

DAVID Y. IGE
GOVERNOR OF HAWAII

VIRGINIA PRESSLER, M.D.
DIRECTOR OF HEALTH

DEPT. COMM. NO. 151

STATE OF HAWAII
DEPARTMENT OF HEALTH
P. O. BOX 3378
HONOLULU, HI 96801-3378

In reply, please refer to:

December 20, 2017

The Honorable Ronald D. Kouchi,
President and Members of the Senate
Twenty-Ninth State Legislature
State Capitol, Room 409
Honolulu, Hawaii 96813

The Honorable Scott K. Saiki, Speaker
and Members of the House of
Representatives
Twenty-Ninth State Legislature
State Capitol, Room 431
Honolulu, Hawaii 96813

Dear President Kouchi, Speaker Saiki, and Members of the Legislature:

For your information and consideration, I am transmitting a report entitled:

"Requiring the Department of Health to Report Environmental Response Law and Hawaii
Emergency Planning and Community Right to Know Act Financial and Environmental Site
Information FY2017," pursuant to §128D and 128E, Hawaii Revised Statutes (HRS).

In accordance with Section 93-16, HRS, I am also informing you that the report may be viewed
electronically at:

<http://health.hawaii.gov/opppd/departments-of-health-reports-to-2018-legislature/>

Sincerely,

A handwritten signature in black ink that reads "Virginia Pressler".

VIRGINIA PRESSLER

Director of Health

EXECUTIVE SUMMARY

REPORT ON THE ENVIRONMENTAL RESPONSE REVOLVING FUND FOR FISCAL YEAR 2017

Chapter 128D, HRS, Environmental Response Law, and Chapter 128E, HRS Hawaii Emergency Planning and Community Right-to-Know Act

This report, prepared by the State of Hawaii Department of Health (DOH), Environmental Health Administration (EHA), Hazard Evaluation and Emergency Response (HEER) Office, complies with the Hawaii Environmental Response Law (HERL), Chapters 128D and 128E, Hawaii Revised Statutes (HRS) requiring the DOH to report to the State Legislature on the Environmental Response Law and Hawaii Emergency Planning and Community Right to Know Act (HEPCRA).

The report presents the Fiscal Year 2017 accounting of Chapter 128D, HRS, Environmental Response Revolving Fund (ERRF) budget and expenditures for five Environmental Health Administration (EHA) programs. The report also presents an accounting of Chapter 128E, HRS, HEPCRA Tier II filing fees collected and distributed for FY2017.

ERRF Supports Environmental Health Administration

Prior to FY2016, the ERRF funded five Environmental Health Administration (EHA) programs with 31 occupied positions. They are the Hazard Evaluation and Emergency Response (HEER) Office, Environmental Management Division (EMD), Clean Water Branch (CWB), Safe Drinking Water Branch (SDWB), and the Solid and Hazardous Waste Branch (SHWB). Due to rapidly declining barrel tax revenues, the 2015 Legislature changed the means of financing for all 31 occupied positions from ERRF to general funds and eliminated 10 vacant positions, effective July 1, 2015. The legislative changes enacted removed certain uses of the fund, returning the focus to removal, remediation, and detection of oil and pollutant or contaminant releases; and removal and remediation of hazardous waste and any other solid, liquid, or gaseous substance that may harm the environment. Concurrently, the 2015 Legislature reduced the corresponding 2016 appropriations to the affected programs: HEER <\$1,132,230>, CWB <\$324,891>, SDWB <\$457,532>, and SHWB <\$892,793>. The Legislature also adjusted the ERRF ceiling by adding \$213,005 and reducing it by

<\$213,182>. There was an adjustment to add \$224,590 in collective bargaining monies to the fund.

Revenue

ERRF generates revenue in variable amounts during any given year from the fines, penalties, and interest earned by the environmental programs. A primary source of funding for the ERRF is the 5-cent share of the “environmental response oil tax” which levies a \$1.05 tax on each barrel of oil shipped into Hawaii.

The General Fund receives sixty cents of the barrel tax. The Department of Business, Economic Development and Tourism (DBEDT), Energy Security Special Fund and the Energy Systems Development Fund, and the Hawaii Department of Agriculture (DOA), Agricultural Development and Food Security Special Fund receive the remaining 40 cents.

In 2015, the Legislature expanded HRS Section 243-3.5(b)(1) to include other fossil fuels by levying a 19-cent tax on each one million British thermal units (MMBtu) of fossil fuel sold by a distributor. The Department of Taxation (DOTAX) Annual Report states that the tax was levied on 4.8 million MMBtu of non-petroleum fossil fuels in FY 2016. The ERRF is allocated a 4.8 per cent share of this additional tax revenue.

In addition, fines and penalties generated by the Hazard Evaluation and Emergency Response Office, Clean Water Branch (CWB), Safe Drinking Water Branch (SDWB), Solid and Hazardous Waste Branch (SHWB), Clean Air Branch (CAB), and the Indoor and Radiological Health Branch (IRHB) are deposited into the ERRF. Oil tax revenue to DOH in FY2017 was \$1,266,898. Total revenue to the ERRF, including the oil tax revenue, was \$3,802,658.

Budget and Expenditure

The 2017 legislature appropriated \$1,790,391 for operating expenses to the Environmental Management Division (EMD) and Hazard Evaluation and Emergency

EXECUTIVE SUMMARY

Response (HEER) Office. The state expended \$1,047,264 from the ERRF during FY17 for the four programs.

DOH Oil Tax Revenue Declining

The 5-cent per barrel “environmental response tax” revenue to environmental programs is in decline. For fiscal years 2013, 2014, 2015, 2016, 2017 oil tax revenue was \$1,314,717, \$1,294,756, \$1,239,739, \$1,236,065, \$1,287,966, and \$1,266,898 respectively.

2015 Legislative Changes to HRS 128D and HRS 243 to Affect ERRF in FY2016

In July, 2015, Governor Ige signed into law revisions to Section §128D-2 to limit the uses of the fund. In addition, revisions to §243-3.5(b)(1) modified the Environmental Response, Energy and Food Security Tax to add a 19-cent tax on each one million British thermal units (MMBtu) of fossil fuels and to allocate 4.8 per cent of said tax to the ERRF. The change in the means of finance for the 31 occupied positions from ERRF to general funds also took effect in July 2015. Accordingly, the Legislature adjusted the ERRF appropriations to the affected EHA programs. Another provision was that unexpended and unencumbered funds in excess of \$1,250,000 remaining in the fund after June 30 of each fiscal year will be transferred to the general fund. Changes affecting the ERRF have been reported in detail in this Report

Hawaii State Response Program Impacted by Federal Budget Cuts

Because ERRF funding does not fully support the state’s response obligation, the HEER Office implements the environmental site identification, assessment, and cleanup program using combined ERRF, General Fund, and federal cooperative agreement funding. The United States Environmental Protection Agency’s (EPA) budget cuts from 2010 to 2017 resulted in a net loss of \$407,550 to our EPA State Response Program (SRP) grant, reducing funding for both staff and program activities. While the SRP allocation remained stable between 2014 and 2015 at \$980,850, our FY2016 and FY2017 annual allocation dropped to \$936,300. The smaller Preliminary Assessment/Site Investigation (PA/SI) grant which funds site discovery activities has been cut from \$275,000 in 2013 to the 2015 allocation of \$223,000, but has been temporarily restored for FY2018 to \$275,000.

EPA has notified HEER that the SRP grant allocation for FFY2019 is likely to decrease substantially due to a

proposed change in the EPA allocation formula as well as changes in the administration. Future funding levels for PA/SI are expected to drop back to no more than \$225,000 in 2019.

With the decline in oil tax revenue and substantial reductions in federal funding it is hoped that the additional funding from the 19-cent tax on each MMBtu of fossil fuels of which the ERRF is allocated 4.8 percent will help to offset the losses.

The Hawaii State Response Program (HSRP) Site Lists

This annual report presents four distinct Site Lists at the end of this document.

First, per HRS 128D, this annual report identifies Sites Eligible for Possible Remedial Action Under the Comprehensive Environmental Response Compensation and Liability Act (CERCLA).

Secondly, the *FY2017 Hawaii State Response Program (HSRP) Chemical Release Notification Log* lists 568 release notifications managed by the HEER Office State On-Scene Coordinators (SOSCs). HEER identified 369 cases directly related to petroleum releases.

Thirdly, the *Hawaii State Response Program List of Priority Sites* presents all non-military Hawaii sites identified for potential or known non-emergency response actions under HRS 128D. The list shows 568 active sites under direct DOH oversight in the various State programs. This includes 30 new sites added during the last fiscal year, and 26 sites with known or suspected contamination that received No Further Action (NFA) determinations since the beginning of FY2017.

Finally, the *Hawaii State Response Program Defense and State Memorandum of Agreement (DSMOA) Program List of Priority Sites* presents a list of 388 military sites in Hawaii for which HEER’s Site Discovery and Remediation (SDAR) section provides oversight. This includes 10 sites with known or suspected contamination that received NFA determinations.

SDAR provides regulatory oversight of hazardous substance response actions for Department of Defense (DOD) service branches under federal CERCLA authorities and HRS 128D. Sites include numerous high priority unexploded ordnance sites (UXO), and multiple diverse military operations, including tank farms, pipelines, industrial activities and active training sites. A DOD cooperative agreement funds investigation, cleanup and

EXECUTIVE SUMMARY

DOH oversight of most military sites under EPA CERCLA authority. Investigation and cleanup of petroleum-contaminated military sites are exempt under CERCLA, and are conducted under HRS 128D authority. Cleanup and DOH oversight for petroleum related activities are also covered under the cooperative funding agreements.

Hawaii Department of Health Website

Additional information about DOH and its environmental programs is located at: <http://health.hawaii.gov/>. Specific information on the environmental programs may be located through the 'Environmental Health' and 'Emergency Preparedness and Response' drop down menus on the front page, under Health and Safety Topics.

Information about HEER Office activities including recent events, new initiatives, public records, fact sheets and comprehensive guidance documents may also be directly accessed at: <http://eha-web.doh.hawaii.gov/eha-cma/Org/HEER/>

REPORT ON CHAPTER HRS 128D, HRS, ENVIRONMENTAL RESPONSE LAW (HERL)

Environmental Response Revolving Fund (ERRF) Budget Report

The Chapter 128D, HRS, Environmental Response Law (HERL) annual report to the Twenty-Ninth Legislature, State of Hawaii, presents an accounting of Environmental Response Revolving Fund (ERRF) revenue and monies budgeted and expended for implementing environmental protection and response plans and actions.

ERRF Uses

In accordance with HRS 128D, the ERRF may be used for the following:

- (1) Removal, remediation, and detection of oil and pollutant or contaminant releases;
- (2) Removal and remediation of hazardous waste and any other solid, liquid, or gaseous substance that may harm the environment; and
- (3) The payment of expenditures authorized by the Director under section 128D-4, Uses of the Fund.

Special Funding to Attorney General

The ERRF funds legal support from the state Department of Attorney General on a variety of issues including issuing orders to noncompliant parties, negotiating agreements with Voluntary Response Program participants, providing legal guidance on program development and legislative proposals, and developing guidance for property owners on implementation of deed restrictions in accordance with Hawaii's Uniform Environmental Covenant Act.

Annual de minimis Settlements

Chapter 128D, HRS, Environmental Response Law, requires that the department report annually on any de minimis settlements. During FY2017, there were no de minimis settlements.

Four Environmental Health Program Budgets

Four DOH environmental programs share revenue deposited to the ERRF and have access to the following FY17 Legislative Session appropriation amounts with FY18 adjustments: The Hazard Evaluation and Emergency

Response (HEER) Office \$1,363,895, Clean Water Branch (CWB) \$134,505, Safe Drinking Water Branch (SDWB) \$140,541, and Solid and Hazardous Waste Branch (SHWB) \$137,166 for a total FY2018 allocation of \$1,776,107. These FY 2018 allocations for CWB, SDWB and SHWB have dropped substantially compared with the FY2016 allocations, while the HEER allocation has increased from \$1,132,230 in FY2016.

In FY2017 the legislature appropriated \$1,790,391 for operating expenses to the Environmental Management Division (EMD) and the HEER Office.

For FY2017 the state expended \$1,047,264 for the four programs. The operational expenses were for emergency and non-emergency environmental response contractors, salary and fringe benefits, travel, response training, standby and overtime pay, legal services, and Tier II Fees distributed to the county LEPCs.

