P.O. BOX 119, HONOLULU, HAWAI'I 96810-0119 Ph: (808) 586-6000 | Fax: (808) 586-1922 ETS.HAWAII.GOV

September 15, 2020

The Honorable Ronald D. Kouchi,
President, and
Members of The Senate
Twenty-Ninth State Legislature
Hawaii State Capitol, Room 409
Honolulu, Hawaii 96813

The Honorable Scott K. Saiki, Speaker, and Members of The House of Representatives Twenty-Ninth State Legislature Hawaii State Capitol, Room 431 Honolulu, Hawaii 96813

Dear President Kouchi, Speaker Saiki, and Members of the Legislature:

Pursuant to HRS section 27-43.6, which requires the Chief Information Officer to submit applicable independent verification and validation (IV&V) reports to the Legislature within ten days of receiving the report, please find attached the report the Office of Enterprise Technology Services received for the State of Hawaii Department of Health Hawaii BHA Integrated Case Management System Project.

In accordance with HRS section 93-16, this report may be viewed electronically at http://ets.hawaii.gov (see "Reports").

Sincerely,

DOUGLAS MURDOCK Chief Information Officer

State of Hawai'i

Attachment (2)

Hawaii BHA Integrated Case Management System Project – *Phase 3*

Final IV&V Report for the period of

August 1 – August 31, 2020

Final submitted: September 8, 2020

Agenda

Executive Summary

IV&V Findings & Recommendations

Appendices

- A Rating Scales
- B Inputs
- C Project Trends

Executive Summary

The Project deployed a mid sprint release to production in August. Like last month's reporting, issues continue to persist with release deployments and the need to perform regression testing for all releases is still being advocated by IV&V.

The RSM Team continued to provide essential support during August alleviating some of the bandwidth concerns expressed by DOH to meet crucial project needs. IV&V continues to recommend that BHA seek additional state technical resources to help support on-going development work.

The Project continues to make good progress on the planning and execution of all three iterations for Release 3.10 as well as the Help Desk and Semantic Layer/Business Intelligence workstreams. IV&V notes there has been a higher than expected volume of M&O User Story Points for R3.10.

Jun	Jul	Aug	Category	IV&V Observations
G	Y	Y	Sprint Planning	There were no substantive changes for this category which remains Yellow (medium) for the August reporting period. The BHA Technical Team's bandwidth is still a concern and the need for BHA to continue to pursue additional skilled technical MS Dynamics resources to permanently fill their technical support needs and increased volume of work is still recommended. IV&V will continue to monitor this risk moving forward.
G User Story (US) Validation IV&V reports no active findings for User Story (US) Validation category which remarks Green (low) for the August reporting period. IV&V will continue to monitor the US development and validation process in upcoming reporting periods.				
G	G	Test Practice Validation IV&V has changed the criticality rating for this category to a Yellow (medium) for the August reporting period. The Project Team's decision to no longer perform regression testing for Mid-Sprint Deployments is not a best practice and is not recommended by IV&V. Production issues could potentially be avoided if adequate time is dedicated to performing regression testing. IV&V acknowledges that the Project Team is re-evaluat testing best practices.		

