# A BILL FOR AN ACT

RELATING TO ENERGY.

**BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF HAWAII:**

1       SECTION 1. In 2014, the public utilities commission issued  
2 a landmark white paper titled "Commission's Inclinations on the  
3 Future of Hawaii's Electric Utilities: Aligning the Utility  
4 Business Model with Customer Interests and Public Policy Goals".  
5 The white paper offered "perspectives on the vision, business  
6 strategies and regulatory policy changes required to align the  
7 HECO Companies' business model with customers' interests and the  
8 state's public policy goals".

9       The legislature finds that improving the alignment of  
10 utility customer and company interests is critical to ensuring  
11 that Hawaii's residents and businesses do not suffer economic  
12 and environmental harm from the State's energy systems. At the  
13 same time, this realignment is critical to ensure the ongoing  
14 viability of the State's regulated electric utilities, as the  
15 electric utilities face increasing need to rapidly adapt  
16 business models and strategies that enable new innovations and  
17 customer choices.

1        Furthermore, the legislature finds that this realignment  
2        has entered a period of extraordinary urgency. The commission's  
3        white paper noted that the State's utilities must rapidly create  
4        a twenty-first century generation system, modernize transmission  
5        and distribution grids, and implement new rate structures in  
6        concert with changes to the outdated regulatory compact. The  
7        legislature agrees with the public utilities commission that  
8        "electric utilities need to move with urgency to modernize the  
9        generation system on each island grid as delays are lost savings  
10       opportunities".

11       To that end, some of the State's utilities have recently  
12       proposed modernization plans. Those plans would ultimately  
13       result in a dramatic reduction in fossil fuel consumption, as  
14       those fuels are replaced by renewable energy resources.  
15       However, this shift would be accompanied by an equally dramatic  
16       shift in how utility revenues are expended. As fewer funds are  
17       spent to purchase fossil fuels, those funds will be redirected  
18       to capital projects. This is a benefit to residents and  
19       businesses, insofar as fixed-cost renewable energy projects can  
20       reduce the risk of consumers facing volatile fossil fuel costs.

1 Renewable energy resources have also entered a new paradigm  
2 where they can lower energy costs in comparison to fossil fuels.

3 However, the existing regulatory compact rewards utilities  
4 for increasing capital expenditures by basing allowed revenues  
5 on the value of the rate base, irrespective of utility  
6 performance. This same business and revenue model has been in  
7 place for over a century. The Wall Street Journal explained  
8 that "the more [utilities] spend, the more profits they earn",  
9 and called this "a regulatory system that turns corporate  
10 accounting on its head".

11 The legislature additionally finds that it is justified to  
12 be concerned that the existing regulatory compact misaligns the  
13 interests of customers and utilities because it may result in a  
14 bias toward expending utility capital on utility-owned or funded  
15 projects. These projects may displace more efficient or cost-  
16 effective options, such as distributed energy resources owned by  
17 customers or projects implemented by independent third parties.

18 The legislature concludes that it must ensure a change to  
19 the regulatory compact to promote decisions and strategies that  
20 will maximize public benefit, reduce ratepayer risk, and meet  
21 Hawaii's energy goals.

1       The legislature also finds that, although some utility  
2 performance incentives are being considered in existing dockets  
3 at the public utilities commission, any resulting performance  
4 incentives have not been transformative in urgently moving  
5 electric utilities toward the State's ambitious energy policy  
6 goals. The legislature further finds that the responsibility  
7 for aligning investor-owned utility regulatory policies with  
8 customers' interests and the State's public policy goals is not  
9 limited to the public utilities commission, but more broadly  
10 rests with the state and county governments that represent the  
11 public interest. The regulatory framework under which utilities  
12 operate and the scope of regulation by the public utilities  
13 commission are established by the legislature, which holds the  
14 exclusive authority to issue, amend, or revoke franchise rights  
15 that permit utilities to operate in the State.

16       The purpose of this Act is to protect consumers by urgently  
17 and proactively ensuring that the existing utility business and  
18 regulatory model will be updated for the twenty-first century by  
19 requiring that electric utility rates be considered just and  
20 reasonable only if the rates are derived from a performance-  
21 based model for determining utility revenues.

1 SECTION 2. This Act shall be known as the Hawaii Ratepayer  
2 Protection Act.

3 SECTION 3. Chapter 269, Hawaii Revised Statutes, is  
4 amended by adding a new section to part I to be appropriately  
5 designated and to read as follows:

6 "§269- Performance incentive and penalty mechanisms.

7 (a) On or before January 1, 2020, the public utilities  
8 commission shall establish performance incentive and penalty  
9 mechanisms that directly tie electric utility revenues to a  
10 utility's achievement on performance metrics and break the  
11 direct link between allowed revenues and investment levels.

12 Once established, such performance incentives and penalties, as  
13 may be amended by the public utilities commission from time to  
14 time, shall apply to all regulation of electric utility rates  
15 under section 269-16.

16 (b) In developing performance incentive and penalty  
17 mechanisms, the public utilities commission's review of electric  
18 utility performance shall consider but shall not be limited to  
19 the following:

20 (1) The economic incentives and cost-recovery mechanisms  
21 described in section 269-6(d);

1        (2) Volatility and affordability of electric rates and  
2        bills that customers are asked to pay;  
3        (3) Electric service reliability;  
4        (4) Customer engagement and satisfaction, including  
5        customer options for managing electricity costs;  
6        (5) Access to utility system information, including but  
7        not limited to public access to electric system  
8        planning data and aggregated customer energy usage  
9        data, and individual access to granular information  
10       about an individual's own energy usage data;  
11       (6) Rapid integration of renewable energy sources,  
12       including quality interconnection of customer-sited  
13       resources; and  
14       (7) Timely execution of competitive procurement, third-  
15       party interconnection, and other business processes.  
16       (c) This section shall not apply to a member-owned  
17 cooperative electric utility."

18       SECTION 4. New statutory material is underscored.

19       SECTION 5. This Act shall take effect on July 1, 2018.

**Report Title:**

Ratepayer Protection Act; Public Utilities Commission; Electric Utilities; Performance Incentive and Penalty Mechanisms

**Description:**

On or before January 1, 2020, requires the public utilities commission to establish performance incentive and penalty mechanisms that directly tie electric utility revenues to the utility's achievement on performance metrics. Exempts member-owned cooperative electric utilities. (SD1)