Fund Revenue

Revenue is generated in variable amounts during any given year from the fines, penalties, and interest earned by the environmental programs, and from the "environmental response oil tax". Additional revenue also is generated from the 19-cent tax on each MMBtu of fossil fuels of which the ERRF is allocated 4.8 percent. The DOTAX Annual Report states that the tax was levied on 4.8 million MMBtu of non-petroleum fossil fuels in FY 2016. Overall, the oil tax revenue is on the decline. Oil tax revenue for the past five fiscal years is as follows: \$1,294,756 (2013), \$1,239,739 (2014), \$1,236,065 (2015), \$1,287,966 (2016), and \$1,266,898 (2017). The current total spending ceiling for the fund is \$1,776,107.

Environmental Response Revolving Fund Revenue – FY2017

HTH 849 and HTH 840

ENVIRONMENTAL RESPONSE TAX	1,266,898
INVESTMENT POOL ACCOUNT	12,514
FEES, NON-COVERED SOURCES (AIR POLLUTION)	350
FEES, FILING OF CHEMICAL INVENTORY FORMS	64,300
FEES, VOLUNTARY RESPONSE ACTIONS	15,007
REFUND/REIMBURSEMENT OF PRIOR PERIOD EXPENDITURES	14,520
VIOLATIONS OF AIR POLLUTION CONTROL REGULATIONS	1,218,857
VIOLATIONS OF HAZARDOUS WASTE REGULATIONS	74,202
VIOLATION OF WATER POLLUTION REGULATIONS	859,100
VIOLATION OF SOLID WASTE REGULATIONS	52,200
VIOLATIONS-DEPOSIT BEVERAGE CONTAINER PROGRAM	13,150
COMMUNITY NOISE CONTROL	35,000

REPORT ON CHAPTER 128E, HRS, HAWAII EMERGENCY PLANNING AND COMMUNITY RIGHT-TO-KNOW ACT (HEPCRA)

Environmental Response Revolving Fund (ERRF) HEPCRA Budget Report

In compliance with Chapter 128E, HRS, Hawaii Emergency Planning and Community Right-to-Know Act (HEPCRA), this annual report to the Twenty-Ninth Legislature, State of Hawaii, 2018 presents the accounting of Tier II fee amounts as follows:

- Amount collected during Fiscal Year 2017
- Amounts distributed during Fiscal Year 2017
- Projected collection for Fiscal Year 2018

HEPCRA Facility Reporting and Fees

HEPCRA facilities are those that store, use, or manufacture above defined thresholds, any hazardous substance, or extremely hazardous substance. An owner or operator of a HEPCRA facility must file notification of such "Tier II" activity and pay a \$100 filing fee annually. HEER Office staff assesses each submitted Tier II report, records the HEPCRA facility data into the EPA Tier II Submit database, and processes the fees for deposit to the Environmental Response Revolving Fund (ERRF).

DOH distributed the deposited Tier II filing fees to the Hawaii State Emergency Response Commission (HSERC) and the Local Emergency Planning Committees (LEPCs) for operating expenditures. The annual amounts distributed to the LEPCs are based on Tier II fees collected from two fiscal years prior and after HSERC operating expenditures have been deducted.

As of June 30, 2017, there are 891 qualifying Tier II facilities. Military facilities must submit Tier II information but are exempt from filing fees.

The HSERC, LEPCs, and HEER Office are continuing efforts to identify and contact possible non-reporting facilities through community outreach and facility inspections.

DOH, HSERC, and the LEPCs would like to thank the Legislature for their support in the successful legislation of the Tier II Filing Fee increase from \$100 to \$200 signed into law in 2017.

Tier II Filing Fees Collected and Distributed – FY2017

FY 2017 Amount Collected	\$64,300
FY 2017 Amount Distributed	\$67,747
FY 2018 Projection of Fees to be Collected	\$140,000

County	Funds Distributed to LEPCs	Number of Qualifying Facilities		
		Non-Military Facilities	Military Facilities	Total Facilities
Honolulu	\$31,130	391	28	419
Hawaii	\$16,476	207	5	212
Maui	\$12,818	161	3	164
Kauai	\$7,323	92	4	96
Total	\$67,747	851	40	891

Blank Page

THE HAZARD EVALUATION AND EMERGENCY RESPONSE OFFICE HAWAII STATE RESPONSE PROGRAM MANAGEMENT AND IMPLEMENTATION

The HEER Office Mission

The mission of the HEER Office and the Hawaii State Response Program (HSRP) is to address all aspects of releases of hazardous substances and pollutants, including oil, into the environment. HEER Office work includes preventing, planning for, and responding to hazardous substance releases, or risks of releases. HEER accomplishes this mission by responding rapidly to new spills and addressing existing contaminated sites with the highest risk to human health and the environment first, preventing contamination rather than cleaning up after the fact, and basing decisions on sound scientific principles and common sense.

The Hawaii State Response Program

ERRF funding to the Hazard Evaluation and Emergency Response (HEER) Office is used for operational costs for the office's implementing program, the HSRP. Three operating sections address important focus areas of the HSRP. They are the 1) Emergency Preparedness and Response (EP&R) Section, 2) Hazard Evaluation (HE) Section, and the 3) Site Discovery, Assessment and Remediation (SDAR) Section.

The HSRP provides for oversight of assessment and cleanup activities during chemical emergencies, and on high and medium priority contaminated sites across the Hawaiian Islands. These include privately owned, municipal, and state owned properties, and federal military sites. DOH has generally curtailed oversight of low priority sites, which pose little hazard, due to state budget constraints.

HEER staff works with property owners, the environmental community, developers, the public, and other state and federal agencies to implement solutions for eliminating risk of chemical exposure to humans and the environment. HSRP examples of work performed are as follows:

- Emergency response to releases of hazardous substances that pose an imminent danger to people or the environment.
- Non-emergency response actions on properties presumed or known to pose a risk to human health and/or the environment because of contamination with hazardous substances.

- Identification and inspection of sites storing and using hazardous chemicals on property.
- Performing ecological and human health risk assessment in the areas of toxicological assessments of chemical threats to human health.
- Establishing appropriate cleanup levels for chemical contamination.
- Assisting the public and responsible parties with access to information such as:
 - Health effects of chemicals
 - Public Record documents
 - Technical guidance and reference materials for cleaning up contaminated sites
- Ongoing development and management of site related electronic records.
- Environmental policy, law, and rule development.

Essential Federal Funding Support to the HSRP

As a result of legislative changes made in 2015, the ERRF no longer funds core operations for the HEER Office, and the General Fund currently supports approximately 40% of the HEER Office state response program obligations. Consequently, the HEER Office relies heavily on three cooperative agreement sources of federal funding to implement the office's mission and the HSRP.

The federal funding sources are the EPA State Response Program (SRP), the EPA Preliminary Assessment/Site Inspection (PA/SI) Cooperative Agreements, and the Department of Defense and State Memorandum of Agreement (DSMOA) Cooperative Agreement. Together, these federal programs provided over 32% of the HSRP funding in FY2017.

The Environmental Protection Agency (EPA) State Response Program (SRP) Cooperative Agreement

The HEER Office continues to receive funding from the EPA State Response Program (SRP) grant under Section 128(a) of the Small Business Liability Relief and Brownfields Revitalization Act (SBLRBRA) of 2002. This SRP grant provides crucial funds for staff salaries, capacity building, and program development activities. The SRP grant awards have been steadily declining from 2011. The SRP grant allocation for the past seven years

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

were \$1,164,542 (2011), \$1,030,350 (2012), \$980,850 (2013), \$980,850 (2014), \$980,850 (2015), \$936,300 (2016), \$936,300 (2017). EPA has notified DOH to expect further cuts for the FY2018-FY2019 grant cycle.

EPA Preliminary Assessment/Site Inspection (PA/SI) Cooperative Agreement

The EPA Preliminary Assessment/Site Inspection Grant funds site discovery efforts combined with federal CERCLA (Superfund) evaluation of sites. HEER staff evaluates and rates sites based on PA/SI system criteria to determine their eligibility for the National Priority List. When a rated site scores too low to be eligible for the National Priority List of Sites, EPA transfers site-oversight responsibility from the EPA to the State of Hawaii. This year, the HEER Office used the \$275,000 PA/SI grant to fund positions, conduct field-screening activities, and fund laboratory costs to complete rapid site screenings that assess residential areas that may have been affected by historic releases of pesticides and other contaminants.

Department of Defense/State Memorandum of Agreement (DSMOA) Cooperative Agreement:

The HEER Office participates in two federal cleanup programs. The office provides oversight services to the military on sites located on federal property and managed and funded under the Department of Defense/State Memorandum of Agreement (DSMOA) Program. HEER Office also manages assessment and cleanup activities for sites delegated to the DSMOA funded Formerly Used Defense Sites (FUDS).

The federal government established the DSMOA program to cover reimbursement of costs incurred by the state in providing oversight services to the Department of Defense (DOD) installations conducting environmental cleanup activities funded under the Defense Environmental Restoration Program (DERP). DSMOA funds are given to the state based on the state's request for advanced or reimbursement payment. The DSMOA Cooperative Agreement funds all staff positions overseeing remedial investigations and cleanups under these two DOD programs.

For FY2017, the state's reimbursement under DSMOA was \$238,000.

Modern Data Management and Hazard Tracking Tools

Residual contamination exists at hundreds of sites in Hawaii. Identifying these sites to ensure that unhealthy exposures are not occurring is a shared responsibility of

the HEER Office and the affected property owners. The HEER Office has converted many of its public records to electronic format to make them easily available to the public in accordance with Hawaii's Sunshine Law.

A HEER/UH MOA for Analytical Laboratory Service

Since 1998, the HEER Office has contracted with the University of Hawaii (UH) to characterize unknown hazardous substances. The successful collaboration allows for quick identification of chemical pollutant unknowns while conducting an emergency response actions. The HEER Office is currently in a five-year contract with UH, effective May 1, 2014 until April 30, 2018. In addition to analyzing unknown substances, the university laboratory staff assists in training and outreach to Fire HazMat teams throughout the State.

Cost Recovery

Chapter 128D, HRS, provides legal authority to cost recover all ERRF expenses for DOH response actions. For FY 2017, HEER Office received \$20,975. HEER Office mechanisms for the cost recovery require charging billable staff time and expenses to the ERRF and include following:

Responsible Party Agreement: DOH recovers oversight expenses for the Honolulu Authority for Rapid Transportation, Honolulu Harbor, Hickam Community Housing, and GASCO cleanup sites in accordance with the terms of their respective Agreements for Remedial Action.

Fast Track Agreement: Parties wishing to receive expedited oversight of investigation and cleanup of low and medium priority sites have the option to enter into Fast Track Agreements, in which they pay oversight costs in return for face to face meetings and expedited document reviews.

Voluntary Response Program Agreement: DOH recovers oversight expenses for VRP and other cleanup sites in accordance with the terms of their respective HRS 128D Part II Voluntary Response Program Agreements for Remedial Action.

Emergency Response Action Expenditures: Money spent for responding to a chemical emergency is cost recoverable, only when expended from the ERRF. State On-Scene Coordinator's (SOSCs) personnel costs are paid from the General Fund and are not cost recoverable.

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

Moneys expended from the ERRF for private emergency responder contractor services are cost recoverable.

Penalties: Penalties are assessable to a Responsible Party for failure to report a release of a hazardous substance, pollutant, or contaminant, or for failure to comply with a departmental or judicial cleanup order.

Blank Page

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

HEER Office Emergency Preparedness and Response Key Actions

The HEER Office is responsible for planning, preparing for, and responding to releases of hazardous substances that may cause immediate and substantial threat to human health or the environment. This major area of responsibility is managed by General-funded State On-Scene Coordinators (SOSCs) trained to enter hazardous atmospheres in self-contained breathing apparatus (SCBA) and various types of personal protective equipment.

SOSCs are back-up personnel to first responder County HAZMAT teams and on 24-hour call.

In FY2017 HEER's SOSCs managed 568 release notifications and performed direct oversight on 234 of those cases.

