-chemical behemoth over pollution in the Spokane River can move ahead. Learn more: http://www.naturalnews.com/lawsuit.html#ixzz4XRXDYwnT 11/4/2016 - Monsanto is finally being held liable for genetically engineered wheat that was found growing illegally on an Oregon farm in 2013. The "Roundup Ready" wheat genetically modified to withstand applications of glyphosate has been tested in 16 states, including Oregon, from 1998 to 2005, Learn more: http://www.naturalnews.com/lawsuit.html#ixzz4XRXarWBW 8/31/2016 - General Mills is being sued for misleading use of the term "natural" on packages of Nature Valley granola bars, which have been shown to contain residues of the toxic herbicide glyphosate (Roundup). The lawsuit, filed by Moms Across America, Beyond Pesticides and the Organic Consumers Association, Learn more: http://www.naturalnews.com/lawsuit.html#ixzz4XRXmoMHq Marc Fellous, former President of the Biomolecular Engineering Commission (CGB), has been found guilty of forgery and use of forgery to defame Prof Gilles-Eric Séralini. On 22 September a judge in the Criminal Court of Paris found Fellous guilty of forgery and the use of forgery in order to defame Prof Gilles-Eric Séralini and CRIIGEN, a research association which focuses on the risks of genetic engineering and pesticides and the development of alternatives. Learn more: http://www.gmoseralini.org/seralini-attacker-found-guilty-of-forgery-over-monsanto-study-review/ These above court precedent documents, and many more are being transferred to the Hawaii State Judiciary. All we have to do is give Kauai what Dr. Lee Evslin, MD., is asking for to avoid the inevitable massive litigation battles, draining our treasuries, and our spirits. Thank you. Sincerely, Will M. Davis 4215 Hoala St., Apt. 101 Lihue, HI 96766 808-265-1854 willdavis108@gmail.com

Senate Committee on Agriculture and the Environment
Re: SB778
In support

Date: January 29th, 2017

It is an honor to testify for this committee on SB778. My name is Marghee Maupin. I am a Primary Care Provider and Nurse Practitioner on the island of Kauai. I have lived most of my life on Kauai and I have worked in health care for more than 30 years. I have worked on all sides of Kauai island as a health care provider.

My experience and knowledge leads me to strongly urge this Committee and the full Senate to pass SB778 and fund the recommendations of the JFFG, which were developed after an extensive 18-month process by a very qualified panel of doctors and scientists (including agrochemical industry representatives).

When I started working on the west side of Kauai in 2011, I discovered curious patterns of illness that I had not seen before. This prompted me to investigate further if the pesticides on Kauai used largely by the agrichemical companies could cause the unusual patterns of illness. To this day we have not been offered any training in the effects of chronic low level exposure.

The Kauai bill 2491 that was passed in 2013 asked for bigger buffer zones and transparency of what was sprayed where. The "Good Neighbor Policy" was a volunteer effort by the agrichemical companies to offer some transparency. To this day I do not know of any health care provider (including myself) who has found this program helpful to treat or test their patients who they think could be ill because of pesticide exposure. The problem with the policy is it does not show what chemical was sprayed where and when it was sprayed. Also the chemical names in the "Good Neighbor Policy" are long and unfamiliar. They are of no help to me.

I read through the JFFG health report and statistics. I found that the numbers of health conditions on the west side were labeled as not "statistically significant". The people themselves, however, are significant, because they are real people. The west side has the highest incidence (as compared to the rest of the county) of; developmental delays, ADHD, other disabilities, easter seals enrollment, infant mortality, higher incidence in causes for mortality, overall cancer mortality, admissions for pneumonia, COPD, asthma and the highest amount of people on dialysis. As a clinician I felt that I was seeing this unusual trend, but I had no proof.

Phone: (808)635-2082 Website: www.marghee.com

I remember in the 1980's if children lived on the Kauai's north, south or east side of the island, pediatricians would recommend moving to the west side where the doctors had seen asthma improve. The thinking was that the drier climate was prone to not trigger asthma symptoms. To my knowledge, pediatricians on Kauai now discourage asthmatics to the west side, b/c of the apparent higher risk of asthma and allergies that occur on the west side.

The west side population continues to live, in my opinion, in a dangerous environment. There are no comprehensive studies of the west side health problems and of the west side environment. The JFF group was not tasked with collecting new data and the data that exists is slim or nonexistent. Additionally there are disagreements of statistics between the Department of Health and the physicians, which needs to be reconciled.