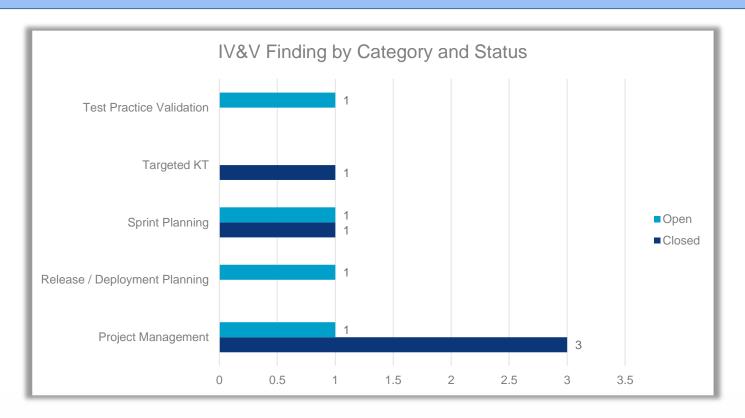

Executive Summary

Jun	Jul	Aug	Category	IV&V Observations	
Y	Y	Y	Release / Deployment Planning	The criticality rating for this category remains Yellow (medium) for the August reporting period. IV&V observed after the Mid-Sprint production deployment on 8/21/20 that a necessary updated software plug was not deployed. Non-production environment differences continue to be a concern. IV&V acknowledges that the Project Team is reevaluating deployment best practices.	
G	G	G	OJT and KT Sessions	The criticality rating for the OJT and KT Sessions category remains Green (low) for the August reporting period with no active findings.	
G	G	G	Targeted KT	IV&V closed the associated KT finding for this category as no additional KT gaps have been identified by DOH. The Targeted KT criticality rating will remain a Green (low) for the August reporting period.	
G	G	G	Project Performance Metrics	IV&V has discontinued the Project Performance Metrics reporting until the next agile release R3.11.	
G	G	G	Organizational Maturity Assessment	The criticality rating for the Organization Maturity Assessment (OMA) will remain Green (low) up through the completion of R3.10 when the next agile release will be implemented.	
Y	Y	Y	Project Management	The criticality rating for the Project Management category remains Yellow (medium) for the month of August. DDD has developed a Resource Plan to address the preliminary concern reported by IV&V last month to have resources available to assist with user adoption, training, and overall OCM activities. The COVID-19 risk remains Yellow (medium) for the August reporting period despite the issuance of an Oahu Stay-at-	

Executive Summary

As of the August 2020 reporting period, there are a total of four open findings – one Medium Issue and three Medium Risks spread across the Sprint Planning, Release / Deployment Planning, Test Practice Validation, Targeted Knowledge Transfer, and Project Management assessment areas.

Assessment Categories

Throughout this project, IV&V will verify and validate activities performed in the following process areas:

- Sprint Planning
- User Story Validation
- Test Practice Validation
- Release / Deployment Planning
- On-the-Job Training (OJT) and Knowledge Transfer (KT) Sessions
- Targeted Knowledge Transfer (KT)
- Project Performance Metrics
- Organizational Maturity Assessment
- Project Management

Sprint Planning

#	Key Findings	Criticality Rating
8	Medium Risk - The BHA Technical Team bandwidth may not be adequate to meet the needs of the project, which could compromise project productivity. There were no substantive changes to this finding during the month of August. IV&V will continue to monitor this risk moving forward.	M

Recommendations	Status
The Project should investigate mechanisms of increasing the bandwidth of the BHA Technical Team, either by adding resources through new hires, or vendor contracts.	In progress
The Project should assess, where possible, if there are responsibilities of the BHA Technical Team that can be reassigned to other project staff.	In progress
The Project should evaluate where process inefficiencies can be addressed and streamlined to possibly free up the BHA Technical Team's availability.	In progress
The Project should consider the formation of a first level M&O resource team to triage/address production defects in a timely manner, without disrupting new development work.	In progress

Test Practice Validation

#	Key Findings	Criticality Rating
2	Escalate from Low Issue to Medium Issue – As a result of regression testing not being consistently performed, production releases are breaking and/or deprecating existing functionality in the production environment. The Project Team decided not to perform regression testing for Mid Sprint Deployments based on the time required to perform the testing versus the perceived benefit. This continues to conflict with best practices and is not recommended by IV&V. The Test Team has previously reported that full regression testing requires approximately a day to execute. However, the Project Team may spend more time resolving production issues attributed to a Mid Sprint Deployment than it would take to perform regression testing. The Project discovered a high exposure defect that resulted in not all claim lines being generated by the system for a significant number of historical invoices. Initial investigation indicates that approximately 15% of claim lines are affected. The Project has determined there were three causes attributing to this defect, two of which have already been resolved and the last will be pushed to production M&O as soon as possible. The Project is considering expanding testing practices in non-production environments to include revenue neutrality testing. The development of automated regression testing is planned to occur during Release 3.10 and then utilized for Release 3.11 forward. However, with the State hiring freeze, it is becoming highly unlikely that staffing for this effort will be available to support the planned timeframe. IV&V is raising the criticality of this finding to Medium and will continue to monitor progress.	M
Recor	nmendations	Status
• Upo	dating the regression test scripts to ensure consistency with system configuration.	Completed
• Mod	difying release schedules to allow for regression testing timeframes.	In Progress
	nning releases by functionality type to avoid unnecessary repetitive work being performed in any given tion of the solution.	Completed

Test Practice Validation (cont'd)