Notable HEER Office responses during FY2017 include the following:

On May 5, 2017, at the Honolulu International Airport Gate 4 vault, a 24-inch valve connected to an active pipeline was discovered leaking Jet-A fuel in the vault. For about six days, 24 hours per day, vacuum trucks were used to remove fuel from the vault. Cause of the leak were two broken bolts on a 24-inch butterfly valve. Approximately 83,000 gallons released from the pipeline but all the fuel was contained within the concrete vault.

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

On March 2, 2017, a caller notified the HEER Office about Clover Sinkers manufacturing fishing gear on a lot owned by Waipahu Free Will Baptist Church. Kama'aina Kids Waipahu Preschool is located approximately 100 feet from the area where lead was smelted to make fishing lead weights. Without proper controls, airborne lead resulting from smelting can migrate and contaminate nearby properties, posing an exposure concern for children at the preschool. Sampling of the interior of the preschool indicated the presence of elevated levels of lead in one classroom. Access to the affected room was closed off, parents were notified of the results, and cleanup activities were conducted to restore the safety and use of the classroom. This incident has been referred to the Remediation Section for further site assessment.

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

On January 30, 2017, about thirty pounds of mercury spilled from a Venturi meter were collected from an abandoned Piihonua Pumphouse, located in upper Hilo. County of Hawaii Department of Water Supply took responsibility for the clean-up.

On December 19, 2016, at approximately 8:00 a.m., a fire was reported by Young Brothers. A Hi-Lift, a type of container handler, loading an intermodal tank container holding approximately 6,000 gallons of propane onto a barge Kalaenalu headed to Kawaiahao Harbor on the Big Island was on fire. Driver escaped without any injuries. Honolulu Fire Department extinguished the fire. Evacuation of nearby businesses and marine vessels was conducted to protect public safety due to the potential explosive risk. Pier 40 and the harbor was impacted with oil from the Hi-Lift. Cleanup was conducted. Propane tank's integrity for transport was assessed prior to it being transported to AmeriGas in Kapolei; tank's contents were safely off-loaded.

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

On November 23, 2016, colored water extending approximately 300 feet at a channel was reported. Approximately 6,195 gallons of discolored water along with approximately 10 cubic yards of debris was removed from the channel which is under the jurisdiction of the City and County of Honolulu Road Maintenance.

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

On July 2016, Maui Soda and Ice Works released ammonia due to an electrical spike causing the equipment to overheat which in turn caused a relief valve to release pressure. The company attributed that attending an earlier training taught by the Ammonia Safety and Training Institute hosted by the HEER Office prevented a larger release of ammonia.

On September 22, 2106, at the BEI facility in Hilo, a chlorine gas cylinder was leaking. BEI personnel and Hawaii Fire Department responded. A containment vessel was used to contain the cylinder, but the vessel also leaked. The cylinder was put into a water bath to prevent the chlorine gas from releasing into the air. The cylinder was emptied and the chlorine water was tested and disposed of accordingly.

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

On May 6, 2017, a warehouse on Moowaa Street had several reports of a gas leak smell. Honolulu Fire Department arrived on scene and along with HEER office personal. The source was determined to be a container of ethyl mercaptan, which was thought to have been empty. The leak was secured and the container was then transported off scene to be repaired.

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

On February 1, 2017, a child was identified with high lead levels in their blood. Working with the public health nurses from the Dept. Of Health, the HEER office helped to take samples from in and around the residence of the child to investigate possible sources of lead.

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

On June 30, 2017, a single engine Cessna plane made an emergency crash landing into Moanalua Stream near Moanalua Gardens. The plane had an estimated 35-50 gallons of fuel at the time of the crash. Honolulu Fire Department, airport fire rescue, HEER and police were among the various State and Country agencies to respond and unify in response. Everyone board the plane was rescued. The scene was secured and the freeway was accessed for damage. The plane was removed after the response and investigation.

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

Hazard Evaluation Actions and Studies

Key Human Health and Ecological Risk Studies

The HEER Office Hazard Evaluation (HE) Section provides human health and ecological risk assessment, conducts toxicological assessments of chemical threats to human health and our unique tropical ecosystem, establishes appropriate cleanup levels for chemical contamination, and assists the public with information concerning the health effects of chemicals. In addition, Under the authority of Section 321-311, HRS, Environmentally-Related Illness and Injury Surveillance, the HEER Office is required to collect information, including electronic laboratory test results, on Pesticide and Heavy Metal Poisoning.

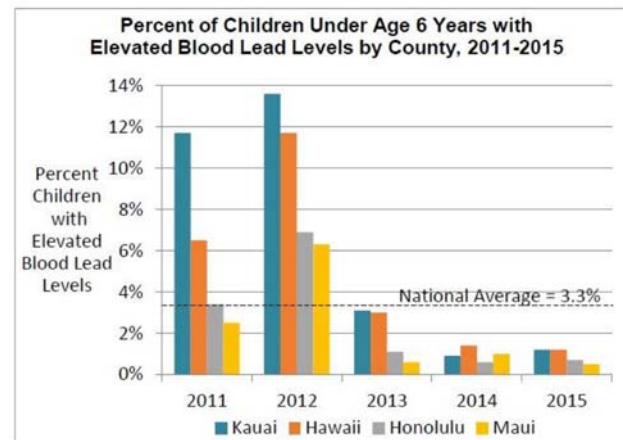

Health Surveillance for Environmental Factors

In FY2017, staff provided risk assessment support and responded to a diversity of inquiries concerning potential health hazards. These inquiries included questions regarding heavy metals (mercury, lead, and arsenic), pesticides, indoor and outdoor air pollutants, and illnesses potentially related to the environment. In addition to inquiries from concerned members of the public, HEER provided active, expert technical assistance to other DOH programs as well as state and local agencies.

Identifying the Need to Rebuild Hawaii's Childhood Lead Program

In 2003, CDC cut funding for Hawaii's childhood lead programs, leaving the state without resources to provide active surveillance of incoming blood lead test results. As a result, for more than a decade surveillance of childhood lead poisonings had been limited to responding to patient and physician requests for assistance.

As an agency, DOH recognizes the importance of identifying and managing cases of lead poisoning in Hawaii, especially after the Flint, Michigan crisis linked to leaching of lead from corrosive pipes. Even one case of lead poisoning is too much. In 2016, despite a lack of program funding or automated tools to interpret the complex data feeds sent to us by reporting laboratories, HEER and DOCD analyzed all children's blood lead levels over the period from 2011-2015.

Data from DOH, Hazard Evaluation and Emergency Response Office, 2017. Blood lead levels at or above 5 micrograms per deciliter (≥ 5 mcg/dL) are considered elevated.

The data for 2011 and 2012 showed unusually high percentages of children with lead levels between 5-9 ug/dl, as well as some significant differences between lead exposures by island during the same time period. Because of the lack of active surveillance during the time frames of concern, the Department could not identify the causal factors for the spikes observed. These findings were shared with the public and state legislators.

Keys Steps Underway to Increase DOH Capacity to Reduce Lead Exposures and Protect Hawaii's Keiki from Lead Poisoning

In FY17, HEER worked closely with Maternal and Child Health and the Indoor and Radiological Health Branches to develop a coordinated plan to expand DOH's ability to rapidly identify and respond to lead poisoning cases with automated tracking tools and additional staff resources.

1. Automated Surveillance Partnering with Public Health and Indoor and Radiological Health Branches

Consulting closely with our DOH Public Health partners, a decision was made to integrate surveillance of incoming heavy metal test results into Maven, the same sophisticated tracking system used by DOH's Disease Investigation and Outbreak Division and Sexually Transmitted Disease programs to identify, track and treat disease outbreaks. In FY17, using funding from the ERRF and the EPA State Response Program grant, HEER worked with the developer to design and begin implementation of the Hawaii Maven lead model. The lead model is currently being tested by the HEER database manager and toxicologist. The new application will allow for

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

active identification and management of lead poisoning cases in Hawaii.

Cross training across DOH programs including Public Health Nursing Branch, Children with Special Health Needs Branch and the Indoor and Radiological Health Branch will ensure that children and adults with elevated lead levels will get the management and assistance needed to reduce the overall lead burden in Hawaii.

2. CDC Award funds critical lead surveillance positions

In part due to the enhanced childhood lead surveillance activities of the HEER office, the DOH Children with Special Health Needs Branch has been awarded \$361,956 through a three-year cooperative agreement funding from the U.S. Centers for Disease Control and Prevention for the Hawaii Childhood Lead Poisoning Prevention Program (HI-CLPPP). Using this CDC funding, HEER will be able to fund a temporary, unbudgeted, full-time epidemiological specialist to coordinate closely childhood lead activities.

3. Legislature Provides Permanent State Funding for New HEER Epidemiologist Position

In addition to the funding provided by the CDC, the Hawaii State Legislature authorized a new Epidemiology position by Act 49, SLH 2017. The Epidemiologist II to be established, will develop, lead, and conduct epidemiological investigations to identify and investigate environmental health concerns by collecting, analyzing, interpreting, and reporting available health data to evaluate whether public health is being harmed.

Environmentally Related Illness and Injury Reporting and Surveillance 2016 Reporting Results

For calendar year 2016, 15,590 children (≤ 6 -year-old) were tested for blood lead levels. Two hundred and five had an elevated blood lead level between 5-9 ug/dl. Another 29 children had an elevated lead level of ≥ 10 ug/dl. The percentage of children with a lead level ≥ 10 ug/dl was 0.18% below the national level of 0.5%. Addresses of children with elevated lead levels have been provided to HUD funded programs in the City and County of Honolulu and the neighbor islands to ensure that landlords receiving state or federal rental subsidies comply with lead based paint requirements.

CDC Warning about Faulty Lead Test Results

In May of 2017, the U.S. Food and Drug Administration and Centers for Disease Control and Prevention warned Americans that certain blood lead tests manufactured by Magellan Diagnostics may provide inaccurate results for some children and adults in the United States. The CDC recommends that parents of children younger than six years (72 months) of age and currently pregnant women and nursing mothers at the time of this alert who have been tested for lead exposure consult a health care provider about whether they should be retested.

The point of care Magellan Diagnostic equipment for blood lead testing is used extensively in Hawaii by the major commercial laboratories. DOH worked with the local labs to ensure that they were aware of the FDA advisory. Other activities included outreach to local medical organizations and press releases informing the public of the advisory.

The CDC Adult Blood Lead Epidemiology and Surveillance (ABLES) Reporting Interagency Agreement

Since 2008, the HEER Office has participated in the Adult Blood Lead Epidemiology and Surveillance program (ABLES) funded by the U.S. Centers for Disease Control and Prevention. Unfortunately, funding for the nationwide program was discontinued in FY 2014. Despite the loss of the contract, Hawaii will continue to provide adult blood lead surveillance data to the ABLES program. Hawaii continues to have very few cases of elevated blood lead levels in adults.

HEER Addresses Statewide Pesticide Concerns

In response to ongoing community concerns as well as recommendations made by the Kauai Joint Fact Finding Group, the DOH and Hawaii Department of Agriculture (DOA), in partnership with other state and federal agencies, have launched three key statewide pesticide initiatives that can be accomplished in the next 12 months.

Environmental Sampling

Surface Water Sampling- To expand upon the 2013-14 DOH/DOA surface water study, DOA has signed a Memorandum of Understanding with United States Geological Survey (USGS) for a \$500,000 surface water quality study. Surface water on Oahu and Kauai was sampled for pesticides before and during storm events to evaluate whether pesticides are moving offsite at unacceptable levels

One hundred and fifty-two candidate sites were considered on Kauai and Oahu, with 57 sites meeting criteria for drainage area, land use and previously collected data. Forty-six samples were collected between September and March at 35 locations using a variety of sampling methods. Samples will be analyzed for 226 current-use pesticides compounds at the USGS laboratory in Denver. Planning is underway for the second year of the study. The study design will include Hawaii and Maui Counties, and will further investigate areas of concern based on 2016-17 sampling results

Interim results will be released after the first year of the project.

Air and Dust Sampling DOH and DOA recognize that airborne dust and pesticide drift are important community concerns. A pilot study conducted by the University of Hawaii and reported in 2013, did not find pesticides in the air next to seed corn operations at health levels of concern. The Agency for Toxic Substances and Disease Registry (ATSDR) has recently weighed in on this issue. In their response to a citizen's request for a public health assessment, ATSDR concluded that environmental air monitoring is unable to accurately define the extent of a community's exposure to agricultural pesticides due to application variables and weather. Because of the complexity of the issue and the difficulty in gathering definitive data, the State is currently seeking recommendations from the US Environmental Protection Agency (EPA) on how to address community air concerns.