Something that I found interesting and troubling in the JFFG report from the Department of Agriculture and the Department of Health is that they said that Department of Agriculture totaled fewer that 100 pesticide exposure incidents.

I have made at least 30 calls to the Department of Health and the Department of Agriculture (each agency said that the other was tasked with taking reports of pesticide exposures). I have told both of these agencies (phone, emails) that I wanted to file a complaint/report about a patient that I felt (for various reasons) was ill from pesticide exposure. Both of these agencies would not take a report from me. I made my own form which I did not get any feedback from when I used the report to report a pesticide incident exposure. They told me that the patient had to make the report and that I was not in any position as a primary care provider to file a report of suspected pesticide illness. This included one patient who started to lose consciousness in my office and fell into a coma for a few days. The DOA and DOH said to me "We will take a report from a patient when they come out of the coma". For 2 years I tried to file reports and I was refused. I finally demanded (in a more public setting) that I be sent a report form (I had been asking for report form for the 2 years). The DOH finally did send me a report form from California. I suspect now that there is likely a Hawaii report form.

I did encourage patients to file reports, but they were 1) afraid they'd lose their job, 2) be ostracized by family and friends, 3) their bosses had reassured them that they would never be put in harm's way. I was successful with one patient who recently filed a formal report with the DOA. However, from reviewing the JFFG Report, it's clear that my reports to DOH and DOA have not been recorded.

All these facts underscore the need for a clear statewide policies as recommended in the JFFG Report for statewide pesticide buffer zones, thorough and mandatory disclosure of pesticide use (including what is being sprayed when at a specific location), collection of more accurate health data that helps scientists identify links between pesticides and health impacts, and environmental testing.

The Constitution of Hawai'I says "The states shall provide for the protection and promotion of public health and maintain a healthful environment." I urge you to set a swift time frame to honor the state constitution by allotting the monies of 3 million dollars per year for the next 2 years to comprehensively follow the JFFG recommendations concerning human and environmental health. There is no time to waste. In my opinion, all Hawaii residents deserve real reasons for hope in achieving better health and wellness.

Sincerely,

Margaret Maupin, APRN
Sample Monthly Exposure Data collected by myself and sent to DOA, DOH

Testimony Letter
Support HB 790
February 7, 2017, 8:30am
Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

My name is Nohea Marlow and I am a resident of the Kaimuki area of Honolulu. I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas. This is very important to me because I have small nieces and nephews in schools all over the island and I care very much about their health and wellness, as well as the health of everyone, including myself who are also affected by it. While we know some of the detrimental effects research has found from this use, we still don't know the long-term effects these pesticides will have on our health, and our keiki are especially vulnerable to toxins. Companies should therefore not be unknowingly exposing people to toxins, and especially our keiki. They should have the opportunity to grow up and thrive without the threat of potential health concerns coming from what should be a healthy food source.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neuro developmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai‘i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space. Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua ʻi pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid. Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Sincerely,
Nohea Marlow

Comments: Dear Chair Lee, Vice Chair Lowen and Members of the Committee, I am writing to urge your strong support of HB 790. This bill requires that the state protect the health of our youth and elders by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas. I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled “Pesticide Exposure in Children,” children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma. Currently there are at least 27 schools in Hawai‘i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. The communities who will be affected have a right to know what chemicals agrichemical companies are spraying and request that there be ample buffer space. Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua‘i pesticide disclosure program will ultimately be “expanded” by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it’s impossible to know if the data is accurate and valid. Everyone deserves access to clean air, and if we can help that cause, let's strive to make it happen! Thank you for your time. Much aloha, Donna

HB 790

Hawai‘i’s communities have no choice but to live, work, and commute daily in areas under threat of toxic pesticide drift – and they do not have access to information that would allow them to protect themselves from this vital threat. Children in utero and early childhood who are exposed to low-level restricted use pesticides are at risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma. With agrichemical companies spraying two out of every three days, mandatory public disclosure will ensure that industrial agriculture is held responsible for the potential impacts of its pesticides on human health and the environment.

This bill has my strong support.