Recommendations	Status
 Performing regression testing after every release, or possibly every other release, or potentially tying regression tests to full solution upgrade releases. In addition, consider alternating the DDD and CAMHD scripts every other release. 	Completed
Modifying regression test scripts to start AFTER case creation, limiting the time it takes to execute.	Completed
Modify the deployment scripts based on information gained from previous release deployments.	Completed
 Pursuing additional formal training in AzureDevOps for test automation at the earliest possible juncture and commence efforts to automate at least the 2 primary regression test scripts. 	Open
Consulting with RSM to determine how the 'interim testing processes' can be improved until such time that automated testing is available for repeatable and complete industry standard regression testing.	Completed
Implementing 'hard' code freeze dates as well as test environment deployment dates to ensure that testing and deployment activities are not rushed.	In Progress

Release / Deployment Planning

i	#	Key Findings	Criticality Rating
!	5	Medium Risk - Due to the project not following a detailed deployment script, the project may continue to experience defects related to deployment activities. With the assistance of RSM, the Team completed an M&O Mid Sprint production deployment on 8/21/2020. It was discovered afterwards that an updated software plug was mistakenly not deployed in the production environment. The updated plug had been deployed in DEV but was not deployed in DEV2. Environment differences continue to be a concern. To address this, the Project has just completed a Microsoft Solutions upgrade to the DEV and Test environments.	M

Recommendations	Status
 IVV recommends documenting deployment scripts for both the patch method and the full solution upgrade method. The script(s) should be in the form of a step-by-step procedure that walks through from start to finish of the deployment process and involve several technical staff to ensure staff availability to accomplish these tasks when primary deployment personnel are unavailable. 	Completed
• Standardize the content of all developer deployment task notes, with a goal of eliminating any potential ambiguity to the Deployment Team, resulting in a cleaner and more repeatable set of deployment processes and instructions.	Completed

Release / Deployment Planning (cont'd)

Recommendations	Status
As appropriate, consult with RSM on best practices that BHA could employ to support deployment.	In Progress
Look at implementing 'hard' code freeze dates as well as test environment deployment dates to ensure that testing and deployment activities are not rushed.	In Progress
 Request the assistance of the RSM Solution Architect in reviewing and correcting issues associated with consistency of the configurations across environments, ensuring that the test environment is capable of testing ALL functions of any given release without the need for using multiple test environments. 	In Progress
 Request the assistance of the RSM Solution Architect in review of deployment scripts as a double check for accuracy and completeness prior to commencing deployment activities. 	In Progress
Ensure an operational and fully functional test environment is available to effectively conduct end-to-end regression testing prior to deploying a release to production.	In Progress
The Project Team should consider evaluating potential changes to improve/enhance existing processes and communications to address current release/deployment shortfalls.	Open
 IV&V recommends performing a Root Cause Analysis in collaboration with RSM for the continued concerns surrounding environment differences. 	New

Targeted KT

#	Key Findings	Criticality Rating
3	Closed Low Risk – Usage of open source JavaScript framework for development and ongoing maintenance of Calculator 3.0 requires BHA to take a proactive approach to support and security. IV&V is unaware of any additional KT gaps being identified by DOH, and as such, is closing this finding.	Closed

Recommendations	
 IV&V recommends BHA work to establish a reliable and repeatable process for keeping abreast of communal updates and support opportunities for a new suite of tools. 	Completed
• IV&V recommends BHA continue to hold targeted KT sessions with RSM on maintaining Calculator 3.0 via a suite of tools, and determine what additional skillsets, training, and/or resources are needed to support BHA's long-term ownership of Calculator 3.0.	Completed

Project Management

#	Key Findings	Criticality Rating
10	Medium Risk -The COVID-19 pandemic and the related "stay at home" order could hinder project activities and negatively impact the project schedule and budget. On 8/25/2020, the new Stay At Home / Work From Home order for Oahu was issued due to the ongoing Coronavirus Pandemic challenges. The initial order is for 2 weeks, starting on 8/27/2020. IV&V notes that the project continues to move forward with staff working remotely. IV&V notes there may be potential budget actions by the Governor which may affect the project.	M

Recommendations	Status
 IV&V recommends BHA to ramp up efforts to setup, train, and assist stakeholders on remote work devices and tools and make every effort to help them to become highly functional with remote access technology (e.g. MS Teams/Skype). 	Completed
 IV&V recommends the project and DOH create a detailed, documented risk mitigation strategy and plan that is reviewed regularly and revised to address the current state of the COVID-19 threat and related impacts over the next 6 to 12 months. 	In Progress
 IV&V recommends updates to the OCM Plan to include any new activities or updates to planned activities to aid the organization through this COVID-19 situation in the short and long term. 	Open