Emergency Response Exercises and Training for Pesticides

The state recognizes that effective interagency response to emergencies begins with preparedness. Strong internal and external working relationships will help to ensure public trust and promote an effective interagency response in the event of a high-level pesticide incident. To strengthen and build upon existing relationships and enhance preparedness, DOA and DOH are planning a statewide pesticide exercise through the Hawaii State Emergency Response Commission with other organizations including with the Fire Department/HAZMAT/EMS, Department of Education (DOE), Hawaii Occupational Safety and Health (HIOSH) and county representatives. A proposed scenario involves a pesticide exposure at a school which will include environmental, community and medical response planning, including DOH's Emergency Medical Services

and Injury Prevention System Branch. In September, 2016, a proposal for workshops and table top exercises in each county was presented to the Hawaii State Environmental Response Commission.

The contract and scope of work is in place to conduct a table top exercise for the pesticide scenario for the Fall of 2017 on Oahu and the neighbor islands.

In meeting with the Hawaii State Emergency Response Commission, the Fire Departments identified homeowner misuse as a major cause of 911 pesticide calls. Through HSERC, DOH worked with the Fire Battalion Chief to obtain all malathion nuisance and ambulance calls for Oahu. The Hawaii Fire Department reported 9 responses to residential misuse events in 2016, one impacting an elementary school.

Public Health Education and Outreach

Acute Pesticide Exposure- Migrant Clinicians Network, Recognition and Management of Pesticide Poisonings
DOH and EPA support clinician training for acute pesticide exposure to improve outcomes in local communities. As a result of ongoing community concerns about potential pesticide exposures associated with large agricultural operations, EPA contracted with the nonprofit Migrant Clinicians Network to provide clinical training for acute pesticide recognition and management at Kauai Veterans Memorial Hospital March 6, 2017, providing training to 84 attendees including physicians, nurses, EMTs, fire department, school personnel and agricultural employees. On March 7, 2017, the same training was co-co-sponsored by Hawaii Emergency Physicians Association and provided on Oahu to 45 attendees, including emergency room clinicians and EMTs. DOH partnered with EPA and the MCN to handle local outreach and logistics for the trainings.

Symposium on Children's Environmental Health.

The Hawaii Department of Health used Section 128(a) Response Program funding and received support from EPA's Children's Environmental Health Program to hold a free symposium focusing on children's environmental health risks in March 2017.

The symposium was attended by 111 attendees including pediatricians, nurse practitioners, family practice clinicians, public health nurses, researchers, and public health educators. It was sponsored by the Hawaii Department of Health and Western

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

States Pediatric Environmental Health Specialty Unit in partnership with EPA Region 9, the University of Hawaii School of Nursing and Dental Hygiene, and the John A. Burns School of Medicine, Department of Pediatrics. The symposium educated attendees on the environmental burdens commonly found in children, explained how these burdens can impact children's health, and informed local professionals on what they can do to address children's environmental health problems in the communities they work with.

Hawaii Poison Center (HPC) The HPC operates a 24/7 hotline to assist residents and health care providers. DOH receives data from the HPC on the number and types of acute pesticide poisonings. The HPC is mandated by legislation and is under the auspices of the Hawaii State Emergency Medical Services and Injury Prevention System Branch. Annually, the center receives over 9,000 information and poisoning exposure calls from residents and health care providers throughout the state. Services are provided free of charge every day of the year, 24 hours a day by registered nurse specialists, pharmacists, and physicians specially trained in medical toxicology. The center is operated by the Rocky Mountain Poison Center, Denver, Colorado, an accredited regional poison center by the American Association of Poison Control Centers (AAPCC). The HPC toll-free number is 800-222-1222. As of March 2017, physicians may now report pesticide-related illnesses to the Hawaii Poison Center at 800-222-1222, who will inform DOH on the provider's behalf and provide 24/7 medical advice for management of suspected pesticide exposures.

Per [Hawaii Law HAR 11-5](#), physicians and laboratories must report known or suspected pesticide-related illness and injury to the Department of Health within 24 hours. Historically, this has not happened and the Department has relied on receipt of electronic test results from laboratories.

To facilitate reporting, DOH has contracted 24/7 services with the Hawaii Poison Center (HPC), added resources and a new fillable, reporting form at: <http://eha-web.doh.hawaii.gov/eha-cma/Leaders/HEER/Pesticide-Illness-Reporting>

EMS/Physician Training on Hazardous Chemicals Alvin C. Bronstein, MD, DOH EMS & Injury Branch Chief and former Director of the Rocky Mountain Poison Center, held an EMS/Physician Training on Hazardous Chemicals in partnership with Kapiolani Community College and the Louisiana Poison Center that was attended by 40 people,

representing all islands. Additional pesticide-specific trainings for each of the counties are currently being developed/considered.

Agency for Toxic Substances and Disease Registry (ATSDR) DOH is conferring with the ATSDR on pesticide-related community health concerns raised on Kauai. In their recent response to a citizen request for a public health assessment ATSDR identified a need for education of the local health care community, and have offered to provide assistance.

Birth defects Director Pressler and her staff traveled to Kauai in August, 2016 to meet with west-side physicians to investigate discrepancies they have identified in the birth defects registry report. The birth defects surveillance system in Hawaii is an active surveillance system in which birth defects data are directly abstracted from medical records at hospitals and other medical facilities statewide. Direct reports from doctors are also accepted, and can be an important way to ensure all birth defects cases are recognized and entered

Work done to date by the HEER Office on pesticide concerns can be found at: <http://eha-web.doh.hawaii.gov/eha-cma/Leaders/HEER/pesticides>

Site Discovery, Assessment, and Remediation Cleanup Highlights

Re-development of Contaminated Properties

As significant re-development is occurring on all the islands of Hawaii, the HEER Office continues to focus resources on high priority hazards and development projects that change land uses or may otherwise disturb historic contamination that could pose new threats to human health and the environment. With streamlined guidance and proper oversight, HEER provides key support for multiple development projects to be performed safely. While providing long term protection for communities. For FY2017, the HEER Office accomplished its primary mission with a focus on discovery and oversight of assessment and cleanup activities on high and medium priority sites across the Hawaiian Islands, including privately owned, municipal, and state-owned properties and, federal military sites. Thanks to multiple staff hires, the oversight of low priority sites can finally be addressed as project managers are trained and mentored.

Sites Evaluated for Removal and Remedial Actions

Property owners, responsible parties, and prospective purchasers frequently contact the HEER Office to report releases of hazardous substances, pollutants or contaminants as required by HRS 128D and to assess and manage hazardous substances, pollutants or contamination affecting properties in which they have an interest.

Our general and federally funded state remedial project managers (RPMs) evaluate information provided, and direct investigations to determine the nature and extent of contamination and, if necessary, require remedial actions to protect human health and the environment. To date, 956 sites have been identified and investigated by the SDAR section. During FY2017, the SDAR section, issued a total of 26 No Further Action Letters (11 Unrestricted Use and 15 with Institutional Controls) for State led sites and 10 No Further Action Letters for Military Sites.

Responsible Party Cooperation

The Hawaii Environmental Response Law, HRS 128D, requires responsible parties and property owners to investigate and clean up contamination under the regulatory oversight of the HEER Office. The HEER Office has the authority to issue orders to require investigation

and cleanup of properties that pose an imminent threat to human health or the environment. In instances where there is no responsible party or the responsible party fails to take action, ERRF funds may be expended to complete cleanup activities to protect human health. The HEER Office strives to work cooperatively with responsible parties and property owners, identifying potential hazards and directing investigation and cleanup activities. This collaborative, partnership approach results in more successful and timely cleanups, while conserving fund monies. In 2017, Responsible Parties conducted the vast majority of investigation and cleanup actions on a voluntary basis, without a formal cleanup agreement in place.

A limited number of cleanup actions were conducted under one of three types of regulatory agreements with the HEER Office, described below.

Voluntary Response Program Key Oversight

The Voluntary Response Program (VRP) encourages voluntary cleanup of contaminated properties, and includes a cost recovery mechanism to offset HEER oversight costs. Under Chapter 128D, HRS, DOH has the authority to grant prospective purchasers or developers an exemption from future liability if cleanup is performed to DOH specifications under the program.

Past, current or future property owners can participate in this program, but exemptions from liability can only be given to future purchasers or tenants. Completion of the voluntary cleanup action is accompanied by a Letter of Completion (LOC) issued by the Department of Health and noted on the property deed. To date, 32 contaminated properties have been enrolled in the VRP program. Of these, DOH has issued 27 LOCs for 25 sites, closed one site with a No Further Action (NFA) determination without liability relief, and seen three sites withdraw from the program.

Today, there are four active VRP sites in the program.

Only one application was received in FY2017.

Responsible parties with sites participating in the VRP pay the state for DOH oversight of their remedial activities.

Fast Track Program

The HEER Office Fast Track Cleanup process provides a streamlined approach for property owners to conduct protective, independent cleanups of low and medium priority sites, and improve Hawaii's ability to focus on more serious and complex releases. The program includes cost recovery, providing necessary funding for

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

the HEER Office to provide priority oversight for sites that pose low environmental risks. Forms and information on Fast Track Cleanups (FTC) designed to enable landowners or other private parties to conduct a voluntary investigation or cleanup under a simple agreement with the HEER Office are located at:

[http://eha-web.doh.hawaii.gov/eha-cma/Leaders/HEER/Fast%20Track%20Cleanup%20\(FTC\)%20Information](http://eha-web.doh.hawaii.gov/eha-cma/Leaders/HEER/Fast%20Track%20Cleanup%20(FTC)%20Information)

The most notable Fast Track site to date has been the International Market Place where the remedial action required has been completed and site has been fully re-developed. The No Further Action Letter with Institutional Controls was issued in FY17

Site Discovery Program

Discovery of historically contaminated sites that may pose a threat to current or future users is an important focus area for the HEER Office. HEER Office uses federal funding to locate and sample properties that may have invisible contamination that could cause harm, particularly in the event of residential redevelopment.

Sites are identified by searching historical digital collections of state and national libraries, archives, and museums for maps, aerial photos, and oral histories to assist in locating areas formerly used to store, mix and load pesticides for distribution on sugarcane, pineapple and macadamia nut plantations. In 2017 the HEER Office identified 7 pineapple plantations mixing sites on Molokai, Maui and Oahu. A former macadamia nut plantation on Oahu was investigated in the Round Top area. Since 2007, the HEER Office Site Discovery program has investigated 90 sites statewide, 23 sites have required additional investigations by the property owners. An additional 6 landowners will be conducting investigations with HEER Office oversight and 7 sites are being managed with caps or cover to prevent exposure.

Refining the Proactive Approach to Contamination State-wide

The biggest challenge we face in the HEER Office is that the majority of newly reported releases are the result of historic industrial and fuel handling activities, and tend to occur most frequently in concentrated areas with known areawide contamination, such as industrial centers, harbors, airports, pipeline corridors and historic chemical use and storage facilities. Managing sites individually as releases are reported means that HEER often finds out *after* a problem or release issue has occurred. What we have also found is that risk based closures are much

more feasible to implement as there is limited landfill space in Hawaii and no on-island hazardous waste disposal. In response to these issues, the HEER Office has begun to adopt a broad, proactive strategy to address the discovery, interim management and remediation of sites statewide. The strategy consists of three components:

1. Programmatic/Areawide Environmental Hazard Management Plans
2. Extensive Public Outreach & Material Development
3. Site and Document tracking by the public via iHEER

The combination of these three components allows the HEER Office to address potential sites before they become issues by providing the public at-large with as much information and guidance as possible about potential hazards *before* a release occurs. It also provides consistent, publicly available information about areawide contamination concerns that property owners, tenants, developers and prospective purchasers can use to learn about the HEER Office. Lastly, it allows the HEER Office to manage the plethora of sites being managed long-term with Environmental Hazard Management Plans or other types of engineering and institutional controls. This enables HEER to maintain its services to the public. Here is a brief description of the three components:

Programmatic/Areawide Environmental Hazard Management Plans (EHMP):

There are several areas throughout the State that we know have significant contamination being left in place after remedies have been selected and implemented. Because the residual contamination may still pose a potential risk to utility and construction workers performing sub-surface maintenance and development activities, HEER has developed and provided guidance to these entities to protect their workers as they do construction in contaminated areas. This is the primary role of areawide EHMPs. EHMPs address areas where 1) the type of contamination has been determined through several site-specific investigations in the area and 2) the contingency plans for handling the type of contamination in question are well defined. By providing direction regarding management of the various media (soil, groundwater, soil gas) up front, all entities performing intrusive work in the area will be prepared and equipped to manage hazards they may encounter. This enhances provides better worker safety and reduces the number of

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

incidents requiring response from HEER On Scene coordinators.