Comments: Aloha kakou Honorable Legislators who determine the health of our families, HB 790 will establish public notification requirements when pesticides are sprayed in proximity of schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas. Hawai'i's communities have no choice but to live, work, and commute daily in areas under threat of toxic pesticide drift – and they do not have access to information that would allow them to protect themselves from this vital threat. Children in utero and early childhood who are exposed to low-level restricted use pesticides are at risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma. With agrichemical companies spraying 2 out of every 3 days, mandatory public disclosure will ensure that industrial agriculture is held responsible for the potential impacts of its pesticides on human health and the environment. How can we not provide this for our fellow citizens and families? There is no good reason not to. Mahalo for your sentient consideration, April Lee

Comments: I am writing as a mother and a teacher to urge you to support HB254. I live in an area that experiences a lot of pesticide use, the north Shore of O'ahu. Agribusinesses are applying pesticides with out letting people know what they are and that they could be unwittingly exposed to them. I see crops sprayed near to Kam Hwy. between Wahiawa and Haleiwa and it's often at night when you can't see them and don't know what's happening until you are driving by breathing it in! My son went to Wailua Intermediate and High and they were regularly subjected to pesticide drift. I have taken him out of school and he is homeschooled now. My other son was involved in a lockdown at Kahuku high some years ago when pesticide drift came into the campus. Many times over the past two decades I have been driving on Kam. through the pineapple fields and have been subjected to a truly sickening amount of pesticide spray. In the dark we cannot see and have no chance to close windows or switch off the air intake. The large amount of pesticide use in our area needs to be addressed. Please see to it that these companies disclose what they are releasing onto our land and into our water and air. SB254 establishes disclosure and public notification requirements for outdoor application of pesticides in various sensitive areas or by large-scale, outdoor commercial agricultural operations. Mahalo for your support. Angela Huntemer MEd Kahuku.

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

I oppose this bill as it unfairly targets farmers and agriculture. Farmers are land stewards and they understand firsthand the need for crop protection and pesticides; they live in our communities and their children attend local schools. It's everyone's duty to use pesticides responsibly. Farmers and agriculture are not the enemy.

Mahalo

Subject: Support HB 790!

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Regarding HB 790 â€" Relating to Environmental Protection

I respectfully oppose HB 790. Good public policy must and should be based on facts, and the facts on basic pesticide use in Hawaii are clear.

• The independent Joint Fact Finding Committee on Kauai found no evidence of health or environmental impacts associated with pesticide use.

• In 2015, the Hawaii Department of Agriculture (HDOA) reported that, out of 16 school evacuations in the last 8 years due to complaints about pesticides, none were due to activities of seed companies.

• A statewide study of 24 surface water sites by the Department of Health found trace detection of pesticides – the majority of which represented minute concentrations that fall far below state and federal benchmarks for human health and ecosystems.

• There is no evidence of higher incidence of cancer on the island of Kauai overall or for specific geographic regions on the island where seed companies operate, as compared to the state of Hawaii.

HDOA has the data on who uses pesticides, where they are being used and how they are being applied. These are the facts that must be considered.

Please vote no on HB 790.

Please accept this testimony in opposition of HB 790.

While I understand the desire to protect schools, hospitals and residential care facilities, this bill is not needed, nor appropriate. The use of pesticides is already regulated by the federal government through the Environmental Protection Agency. Before a pesticide can be sold for commercial use, it goes through many years of health and environmental studies.

As written, the bill provides no evidence to support the need for legislation at this time. Imposing new restrictions on agri-businesses in Hawaii without any type of scientific justification is unfair. Also of concern is the unintended consequence of buffer zones on Hawaii, which could harm farming operations of all sizes, our economy, and Hawaiiâ€™s food security.

For these reasons, I respectfully request that you vote no on this bill.

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

My three children will be directly affected by this bill. Our home, as well as my children's school, is within a mile of fields where Restricted Use Pesticides, among other pesticides, are sprayed. We request full disclosure of the pesticides applied so that we can make decisions about whether to close windows or take a different route. We deserve to know whether pesticides are affecting the health and development of our keiki. Our children are our future, and we must do everything we can to protect them and provide them with a healthy environment in which to thrive and succeed.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

I am opposed to HB 790. This bill divides the farming community and narrowly targets a small group of well-trained pesticide users.

Bill 790 calls for mandatory buffer zones that could significantly reduce farmable acres. The EPA already registers all products and includes a specific set of conditions for each product based on years of testing. Among these conditions are buffer zones that have been established through science-based evaluation.