Extensive Public Outreach & Material Development:

Environmental Hazard Management Plans and other types of institutional controls are only as effective as the amount of awareness affected parties have. Public outreach and continuing education to all relevant parties (utilities, lenders, State departments, etc.) is required to reinforce what needs to be done and maintain site safety. Meeting with the various stakeholders annually allows the HEER Office to get its safety message out consistently and frequently. HEER Office outreach materials for the various types of contamination (UXO, arsenic, petroleum) on sites are developed and regularly updated keep these important messages fresh in the minds of the public.

Site and Document tracking by the public via iHEER:

iHEER development was significantly curtailed by budget and administrative issues and the designs that were projected to be implemented did not take place. Renewed efforts will be made in the upcoming fiscal year to rectify the situation and complete the site migration that was planned in FY17. Once the initial data has been quality checked, the interface for presenting site status and documents electronically will be enhanced and ready for small scale testing.

Honolulu Rail Transit Project

As drivers along H-1 see every day on their morning commutes, the rail project is becoming a reality. The Honolulu Rail Transit Project (HRTTP) guideways are springing up across the landscape and pre-construction activities are occurring all along the route. The HEER Office maintains close regulatory oversight of the HRTTP to ensure any contamination encountered during construction is managed safely, efficiently and in accordance with state law.

The HRTTP includes construction of 21 rail stations, installation of hundreds of columns to support 20 miles of elevated guideways, extensive utility relocations, a large rail car maintenance and storage facility, and several park and rides.

Construction continues to occur within large areas of known and potential subsurface contamination from a variety of historic activities. Safe management requires

proactive, advanced planning before ground can be broken, and close, ongoing coordination with multiple construction teams on the ground. As previously reported, the Honolulu Authority for Rapid Transportation (HART) and the HEER Office, developed a Programmatic Environmental Hazard Evaluation (EHE) and Environmental Hazard Management Plan (EHMP) as a blueprint for contractors working within contaminated or potentially contaminated areas (Link <http://eha-web.doh.hawaii.gov/eha-cma/documents/ee53f339-8db9-4930-8f1c-67d2d222fc65>). HART began including the EHMP requirements in their contracting documents, so as new contractors joined the project in FY2017, they were held to these protocols.

To address environmental concerns in accordance with the Programmatic EHE-EHMP, oversight of the HRTTP requires ongoing close coordination between the HEER Office SDAR Section and multiple other regulatory authorities. During FY2017, the SDAR Section worked closely with the Solid and Hazardous Waste Branch (SHWB), the Clean Water Branch (CWB), Indoor and Radiological Health Branch (IRHB), and the HEER Office's EP&R and HE Sections. At HEER Office direction, HART sends these programs weekly construction schedule updates. The HEER Office also worked closely with HART to complete research and implement innovative approaches to better delineate contamination at a future station.

During the first quarter, the HEER Office coordinated with the CWB when HART contractors encountered artesian conditions while drilling production shafts along Kamehameha Highway. Since the groundwater release occurred near old pipelines, it was initially reported to the HEER Office and CWB. Luckily, no release of contamination was observed, so HART contractors worked with CWB to update their best management practices and prevent future releases of groundwater. Communication between the CWB and HEER Office continued as HART began grading in additional, potentially contaminated areas near a stream.

During the second quarter, the HEER Office coordinated with HART, the Navy, DOT Highways, and the SHWB about plans to perform characterization at the Urban Garden Centers site. The Navy and the HEER Office were involved in the review because the characterization area includes part of a former military pipeline release site. DOT Highways was involved because land in this location will be used to expand the width of Kamehameha

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

Highway and accommodate traffic after rail is constructed within the roadway.

Much of the coordination this past year occurred during environmental work at various station locations. During the third quarter, the SDAR and EP&R Sections of the HEER Office responded to several releases related to unknown pipelines, unknown tanks/structures/cesspools, and asbestos-containing materials (ACBM) during station construction in the Pearl City Area. The SHWB and IRHB met with HART and the HEER Office to ensure the ACBM was managed safely, prudently, and cost-effectively.

Throughout this fiscal year, the SHWB and HEER Office also assisted HART with pre-construction environmental work at the Lagoon Station site. The Lagoon Station will be built on a former gas station that was already remediated and a former dry cleaner with known environmental problems. HART intended to complete characterization and remediation of the former dry cleaner site before construction began. This would simplify the management of the contaminated soil and groundwater for the construction contractors, increase construction worker safety, and save money charged by construction contractors for “special handling” of contaminated media.

Preparing the Lagoon Station site for construction was quite complicated. At the former dry cleaning site, HART and previous property owners had completed several rounds of sampling. Sample results indicated high concentrations of contamination from dry cleaning

solvents were present in soil vapors, but soil and groundwater samples could not identify the source of the vapors. Vapors can cause problems for indoor air inside the future station and mechanical rooms that will be built at the site. However, it is not possible to remove the vapor problem until locating high concentrations of solvent source in soil and/or groundwater.

HART allowed the HEER Office HE Section to access the site to complete a large sample volume soil vapor research project. The data generated from the research project helped the HE Section document the value of large vapor samples, helped the SDAR Section confirm that there was a soil vapor risk at the site, and helped HART better identify the source location. Results received during the second quarter of the fiscal year confirmed a vapor risk and suggested that the vapor source was near the center of the site.

To better target source removal efforts and minimize the volume of soil that would be disposed, HART and their contractors developed an innovative 3-dimensional soil sampling approach. The SHWB and HEER Office worked closely with HART to review sample results and oversee removal actions at the former dry cleaner.

Contaminated soil was removed in January 2017. To save more budget and prevent waste, excess soil from other rail project construction was used as fill to restore the site. In May 2017, HART submitted a Draft Remedial Action Completion Report for the SHWB and HEER Office to review. The site-specific EHMP included in the report will help construction contractors safely and efficiently manage the remaining environmental issues at the site.

Innovative Approach – DOH and Contractors Collect Large Volume Vapor Samples at the Former Al Phillips Site.

More Innovation – Rail Contractors collect 3-D Multi-incremental Samples at the Future Lagoon Station December 2017

Contractor Measures the Depth of the Excavation to Ensure Enough Contaminated Soil is Removed at Lagoon Station.

SHWB and HEER Office Oversight of Soil from Other Rail Construction Locations Used as Fill at Future Lagoon Station

Future Pearl Highlands Station January 2017 – HEER Office Coordinated with IRHB after Asbestos-Containing Material was Identified at this Site.

HEER Office SDAR and EP&R Sections Responded to Buried Structure and Sheen on Groundwater at Future Pearlridge Station

Unexploded Ordnance (UXO) Issues Throughout the State

UXO continues to be one of the main contaminants of concern throughout the State. Over the past decade, several Formerly Used Defense Site (FUDS) UXO investigations have taken place throughout the State, highlighting the number and severity of the UXO problem. Many of the areas being investigated are high-traffic areas by the public (Maunawili Trail, Hapuna Beach, Goat Island, Ahihi Kinau, etc.) and as there is no way to ensure 100% clearance of a UXO site, these sites present a potential danger to the public at-large. The HEER Office has continued to be actively engaged in public outreach in the affected communities and with State and local authorities to inform the people of the hazards of UXO.

The HEER Office continues to partner with Federal, State and local entities to design signage that incorporates historic, cultural, and safety messages at high profile public venues like Hapuna Beach, Ahihi Kinau, and Maunawili Trail.

The HEER Office is in the final stage of revising its areawide UXO EHMP for the Waikoloa Maneuver Area and is scheduled to release it to the public in late 2017. Public outreach efforts will be done to increase awareness of the areawide EHMP to those in the

affected area. Other FUDS will be targeted for areawide EHMPs to ensure protectiveness of the public and environment after removal actions have occurred. The HEER Office continues to evaluate the need for a State-run UXO program and will be bringing in experts from across the country to train and educate HEER staff on the latest trends and technology.

Re-development of Various Properties Across the State

Because land re-use and re-development is critical when living on an island,, the HEER Office dedicates its time and resources to assist private parties in their endeavors. The most recent projects that have been completed or are close to completion include but are not limited to Symphony Park, International Marketplace, and the Honolulu Advertiser Building. In addition to these projects, the HEER Office has assisted the City and County of Honolulu in researching potential parcels for use as transitional housing.

The HEER Office has had a longstanding relationship with DBEDT and continues to assist DHHL, DOT, DOE, and other State departments in providing guidance and oversight for their projects (e.g.- Voice of America, Kapalama Container Yard, Radford High School). The HEER Office strives to assist its fellow State Departments in ensuring the safety of the sites and designing long

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

term remedies that allow for potential re-use/re-development.

High Priority State Sites

A key role of the HEER Office is to identify sites where current or projected exposures to hazardous chemicals could pose a threat to public health or the environment. These sites receive high priority designations. In 2016 there were 69 high priority sites in the Hawaii State Response Program. Examples of major progress on high priority sites are described below:

Factory Street

The Factory Street Lead Site is a site with lead contamination in a mixed commercial/industrial area that was closed in the 1990s when the highest concentrations of lead were excavated and residual contamination was paved over to prevent exposure to residents and workers. The street (including the shoulder area) is a property with unknown ownership and therefore questionable assignment of responsibility for maintenance. The City and County maintains the street, but does not own it. HEER revisited the Factory Street Lead Site in 2016, conducted a site walk, and made the determination that Factory Street needed pavement repair prevent potential exposure to high concentrations of lead. Owners and residents were contacted to determine actual property lines in an attempt to determine responsibilities for maintenance of the shoulder area. An exposed soil area was identified as posing a potential threat to human health and the environment and was tested by HEER Office personnel for lead using a modern (multi-increment) sampling technique for representative lead data collection and risk assessment, but was determined to have low lead concentrations. In March 2017, HDOH conducted a public outreach event to inform the residents in the area of the condition of the degrading road and potential for lead exposure, to update them on the planned path forward regarding remedial investigation and paving, and to provide information on how they can prevent children from being exposed to lead. The HEER Office prepared a sampling and analysis plan for assessment of the area to determine nature and extent more clearly vertically and horizontally, characterize risk to residents and utility workers, and determine waste disposal volumes and options. The Site Assessment was planned for and executed by HEER's non-emergency contractor in July 2017 and the plan presented to the public via the Kalihi

Neighborhood meeting and notices to owners and residents in the assessment area.

The HEER Office initiated discussions with different departments of the City and County of Honolulu in 2016 to ensure safe working and living in the area. In response, the City and County patched the travel way of the road in the area of highest lead concentrations. Identification of responsibility for the release and maintenance of the street and shoulder areas is ongoing. Near future plans for the street were an interim action (paving) and an Area-Wide EHMP for the Area that is being prepared by the HEER Office. The EHMP will enable the City and County to conduct paving and water and sewer line replacement in a safe manner.

Radford High School Track & Field and Makalapa Elementary School

EHMPs for both schools have been submitted and implemented ensuring the protection of students and faculty. A Remedial Investigation on the Makalapa campus and uninvestigated areas on the Radford campus by the US Army Corps of Engineers to determine the nature and extent of the buried debris is complete and a report of its findings is projected to be ready by the end of 2017.

Iwilei Areawide Contamination

Because of extensive historic petroleum contamination in subsurface soils dating back to territorial days, Honolulu Harbor remains one of HEER's top priorities. Work is underway at a number of high priority sites, including:

BHP GASCO Benzene Site/Dole Cannery Building Site, Oahu

A Remedial Alternatives Analysis is slated for the Dole Cannery building as the pilot test of the soil vapor extraction unit has proven to be successful. The HEER Office is currently engaging Weston Solutions in discussions related to the long-term management/end point for the site post-remedial action.

Iwilei District Participating Parties (IDPP) Enforceable Agreement for Areawide Contamination

The Iwilei District Participating Parties (IDPP), LLC, has completed intensive investigation and early cleanup actions for their areas of responsibility in Honolulu Harbor. Public participation and remedy selection is now complete for all major Operable Units (OU). IDPP continues to implement the remedies and response actions approved by DOH to manage residual petroleum

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

contamination in subsurface soils. These include free product removal, infrastructure repairs and a variety of institutional and engineering controls required to ensure long-term protectiveness of the remedies for future generations and the nearby marine environment. The HEER Office continues to oversee the long-term management of all the OUs and continues the following ongoing activities to ensure the protectiveness of the remedies selected.

- Site-specific EHMP implementation for investigated areas and Areawide EHMP implementation on areas where no investigation has taken place.
- Partnership with DOT to provide guidance for new tenants as they perform intrusive activities near any of the OUs
- Continued outreach to affected stakeholders. In order to reach tenants, utilities and property owners planning excavation activities within IDPP Hazard Management Areas, IDPP is conducting multiple outreach meetings to provide guidance and direct construction support for safe management of contaminated materials. The presentation materials include standard operating procedures for safe management of petroleum impacted soils during construction activities, including excavations, dewatering, soil disposal or re-use, and worker protection.

Continued oversight of Federal Facilities on the National Priorities' List (Pearl Harbor Naval Complex & NCTAMS)

Pearl Harbor Sediments

The Remedial Investigation and Feasibility Study (FS) identified various areas with sediments contaminated with total PCBs and metals and remedial alternatives were evaluated and proposed.

The preferred remedial alternatives identified in the FS evaluation, and presented for public comment in a Proposed Plan and Restoration Advisory Board meeting were as follows:

SE-1 (Southeast Loch) - Focused Dredging with Enhanced Natural Recovery (ENR), Activated Carbon (AC), and Monitored Natural Recovery (MNR) (20 years)
N-2 (Oscar 1 and 2 Piers Shoreline) - ENR with MNR (10 years)
N-3 (Off Ford Island Landfill and Camel Refurbishing Area) - ENR
N-4 (Bishop Point) - ENR
E-2 (Off Waiau Power Plant) - Focused Dredging with MNR (10 years)

E-3 (Aiea Bay) - MNR (10 Years)

Based on available data collected in a 2017 field investigation, the remediation footprint in various areas for different technologies have been refined. Dredge volumes have been reduced from 24,000 cubic yards (cys) to 18,000 cys for SE-1 and 7,800 cys to 4,200 cys in areas off E-2 in East Loch. Areas for ENR (placement of thin-layer of sand to enhance natural recovery) is reduced from 39 acres to 29 acres. Estimated total cost for the preferred remedial alternatives has been refined to \$49.3 million from the original \$60.6 million cost. Additional potential cost-savings is pending based on data that is in-progress from the remedial design field investigation. The Navy will finalize the report documenting the result of the additional remedial design field investigation.

The Navy submitted the draft Record of Decision (ROD) for regulatory reviews and has addressed all regulatory comments. Currently, Navy is preparing the draft final ROD which will be available for review by internal Navy technical team, legal, and regulatory partners. Navy will incorporate the results of the additional remedial design field investigation into the Draft Final version of the ROD for review by regulatory agencies including EPA's Administrator, National Remedy Review Board and Contaminated Sediments Technical Advisory Group.

The Navy continues the under-pier Treatability Study in SE-1 to evaluate the effectiveness of activated carbon amendment. The progress of the TS has been monitored by EPA and DOH.

The Navy continues to work with EPA and DOH to ensure that the communications with HECO (as the potentially responsible party) continue to progress for the Waiau Power Plant final remedies.

Former Aiea Laundry Facility:

The Remedial Investigation and Feasibility Study (RI/FS) for this site has focused on four principal investigation areas:

Former Aiea Laundry Facility area (i.e., the "Laundry Area"): a paved 1.25-acre parcel that was the location of a former Navy laundry,
St. Elizabeth Church and School property: borders the Laundry Area to the north
Backyard Area: a 2-acre partly paved, partly grassy Navy-owned open lot bordering the Laundry Area to the northeast

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

Nearshore Area/Intertidal Zone: area along Pearl Harbor's Aiea Bay shoreline, a mostly open-space area approximately 1,300 feet southwest of the Laundry Area. The Laundry Area is currently used as a parking lot by the St. Elizabeth Church and School, which is an active institution. The Backyard Area is currently unused, and the Nearshore Area/Intertidal Zone is used for recreation.

Contamination was found in groundwater and soil vapor; off-site migration has occurred.

The impact to groundwater is within an acceptable risk range and contamination is being attenuated in the environment. No remedy is necessary to protect human health and the environment since the groundwater is non-potable, detected contamination is at levels that do not pose an ecological risk, and the human health risk assessment did not identify any unacceptable risks to current or future receptors. Groundwater data show that contaminants are being degraded onsite. Groundwater monitoring will be conducted periodically to confirm that the reduction in contaminant concentrations continues.

Risks associated with soil gas is acceptable at the site and off-site areas (i.e., St. Elizabeth Church and School). Based on the Treatability Study, the soil vapor extraction system is effective in managing the contaminant migration toward the St. Elizabeth Church and School and is reducing contaminant mass in both the Laundry Area and the Backyard Area. Further action was recommended to address soil vapor at the Laundry Area and the Backyard Area for potentially unacceptable risk to a future hypothetical residential scenario should vapor intrusion occur. The preferred remedial alternative, identified in the FS evaluation and to be presented for public comment in a Proposed Plan and Restoration Advisory Board meeting, is Targeted Soil Vapor Extraction, Monitoring, and LUCs.

East Gulch Disposal Area, NCTAMS PAC 2015 Action Memorandum to document for the Administrative Record (AR) and 2017 Status Update, the decision by the United States (U.S.) Department of the Navy (Navy), Naval Facilities Engineering Command, Hawaii, to undertake a time-critical removal action (TCRA) to address debris and probable contaminated soil on the mid-to-upper slopes of the East Gulch. The waste materials discovered (empty degraded drums, vehicle remnants, military and vehicle batteries, etc.,) were dumped over the edge of the hill, falling down the slope and into the gulch. During a 2010 Site Inspection (SI), discrete surface soil samples

were collected in downgradient areas of the waste material. Soil sample results indicated total petroleum hydrocarbons (TPH)-diesel range organics and TPH-lube oil range organics, polynuclear aromatic hydrocarbons (PAHs), and metal levels exceeding screening criteria in the samples collected. Due to these exceedances, the Navy performed an addendum to the SI to determine whether the contamination from these past disposal practices had migrated to the soil and stream at the bottom of the site. Surface soil samples, surface water samples from Poamoho Stream and sediment samples were taken and the results from the SI Addendum revealed no exceedances. And because of the outcome, the Navy proposed no further action for the lower portion of the site near to the stream. Prior to conducting a Remedial Investigation (RI) for the mid to upper gulch slope, debris removal was necessary to allow access to soils beneath. Approximately 3 acres were surveyed for vegetation clearance. In April 2016, vegetation and debris were cleared on the steep slopes prior to collecting soil samples. Spider excavators were used for this effort and a crane lifted materials for disposal to the top of the gulch. Incremental Sampling Method (ISM) confirmation sampling was performed. The samples were analyzed for PAHs, polychlorinated biphenyl (PCBs), chlorinated pesticides, gasoline and residual range petroleum hydrocarbons, and metals. The soils exceeding site cleanup levels (RSLs and EALs) were excavated and once confirmation samplings exhibited that the cleanup goals were met, hydro mulch with an organic tackifier were used to restore and stabilize the exposed soil areas. The site is presently being monitored until vegetation grows back.

Approximately 69 tons of debris was separated for disposal. Five 95 gallon overpack drums of batteries were recycled at Burlington Environmental, in Kent, WA. Asbestos-containing materials and other mixed debris waste were disposed of at PVT landfill in Nanakuli. Tires were disposed of by Unitek Solvent Services, Inc. The 15 excavated drums of soil, along with other waste streams that were characterized as hazardous waste were transported and disposed of at Burlington Environmental in Kent, Washington. Now, with the completion of the TCRA, the confirmation sampling results will be included in the RI report being prepared for the site. The draft report will be available in late 2017.

Multiple Record of Decision (ROD) documents signed

During FY 17, six sites within the Pearl Harbor NPL had RODs that were signed and completed. Among those sites were:

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

1. JBPHH, Lualualei Annex, Old NRTF Landfill (draft final reviewed)
2. JBPHH, NMC EAD DPH, West Loch Annex, West Loch Otto Fuel Waste Storage Area (signed final)
3. JBPHH, Wahiawa Annex, Site 21, Abandoned Firing Range (signed final)
4. JBPHH, Pearl City Peninsula, Open Area Near Building 992 (signed final)
5. JBPHH, Lualualei Annex, Site 23, Building 4 Sump (signed final)
6. JBPHH, West Loch Annex, Vehicle Maintenance Facilities Site (signed final)

Three other sites were given a No Further Action determination:

1. JBPHH, Public Works Center GSA, Former Makalapa Pesticide Rinsate Pit
2. JBPHH, Wahiawa Annex, Above Ground Storage Tank Spill at Former Building 63
3. JBPHH, Shipyard Geographic Study Area, Area North of Building 1754

State Oversight of Military Munitions Response Program Sites (MMRP)

The MMRP was created in 2001 and involved all branches of the military creating an inventory of formerly used/closed ranges across the country and its territories. These sites were put into the CERCLA process and are currently being addressed by the respective branches. Sites on properties that are no longer under the control of DoD and were transferred prior to October 17, 1986 are handled by the US Army Corps of Engineers under the Formerly Used Defense Site Program (FUDS). The majority of the MMRP sites currently under investigation in the State are part of the FUDS program (37 active projects). The most prominent of those sites are listed below:

Waikoloa Maneuver Area

The Waikoloa Maneuver Area is the largest FUDS site in the nation (120,000+ acres), with a cost of \$700+ Million to complete. The annual operating budget for WMA is \$10 million, it will take decades to complete. The site is sectioned into 22 different areas/sectors. This year the US Army Corps of Engineers are in the final stages of completing 8 areas and has fully completed one of the areas. A number of USACE contracts have been awarded in this area. In the coming year, we will be seeing many of the projects moving towards completion.

Unexploded Ordnance Conference

On November 30, 2016, the Hawaii Department of Health (HDOH) sponsored its first Unexploded Ordnance (UXO) conference titled "Solving the UXO Conundrum" it was held on the Island of Hawaii. The conference was well attended by Federal, State, County officials, property owners, resort owners/managers, elected officials, munitions contractors, and the interested public. The conference key note speakers were James C. King, Department of Defense, Director for Munitions and Chemical Matters; Brian Stepp, Vice President, Munition of Explosive Concern Division GSI. The event featured number of senior government speakers on interactive panels, fielding questions from the audience. The attendees to the conference were directors, chairpersons, deputies, chiefs, and supervisors from various Federal, State, County and private agencies. The conference addressed the US Army Corps of Engineers process for clean-up of the formerly used Defense Sites Areas (FUDS) and what is the level of acceptable risk for people to work and live in these FUDS. A draft Area Wide Environmental Hazard Management Plan (AEHMP) for the Waikoloa Maneuver Area (WMA) was presented to the audience. The purpose of this redraft was to incorporate the input and concerns from the conference and improve the Area Wide Environmental Hazard Management Plan (AEHMP) for the Waikoloa Maneuver Area (WMA) as a user-friendly guidance document. The AEHMP is critical in addressing the funding issue for affordable housing projects within the Waikoloa Maneuver Area.

Development of Other Programmatic Approaches to Managing Areawide Contamination Across the State

In addition to the Iwilei Areawide EHMP, HEER has developed new Areawide EHMPs in areas on the Big Island and Maui. A draft of the Kahului Harbor EHMP was completed in May 2016 with a finalized version to be completed by November 2016. A draft Waikoloa Maneuver Area EHMP has been reviewed by the US Army Corps of Engineers and went out for public comment after being previewed at the UXO Forum.. Other areas such as Hilo Harbor are being evaluated to determine whether an areawide EHMP is appropriate to address widespread contamination.