There isn't a need for more regulation and I'm concerned about the unintended consequences to the typical farms in Hawaii should mandatory buffer zones be expanded.

Imposing new restrictions on agri-businesses in Hawaii without any type of scientific justification is unfair. Also of concern is the unintended consequence of buffer zones on Hawaii, which could harm farming operations of all sizes, our economy, and Hawaiiâ€™s food security.

For these reasons, I respectfully request that you vote no on this bill.

Subject: Support HB 790!

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

I am writing to urge your strong support of HB 790. This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Regarding HB 790 â€" Relating to Environmental Protection

Please accept this testimony in opposition of HB 790.

While I understand the desire to protect schools, hospitals and residential care facilities, this bill is not needed, nor appropriate. The use of pesticides is already regulated by the federal government through the Environmental Protection Agency. Before a pesticide can be sold for commercial use, it goes through many years of health and environmental studies.

As written, the bill provides no evidence to support the need for legislation at this time. Imposing new restrictions on agri-businesses in Hawaii without any type of scientific justification is unfair. Also of concern is the unintended consequence of buffer zones on Hawaii, which could harm farming operations of all sizes, our economy, and Hawaiiâ€™s food security.

For these reasons, I respectfully request that you vote no on this bill.

I am opposed to HB 790. This bill divides the farming community and narrowly targets a small group of well-trained pesticide users.

Bill 790 calls for mandatory buffer zones that could significantly reduce farmable acres. The EPA already registers all products and includes a specific set of conditions for each product based on years of testing. Among these conditions are buffer zones that have been established through science-based evaluation.

There isn't a need for more regulation and I'm concerned about the unintended consequences to the typical farms in Hawaii should mandatory buffer zones be expanded.

Subject: Regarding HB 790 â€" Relating to Environmental Protection

I respectfully oppose HB 790. Good public policy must and should be based on facts, and the facts on basic pesticide use in Hawaii are clear.

• The independent Joint Fact Finding Committee on Kauai found no evidence of health or environmental impacts associated with pesticide use.

• In 2015, the Hawaii Department of Agriculture (HDOA) reported that, out of 16 school evacuations in the last 8 years due to complaints about pesticides, none were due to activities of seed companies.

• A statewide study of 24 surface water sites by the Department of Health found trace detection of pesticides – the majority of which represented minute concentrations that fall far below state and federal benchmarks for human health and ecosystems.

• There is no evidence of higher incidence of cancer on the island of Kauai overall or for specific geographic regions on the island where seed companies operate, as compared to the state of Hawaii.

HDOA has the data on who uses pesticides, where they are being used and how they are being applied. These are the facts that must be considered.

Please vote no on HB 790.

This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Regarding HB 790 â€" Relating to Environmental Protection

I am opposed to HB 790. This bill divides the farming community and narrowly targets a small group of well-trained pesticide users.

Bill 790 calls for mandatory buffer zones that could significantly reduce farmable acres. The EPA already registers all products and includes a specific set of conditions for each product based on years of testing. Among these conditions are buffer zones that have been established through science-based evaluation.

There isn't a need for more regulation and I'm concerned about the unintended consequences to the typical farms in Hawaii should mandatory buffer zones be expanded.

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

Please accept this testimony in opposition of HB 790.

While I understand the desire to protect schools, hospitals and residential care facilities, this bill is not needed, nor appropriate. The use of pesticides is already regulated by the federal government through the Environmental Protection Agency. Before a pesticide can be sold for commercial use, it goes through many years of health and environmental studies.

As written, the bill provides no evidence to support the need for legislation at this time. Imposing new restrictions on agri-businesses in Hawaii without any type of scientific justification is unfair. Also of concern is the unintended consequence of buffer zones on Hawaii, which could harm farming operations of all sizes, our economy, and Hawaiiâ€™s food security.

For these reasons, I respectfully request that you vote no on this bill.

I oppose this bill as it unfairly targets farmers and agriculture. Farmers are land stewards and they understand firsthand the need for crop protection and pesticides; they live in our communities and their children attend local schools. It's everyone's duty to use pesticides responsibly. Farmers and agriculture are not the enemy.

I respectfully oppose HB 790. Good public policy must and should be based on facts, and the facts on basic pesticide use in Hawaii are clear.

• The independent Joint Fact Finding Committee on Kauai found no evidence of health or environmental impacts associated with pesticide use.