Petroleum Oil Terminal Environmental Hazard Management Plans (EHMPs)

Because the UST Section of the SHWB only regulates UST and not ASTs, the HEER Office manages active fuel

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

terminal sites to investigate previous and current releases. Two of the terminal sites in Honolulu are the Former Chevron Honolulu Terminal Marine (HTM) and the Former Shell Honolulu Terminal Site. The former transitioned in 2016 from Chevron to Island Energy Services (IES), LLC. The latter is currently operated by Aloha Petroleum. Both sites had releases over many years and are operating remedial systems. Chevron prepared a Remedial Endpoint Analysis for the HTM which is currently being revised after discussions with the HEER Office and seeks to stop active remediation, but is operating under an approved EHMP. An EHE/EHMP has been prepared for the Former Shell Terminal but not approved due to data gaps in the Conceptual Site Model (CSM). During this fiscal year, for both sites semi-annual monitoring reports were prepared. An LNAPL Transmissivity Study was prepared for the Shell Honolulu Terminal in October 2016 to close the data gap regarding mobility of LNAPL at the site. A work plan for sub-slab vapor assessment was prepared to close the data gap to assess risk for potential vapor intrusion at that site for a building close to the main mass of LNAPL at the site. The vapor assessment was conducted in June 2017. Interim site-specific EHMPs have also been drafted for former Chevron (Now Island Energy) petroleum oil terminals in Kahului Harbor on Maui, Hilo Harbor on Hawai'i Island, and at Port Allen on Kaua'i. Aloha Petroleum has also drafted Interim site-specific EHMPs for their terminals in Hilo, Hawai'i Island and in Kahului Harbor on Maui. The EHMPs serve as comprehensive summaries of all known soil and/or groundwater contamination issues at the terminal sites and provide details on plans for cleanup or management of oil contamination known. The EHMPs also provide an analysis of existing data gaps to be addressed in the future or as opportunity may allow. We anticipate periodic meetings with the three major oil companies to continue to update/revise and fill data gaps identified in the initial Interim EHMPs for these facilities.

Industrial Harbor Areas and Hazard Characterization/ Pollution Pathways Data Compilation and Mapping In 2016-2017, the HEER Office worked on the development of a database summary and GIS mapping initiative focused on industrial harbor areas. The goal of this project is to provide a useful management and planning tool that addresses known/historic contamination details, the presence of large chemical storage tanks and transport pipelines, as well as various potential pathways for spilled or leaked chemical to travel "offsite" from facilities or to the ocean. Kahului Harbor was chosen to develop a model that could then

be applied to the other harbors in the state. The initial Kahului Harbor data summaries and maps were completed, and they will be further refined and amended as the HEER Office utilizes this resource and additional information becomes available. Hilo Harbor has been selected as the second harbor area of data compilation and mapping, and this work is underway. This information will also provide important support for the development and targeting of areawide EHMPs within the harbor areas. The EHMPs will in turn provide environmental hazard and planning information for utility companies and others who may be digging in public rights-of-way or on private easements in the harbors and encounter contaminated soils or groundwater.

Brownfield Success Story: Cleanup Completed in FY2017 for the Former Kohala Sugar Company Pesticide Mixing Site

The former Kohala Sugar Company Pesticide Mixing Area supported historic sugarcane production operations in the Kohala District of Hawaii Island. The company closed operations in 1975. Soil at the former pesticide mixing area presumably became contaminated as a result of chemical spills, mixture runoff, and rinse water discharge over many years of pesticide mixing and loading. Arsenic and dioxin contamination was present in areas of about one quarter of an acre to a depth of up to 10 feet below ground surface.

The pesticide mixing site is on a larger parcel owned by the non-profit Hawaii Community Development Corporation (HICDC) which is developing single family affordable housing units. Unfortunately, the pesticide mixing area located in a gully on one edge of the property was not discovered during HICDC's due diligence to purchase the property.

After gathering and addressing public input on a proposed remedy for the contaminated soils, the HEER Office approved a final cleanup action plan for the pesticide storage/mixing site located near Hawi town. The approved cleanup plan called for excavation of all contaminated soils above relevant DOH environmental action levels and disposal at the West Hawaii sanitary landfill. A detailed work implementation plan was approved by the HEER Office in June 2015, and 2,685 tons of contaminated soil was removed from the site and placed in the West Hawaii landfill by May 2016. This site received brownfield funding for the initial soil investigation, and HICDC utilized a substantial loan from

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

the Hawaii Brownfield Revolving Loan Fund to complete the soil removal action.

Above: Limits of Excavation in Deep Contaminated Area, April 2016

Above: Grass Stabilizing the Final Restored Site, June 2016

The excavated site was filled with clean soil and restored with a grass cover by June 2016. HICDC received a "No Further Action" letter from the HEER Office in September 2016 for closure, and the site will be suitable for future unrestricted use, including residential development.

Update of Vog-related health and protective measures information for the public, and posting of a new Interagency "Vog Dashboard" as public resource

The HEER Office worked with USGS and the International Volcanic Health Hazard Network (IVHHN) to review and update existing public information on volcanic emissions (vog) and protective measures that was available from state and local organizations. Three primary updated resource documents were created – a 12-page booklet, a 3-page flyer, and a poster – to convey the updated vog public health messages. A small professional design firm assisted to help make these documents attractive and

easy to read for the general public. These documents were posted on a new vog dashboard website (<http://ivhnhn.org/vog/vog-fact-sheets>) and hard copies were planned to be printed for distribution throughout key sites on Hawai'i Island for public access.

The HEER Office also participated with other partners including USGS, the International Volcanic Health Hazard Network (IVHHN), the National Park Service, US Department of Agriculture, Hawai'i Civil Defense, Hawai'i County, and the UH Hilo Center for Active Volcanoes in developing and posting a new comprehensive vog dashboard website (www.ivhnhn.org/vog) that brings together a wide variety of information on vog, including links to monitoring and weather sites, available fact sheets and other guidance material on protective measures, agricultural impacts/concerns, water catchment-related impacts, peer-reviewed scientific papers on health effects, etc.. This is intended as a "one-stop" site to locate the quality information about vog and links to a number of important vog-related resource websites.

Policy and Guidance Development

Because HRS 128D requires private parties to investigate and clean up contamination under State oversight, having clear, understandable guidance on rapid, protective and cost effective investigation and cleanup techniques is crucial. ERRF and SRP funded staff positions and expert consulting prepare state-of-the-art technical guidance for the investigation and cleanup of contaminated properties. The complete on-line Technical Guidance Manual is found at: <http://www.hawaiidoh.org>

HEER Office Technical Guidance Manual (TGM) Updates

Updates to the on-line HEER Office Technical Guidance Manual (TGM) which provides direction to environmental consultants and other interested parties on strategies and methods for assessment, remediation, and closure of chemical release sites continued in FY16. Major updates to Sections 3, 4, 5, and 8 of the TGM covering Decision Unit and Multi Increment sampling strategies and methods for soil and sediment as well as field screening methods for contaminants were posted on-line for stakeholder review and comment in January 2016, and revisions and additional guidance based on comments received were made in subsequent months. The final Section updates were scheduled for posting online in the fall of 2016. Plans were also made to work on updates to TGM Section 6 covering Groundwater

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

Monitoring, as well as a new TGM Section on Environmental Risk Assessment for Nearshore Marine Environments in FY2017.

Large Volume Purge (LVP) Sampling

As described in the section about the rail project, the HEER Office completed Large Purge Volume (LVP) sampling at a former dry-cleaning property with high concentrations of solvent constituents in vapors at prior to construction of a rail station. The field report for the LVP study provides detailed diagrams of the equipment and methods used to collect both passive vapor samples and LVP vapor samples at the study site and is available for download at:

<http://eha-web.doh.hawaii.gov/eha-cma/Downloads/HEER/LVPFieldStudyHDOHJuly2017.pdf>

Based on this work, a discussion of LVP sampling methods will be added to Section 7 of the HEER Office Technical Guidance Manual next fiscal year, and the HEER Office has been working to educate the local consulting community about LVP sampling. On June 28, 2017, Dr. Roger Brewer of the HDOH HEER Office gave a presentation on LVP methods for the collection of subslab vapor samples to the Hawaii Association of Environmental Professionals (HAEP). The slides and recorded presentation were subsequently modified to incorporate comments and questions received during the original presentation. Please find the presentation at:

<http://eha-web.doh.hawaii.gov/eha-cma/documents/5d62348b-15c0-4472-a0b4-7383f32fe03e> and the video recording at: <https://www.youtube.com/watch?v=x97kot6Favk&list=P LQD-miRPhTimEYSngRgzvRmqWtCiisvBk&index=5>

Development of Ecological Risk Assessment Guidance for Hawai'i Coastal Environments

In addition to a focus on human health, a primary goal of the HEER Office is to ensure that wildlife and the environment are protected from significant chemical hazards. Consequently, development of ecological risk assessment (ERA) guidance for chemical contamination in the near shore marine environment has been underway in recent years. In FY 2015, draft "screening level" ERA guidance was completed, and in FY 2016 associated draft "baseline" ERA guidance was completed. Plans are to present the Draft "Screening" and "Baseline" ERA guidance for thorough public review and comment in FY2017 before finalizing it, as well as host meetings or forums with target groups to discuss the new ERA guidance.

Webinar Training Series Now Available on YouTube

The HEER office webinar series was launched in 2015 to provide training to State, County and Federal Agencies along with the environmental consultant community to develop a shared understanding of the latest scientific, technical, and policy development affecting cleanups in Hawai'i. The HEER Office also routinely works with these stakeholders as we update the Technical Guidance Manual for the Implementation of the Hawai'i State Contingency Plan (TGM). This fiscal year, John Peard and Roger Brewer created several training modules to develop a shared stakeholder understanding of the latest scientific, technical, and policy development affecting cleanups in Hawai'i. The initial trainings were given in person, and the next series of trainings were presented as webinars, and then broadcast on HEER's YouTube channel. Each training provides clear, concise, "how-to" instruction on key components of Hawai'i's environmental investigation and cleanup process. On March 17, 2017, the HEER Office gave one live, face-to-face seminar to present updates to the TGM. Due to overwhelming popular demand, another seminar was held on April 19, 2017. Dr. Brewer also made dedicated visits to consultant's offices to reach even more stakeholders.

As a follow-up to the seminars provided to Hawaii environmental consultants, John Peard and Roger Brewer of the HEER office presented a four-part webinar series June 26-29, 2017, on the use of DU-MIS methods for the investigation of contaminated soil and sediment (TGM Sections 3, 4, 5, and 8). An estimated 200 to 300 consultants and regulators from more than 15 states plus Canada and China joined the webinars.

Copies of the Power Point presentations and recordings of the webinars are available at the links below:

- Part 1. Systematic Planning:
 - Presentation - <http://eha-web.doh.hawaii.gov/eha-cma/documents/39b5d148-23e7-40db-8918-a1c982188579>

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

- Part 3: Decision Unit Characterization (Sampling Theory, Discrete vs Multi Increment Samples)
 - Presentation - <http://eha-web.doh.hawaii.gov/eha-cma/documents/6ca33719-f5de-4ccc-b9ae-fa80e707d4d5>
 - Video - <https://youtu.be/1m3kpdoYvKE>
- Part 4: Field Implementation of DU-MIS Investigation Methods
 - Presentation, Part 1 - <http://eha-web.doh.hawaii.gov/eha-cma/documents/cc193e2d-fe15-4ecf-9bb0-4f2a2a7f71d0>
 - Presentation, Part 2 - <http://eha-web.doh.hawaii.gov/eha-cma/documents/2a3e546e-6f7d-4c0a-9f7d-692a7aa52239>
 - Video - <https://youtu.be/YehUFemlPrU>

These trainings were designed to increase the quality and compliance of environmental investigations submitted for regulatory review, allowing the HEER Office to provide streamlined oversight for trained consultants. By making them available online, we are able to reach a wider audience and gain much more regulatory consistency.

Providing Technical Assistance to other Government Agencies in Support of the EPA Brownfields Grants

Opportunities include individual and area-wide assessment grants of up to \$200,000 for hazardous substances and \$200,000 for petroleum contamination, grants to cities and counties for Brownfield assessments and cleanup loans through DBEDT's Brownfield Revolving Loan Fund (BFRLF) of up to \$1.6 million. HEER Office provided technical assistance to the Hawaii Island Development Authority, aiding in the successful award of a \$5732,000 loan from the BFRLF to cleanup a former pesticide mixing area located adjacent to their Kohala affordable housing project.

In FY2017, as a follow up to the \$400,000 Area wide Assessment Grant awarded to the Office of Hawaiian Affairs (OHA) in FY2013, HEER Office provided technical assistance to OHA to review Site Investigation Report prepared for all Kakaako Makai Parcels in preparation for future redevelopment. This study will allow OHA to address known contamination on the Kakaako parcel given to the agency as part of the 2013 state settlement on ceded lands.

In FY 2017, the HEER Office provided technical assistance to City and County of Honolulu, TOD in support of the

\$400,000 EPA Brownfields Assessment Grant received by City and County HEER Office assists in preparing inventory and selection of sites around the TOD corridor that will require proper cleanup before redevelopment continues. The HEER Office is providing technical support in the review of the Sampling and Analysis Plan following the State of Hawaii Technical Guidance Manual for selected sites along the TOD stations. Subsequently, HEER provided direct technical assistance to the selected contractor for development of the City and County Brownfields Inventory.

The HEER Office provided support and assistance to Honolulu Authority for Rapid Transit in their successful application for the EPA Brownfields Assessment and Cleanup Grant. HART is a 2017 recipient of \$600,000 EPA Brownfields Grant for cleanup grant and \$300,000 for EPA Brownfields Assessment grant. These grants will be used in the assessment and cleanup of properties along the rail guideways.

In support to Kohala Center mission of engaging Island of Hawaii to be energy self-reliance, and food self-reliance, the HEER Office prepared a Sampling and Analysis Plan to collect soil samples from the areas around the Former Niulii Sugar Mill to determine if the areas are suitable for food production. Sampling is scheduled in July of 2017.

Coordination with the state Department of Education (DOE) on screening school sites in east Hawai'i for soil contaminants

Based on documentation of soil arsenic contamination issues at several schools on the windward side of Hawai'i Island a number of years ago, the HEER Office has been periodically meeting with and advocating that DOE hire an environmental consultant to evaluate soils at a much larger number of schools that were located in areas of former sugarcane production. Those discussions finally resulted in a DOE contract being completed in July 2016 for screening soils at 23 east Hawai'i public schools located from the Laupāhoehoe area on the Hāmākua coast, south to the Ka'u District. Target contaminants to be investigated at select sites at each school include metals (including arsenic and lead), and termiticides (primarily chlordane). The potential sources of these chemicals could potentially result from historic use of arsenic in sugarcane production or weed control at the schools, lead in lead paint used before 1978, and chlordane or other termiticides used to protect wooden buildings through about 1988. Results of the planned screening and sampling efforts are expected to be available before the end of 2017.

Lead contamination from historic use of lead paint on steel structure bridges on Hawai'i Island

To date, significant lead contamination issues have been documented below three steel structure bridges located on the belt Highway north of Hilo town. These include the highway bridges at Umauma Stream, Hakalau Stream, and Kolekole Stream. The latter two sites have public beach parks located under the bridges, so have been a primary focus for soil assessment and hazard evaluation actions by the State Department of Transportation-Highways, with oversight by the HEER Office. In the case of the Hakalau Stream County beach park, areas of elevated lead near the bridge foundation girders were fenced off with warning signs to avoid any public exposures, while open areas in the small beach park itself were found to have much lower lead levels, and they still under evaluation/assessment. Area residents and park users were informed of the lead issues in soils and the on-going evaluations in the park via a fact sheet. Similar evaluations of lead in soils at Kolekole Beach Park were underway, and a Fact Sheet was utilized to inform the community and beach park users there as well.

Supporting Redevelopment and Construction using Environmental Hazard Management Plans

Given the economic recovery in Hawaii, development activities on brownfields sites continue to increase, with new cranes visible across Honolulu's skyline and active commercial and residential development across the island chain. In addition to receiving new sites into the state inventory, HEER works closely with property owners and developers to ensure construction activities that could disturb residual contamination on site are properly managed.

A useful tool has been the development of pre-construction environmental hazard management plans (EHMPs) for proactively identifying and handling contaminated media that may be encountered during construction. Development of approved construction EHMPs for development sites has allowed remediation to occur concurrently with construction by ensuring early identification and safe management of contaminated materials encountered. Pre-planning for properly handling on-site and proper disposal of contaminated materials as part of the remedial process is essential to prevent costly delays and overruns.

Intensive redevelopment in Kakaako and surrounding Ala Moana Shopping Center

Since the mid-1900s, land use in Kakaako has been classified as mixed light-industrial. Due to the importing of fill material and historic industrial uses such as service stations, auto-repair and dry cleaning, pockets of contamination in soil, groundwater and soil vapor may be present throughout the area. The most common impacts are from petroleum, heavy metals and solvents. With many properties being redeveloped, contamination caused by these historic operations is being uncovered and needs to be evaluated to protect future users of the property.

The HEER Office continues to work closely with responsible parties that include developers and property owners in the Kakaako area to properly investigate, remediate and manage the contamination at several redevelopment sites.

Community Involvement and Public Participation

Contaminated properties occur throughout our communities on all our islands. While many of these sites are in industrial areas where the likelihood of harmful exposures to the community or the natural environment is low, many sites with less visible contamination occur in areas where people live, work, and play. Identifying potential hazards in our communities and keeping the public informed about decisions and safe management of contaminated properties is a key priority for the HEER Office.

Interagency Program Support

ERRF funded remedial project managers work directly with State and County agencies to identify contaminated properties they own or control, and then to provide advice and oversight for needed investigations, risk management activities and redevelopment planning efforts.

FIVE KEY EHA ENVIRONMENTAL PROGRAMS

Expert Consulting

Using ERRF funding, the HEER Office makes strategic use of expert consultants under our Non-Emergency Services contract to assist with complex technical decision making on high priority sites, VRP sites, and properties with commingled contamination with multiple responsible parties. Consultant costs are cost recoverable for work under VRP, Fast Track, Voluntary Agreements, or Orders. On other projects, where investigations lead to identification of responsible parties, costs expended from the ERRF may also be cost recovered.

In FY2017, HEER used contract expertise to support technical decision making by remedial project managers on ecological risk assessment, soil gas and landfill closures and areawide EHMP development

128D RESPONSE PROGRAM SITE LISTS 2017

Blank Page

Sites Eligible for Possible Listing Under CERCLA

Three Hawaii sites are listed on the EPA National Priority List (NPL). Costs for site investigation and cleanup are being borne by the responsible parties. The state is not obligated to contribute to cleanup or future operation and maintenance costs. Through the EPA Preliminary Assessment/Site Inspection (PA/SI) Program, nine additional sites have been identified for possible listing under CERCLA.

<u>List of EPA NPL Sites - FY2017</u>			
	<u>Island</u>	<u>Locality</u>	<u>Facility/Site Name</u>
1	Oahu	Kunia	Del Monte Corp (Oahu Plantation)
2	Oahu	Navy, Naval Computer and Telecommunications Area Master Station-Pacific	NCTAMSPAC Center Street
3	Oahu	Navy, Pearl Harbor Naval Complex	Pearl Harbor Naval Complex

The following list of eight sites evaluated in Hawaii under the EPA PA/SI Program meet certain criteria for initial consideration for listing on the NPL. After careful review of site-specific data, and close coordination between the state and EPA, oversight for site cleanup of these properties has been transferred from the EPA to the HEER Office Hawaii State Response Program. These sites are no longer being considered for NPL listing.

<u>List of Sites Eligible for Possible Listing Under EPA CERCLA - FY2017</u>			
	<u>Island</u>	<u>Locality</u>	<u>Facility/Site Name</u>
1	Oahu	Waialua	Waialua Sugar Company Inc and Waialua Sugar Mill Settling Ponds
2	Kauai	Kekaha	Kekaha Sugar Mill
3	Oahu	Kailua	Kapaa Landfill - Kapaa Quarry Road
4	Oahu	Honolulu	Kapalama Incinerator and Kapalama Incinerator Off Site Contamination
5	Molokai	West Molokai	Kalamaula Landfill
6	Hawaii	Hilo	Hawaii Cane Products Plant - Waiakea Pond
7	Oahu	Kailua	Honolulu Skeet Club
8	Oahu	Honolulu	Pukoloa Wood Treating Site

The Hawaii State Response Program (HSRP) Chemical Release Notification Log

The Hawaii State Response Program Release Notification Log shows a listing of all chemical and petroleum release notifications received by the HEER Office emergency response team during the fiscal year. The Release Notification Log is sorted in order of Island, Locality, and the Case Name.

The FY2016 Release Notification Log lists 546 hazardous substance and petroleum release notifications managed by the HEER Office State On-Scene Coordinators (SOSCs). 369 cases were directly related to the release of petroleum related substances.

HEER Office SOSCs performed direct oversight on 234 cases requiring on-site visits or off-scene coordination. 52 cases were referred to other agencies.

HEER Office Emergency Response Actions - FY2017

The Hawaii Response Program (HSRP) – List of Priority Sites

Chapter 128D, HRS, Environmental Response Law, Section 7, HRS mandates that a State List of Sites be published annually listing the sites with potential or known hazardous substances or pollutants or contaminants. Overall, in FY2017, HEER had oversight responsibilities for 875 active sites, and reached No Further Action determinations at 37 sites.

We present the list in two sections.

The Hawaii State Response Program List of Priority Sites presents all non-military Hawaii sites identified for potential or known non-emergency response actions under HRS 128D. Current ERRF funding supports only part of the HEER Office response obligation for these sites. 572 active sites under direct DOH oversight in the various State programs are listed. 25 state sites with known or suspected contamination received No Further Action Determinations. Of those, 14 sites require ongoing management of residual contamination through Environmental Hazard Management Plans. Note that these sites are not included separately on the Priority Site list below.

The Hawaii State Response Program DSMOA Program List of Priority Sites presents military sites in Hawaii for which SDAR provides oversight. Hazardous substance response actions are managed by various DOD branches under CERCLA authorities, with regulatory oversight from SDAR. Cleanup sites within the Pearl Harbor Naval Complex are co-regulated by US EPA, due to the National Priorities List (“Superfund”) designation. The DOD sites include numerous high priority unexploded ordnance sites (UXO). Investigations and cleanups of military sites with petroleum-contaminated sites are conducted under 128D authorities, as petroleum is not covered under CERCLA. ERRF funds are not currently used for oversight of military cleanups in Hawaii. Staff positions providing oversight for this work are currently funded by federal DSMOA grants. The list includes 303 sites that are co-managed by DOH and DOD under CERCLA and HRS 128D authorities.

The HEER Office performs periodic quality assurance/quality control checks on the data for inconsistencies and discrepancies. The end result of these efforts has led to identifying an additional 71 sites that have been addressed by the HEER Office and hence removed from the active site list in addition to the 26 No Further Action sites that were removed from last year’s list, leading to the total number of active sites being reduced from 400 to 303. Further checks will be performed throughout the upcoming year to ensure the accuracy of the data being presented.

Because the Air Force and Navy work systematically to address high priority sites first, the majority of these sites remaining are medium and low priority. In 2017, clean up decisions were reached at 12 DSMOA sites, some of which will require ongoing management of residual contamination through Environmental Hazard Management Plans. The lists are sorted in the order of Island, Locality or Installation, and Site Name. The site Priority, Action, and Potential Hazard are identified for each Facility/Site. Sites are categorized as a potential hazard when sampling data indicate that contaminant concentrations exceed Hawaii Environmental Action Levels. Generally, these conservative action levels are set to be protective of long term, daily exposures. Hazards are managed by removal or destruction of the contaminants (No Hazard), use restrictions that limit access to the contamination, (Institutional Controls), or physical barriers that limit exposure to the contaminants (Engineering Controls).

Blank Page

HSRP LIST OF PRIORITY SITES FY2017

FY2017 Response Program Activity

Response Program Activity Summary data presented in this section for the Hawaii State Response Program (SRP) includes all Hawaii sites identified for non-emergency response actions during FY2017 and sites requiring evaluation if an assessment or response action is required under HEER Office authority. The HEER Office manages sites within five program areas depending upon eligibility, funding, and level of responsible party participation as:

State Sites

Hawaii Brownfields Revitalization Sites (Brownfields)

Hawaii Voluntary Response Program (VRP) Sites

Site Discovery (SDAR) and Preliminary Assessment/Site Inspection (PA/SI) Sites

DSMOA Department of Defense Sites

Over time, a site may be managed within the HEER Office under one or more program areas, starting with the site assessment phase and if required by the State, through to cleanup completion.