• In 2015, the Hawaii Department of Agriculture (HDOA) reported that, out of 16 school evacuations in the last 8 years due to complaints about pesticides, none were due to activities of seed companies.

• A statewide study of 24 surface water sites by the Department of Health found trace detection of pesticides – the majority of which represented minute concentrations that fall far below state and federal benchmarks for human health and ecosystems.

• There is no evidence of higher incidence of cancer on the island of Kauai overall or for specific geographic regions on the island where seed companies operate, as compared to the state of Hawaii.

HDOA has the data on who uses pesticides, where they are being used and how they are being applied. These are the facts that must be considered.

Please vote no on HB 790.

Subject: Strong Support for HB790 - Pesticide Disclosure & Notification

From: Howard Hurst
Waimea, Kauai

Dear Chair Lee, Vice Chair Lowen and Members of the EEP Committee,

I am writing In strong support of HB 790. This bill requires that the state protect our residents' health by minimizing pesticide exposure risks.

I have seen first hand the effects long-term pesticide application and pesticide drift are having on our children at schools. I have also witnessed unregulated industry do everything in their power to hide these effects caused by their products and practices. The Dept. of Agricultures willingness to look the other way has been a great injustice against the people of Hawaii.

Advanced notification disclosing pesticide use would give the citizens of Hawaii and health care workers the ability to establish a causative effect including pesticide exposure when diagnosing symptoms. This is why industry is so vehemently against any disclosure regulation. A tertiary review of the voluntary Kauaʻi pesticide disclosure program indicates that more accurate information is needed. There are also discrepancies in the reporting that have gone uninvestigated.

Please give us a chance to protect our communities. Thank you for considering my testimony in strong support of this measure.

Mahalo,

Howard Hurst, M.S.Ed

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

I am writing to urge your strong support of HB 790.

We're tired of corporate excuses of why it's okay to poison poor people. These chemicals have been around for decades, and we know exactly how dangerous they are. Public perception has shifted and now the credibility of science is at stake because of the corrupting influence of industry.

This is not an issue that will go away. Eventually enough people will get sick and die, and the survivors will look for someone to blame for their suffering.

There can be no Economy without ecology.

This bill requires that the state protect our residents' health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas. I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our children at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled “Pesticide Exposure in Children,” children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma. Currently there are at least 27 schools in Hawai‘i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space. Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua‘i pesticide disclosure program will ultimately be “expanded” by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it’s impossible to know if the data is accurate and valid. Please give us a chance to protect our communities. Thank you kindly for considering my testimony in strong support of the measure.

Aloha,
Lucas Ross

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

I respectfully oppose HB 790. Good public policy must and should be based on facts, and the facts on basic pesticide use in Hawaii are clear.

• The independent Joint Fact Finding Committee on Kauai found no evidence of health or environmental impacts associated with pesticide use.

• In 2015, the Hawaii Department of Agriculture (HDOA) reported that, out of 16 school evacuations in the last 8 years due to complaints about pesticides, none were due to activities of seed companies.

• A statewide study of 24 surface water sites by the Department of Health found trace detection of pesticides – the majority of which represented minute concentrations that fall far below state and federal benchmarks for human health and ecosystems.

• There is no evidence of h igher incidence of cancer on the island of Kauai overall or for specific geographic regions on the island where seed companies operate, as compared to the state of Hawaii.

HDOA has the data on who uses pesticides, where they are being used and how they are being applied. These are the facts that must be considered.

Please vote no on HB 790.

This bill requires that the state protect our keiki's health by requiring disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

I am opposed to HB 790. This bill divides the farming community and narrowly targets a small group of well-trained pesticide users.

Bill 790 calls for mandatory buffer zones that could significantly reduce farmable acres. The EPA already registers all products and includes a specific set of conditions for each product based on years of testing. Among these conditions are buffer zones that have been established through science-based evaluation.

There isn't a need for more regulation and I'm concerned about the unintended consequences to the typical farms in Hawaii should mandatory buffer zones be expanded.

Please accept this testimony in opposition of HB 790.

While I understand the desire to protect schools, hospitals and residential care facilities, this bill is not needed, nor appropriate. The use of pesticides is already regulated by the federal government through the Environmental Protection Agency. Before a pesticide can be sold for commercial use, it goes through many years of health and environmental studies.

As written, the bill provides no evidence to support the need for legislation at this time. Imposing new restrictions on agri-businesses in Hawaii without any type of scientific justification is unfair. Also of concern is the unintended consequence of buffer zones on Hawaii, which could harm farming operations of all sizes, our economy, and Hawaiiâ€™s food security.

For these reasons, I respectfully request that you vote no on this bill.

I am deeply concerned with the effects long-term pesticide application and pesticide drift are having on our keiki at schools. According to a 2012 report by the American Academy of Pediatrics (AAP) entitled "Pesticide Exposure in Children," children exposed to chronic, low-level exposure to Restricted Use Pesticides are at a risk of neurodevelopmental disabilities like autism and ADHD, as well as leukemia and asthma.

Currently there are at least 27 schools in Hawai'i located within a mile of fields where agrichemical companies like Monsanto and Dow Chemical spray restricted-use pesticides. Our keiki and faculty in these schools are at a heightened risk of exposure to pesticides that drift from these industrial operations. There is nothing more important than the health and safety of our keiki, which is why we must demand that these agrichemical companies say what they spray and give us space.

Advanced notification disclosing pesticide use would give the school officials a chance to close windows and even move class locations to avoid direct drift contact. While the voluntary Kaua'i pesticide disclosure program will ultimately be "expanded" by the state Department of Agriculture, voluntary programs are an unreliable compromise to mandatory disclosure. There is neither outside verification nor a no hard deadline for submission, so it's impossible to know if the data is accurate and valid.

Please give us a chance to protect our keiki. Thank you kindly for considering my testimony in strong support of the measure.

I respectfully oppose HB 790. Good public policy must and should be based on facts, and the facts on basic pesticide use in Hawaii are clear.

• The independent Joint Fact Finding Committee on Kauai found no evidence of health or environmental impacts associated with pesticide use.

• In 2015, the Hawaii Department of Agriculture (HDOA) reported that, out of 16 school evacuations in the last 8 years due to complaints about pesticides, none were due to activities of seed companies.

• A statewide study of 24 surface water sites by the Department of Health found trace detection of pesticides – the majority of which represented minute concentrations that fall far below state and federal benchmarks for human health and ecosystems.

• There is no evidence of higher incidence of cancer on the island of Kauai overall or for specific geographic regions on the island where seed companies operate, as compared to the state of Hawaii.

HDOA has the data on who uses pesticides, where they are being used and how they are being applied. These are the facts that must be considered.

Please vote no on HB 790.

Subject: Regarding HB 790 â€“ Relating to Environmental Protection

I am opposed to HB 790. This bill divides the farming community and narrowly targets a small group of well-trained pesticide users.

Bill 790 calls for mandatory buffer zones that could significantly reduce farmable acres. The EPA already registers all products and includes a specific set of conditions for each product based on years of testing. Among these conditions are buffer zones that have been established through science-based evaluation.

There isn't a need for more regulation and I'm concerned about the unintended consequences to the typical farms in Hawaii should mandatory buffer zones be expanded.

Dear Chair Lee, Vice Chair Lowen and Members of the Committee,

Please support HB 790 requiring the disclosure and notification of toxic pesticides around schools, healthcare facilities, childcare facilities, elder care facilities, and other environmentally sensitive areas.

I know there is disagreement about whether or not agricultural pesticides are impacting human health in Hawaii. Some facts cannot be denied, though. One fact is that many of these chemicals are classified as "restricted use" because they are dangerous to humans. Another fact is that chemicals can and do "drift" in the wind and cannot be fully contained to the application area. Common sense tells you that spraying restricted use chemicals in close proximity to humans is probably not a good practice.

If the ag companies believe their chemicals and application practices are safe, then they should have nothing to hide. If state regulators really care about the well being of Hawaii residents, then there should be no hesitation in passing this bill into law.

Mahalo.

Please accept this testimony in opposition of HB 790.

While I understand the desire to protect schools, hospitals and residential care facilities, this bill is not needed, nor appropriate. The use of pesticides is already regulated by the federal government through the Environmental Protection Agency. Before a pesticide can be sold for commercial use, it goes through many years of health and environmental studies.

As written, the bill provides no evidence to support the need for legislation at this time. Imposing new restrictions on agri-businesses in Hawaii without any type of scientific justification is unfair. Also of concern is the unintended consequence of buffer zones on Hawaii, which could harm farming operations of all sizes, our economy, and Hawaiiâ€™s food security.

For these reasons, I respectfully request that you vote no on this bill.

Mahalo