Project Management (cont'd)

#	Key Findings	Criticality Rating
12	Preliminary Concern – DDD Project staffing shortages may have a continued negative effect on user adoption, training, and overall OCM activities. DDD has drafted a plan to identify their priority resource needs and options for filling those needs. The plan includes resource for a variety of disciplines beyond OCM such as Training, Report Writing, Help Desk and deployment work to support the current application as well as staffing needs for future system application functionality.	N/A

Recommendations	Status
 IV&V recommends that DOH pursue the addition of an OCM resource(s) to re-enforce and manage the effect of new business processes on staff members and who would facilitate with user adoption and training on the system to ensure it is being utilized as intended. 	In Progress
Develop a plan to identify, prioritize, and track DDD resource needs which need to be filled.	In Progress

Project Management (cont'd)

#	Key Findings	Criticality Rating
13	New Preliminary Concern – PII/PHI data in non-production environments. IV&V has been made aware that PII/PHI data currently exist in a non-production environment to meet project needs. Generally this is not a good security practice as the presence of PII/PHI data in non-production environments increases the potential for theft, loss or exposure thus increasing the organization's risk. Failure to secure PII/PHI data leaves the organization open to highly targeted social engineering attacks, heavy regulatory fines, and loss of client trust and loyalty.	N/A

Recommendations	Status
• IV&V recommends if production data is necessary in any non-production environment that DOH establishes a plan for effectively managing the security of the PII/PHI data, including the potential masking of data.	New
 IV&V recommends if production data is necessary in non-production environments that the Project consider employing Audit Logging for security purposes. 	New

Project Management (cont'd)

#	Key Findings	Criticality Rating
14	New Preliminary Concern – Project unable to access activity logs. The Project recently deployed audit log functionality into production whereby these logs can be accessed and exported as needed. However, IV&V was made aware access to activity logging for users with just view permissions will not be available from Microsoft in the public sector environment until the end of September 2020. The unavailability of these specific activity logs could potentially hamper the investigation of future security events until implemented.	N/A

Recommendations	Status
IV&V recommends that DHS continues to collaborate with Microsoft until the activity logging feature is available in the public sector environment.	New

Project Performance Metrics

Metric	Description	IV&V Observations	IV&V Updates
Velocity	 Review and validate the velocity data as reported by the project Verify the project is on pace to hit the total target number of US/USP for Phase 3 	N/A	IV&V has suspended the Velocity Metrics reporting for the R3.10 & R3.11 scrum-waterfall releases. This metrics reporting will commence at the next agile release.

Project Performance Metrics (cont'd.)

Metric	Description	IV&V Observations	IV&V Updates
US Point Estimates vs Actuals	 Verify the project is tracking US Point estimates and actual data Determine the delta between estimates and actuals Based on the delta (if any) investigate the potential root cause for the delta 	N/A	IV&V has suspended the US Point Estimates vs Actuals Metrics reporting for the R3.10 & R3.11 scrum-waterfall releases. This metrics reporting will commence at the next agile release.

Project Performance Metrics (cont'd.)

Metric	Description	IV&V Observations	IV&V Updates
Defect Metrics	 Understand and track the following: Defects by category (bug fixes) US Points assigned to defects in a release vs US Points assigned to planned US in a release 	N/A	IV&V has suspended the Defects Metrics reporting for the R3.10 & R3.11 scrum-waterfall releases. This metrics reporting will commence at the next agile release.

Organizational Maturity Assessment

Measure IV&V Observations

The Organizational Maturity Assessment (OMA) is updated on a bi-monthly basis. The next OMA will be planned for the next agile release which is after the R3.10 & R3.11 scrum-waterfall releases.

Appendix A: IV&V Rating Scales

Appendix AIV&V Rating Scales

This appendix provides the details of each finding and recommendation identified by IV&V. Project stakeholders are encouraged to review the findings and recommendations log details as needed.

- See Findings and Recommendations Log (provided under separate cover)
- IV&V Assessment Category Rating Definitions

The assessment category is under control and the current scope can be delivered within the current schedule.

The assessment category's risks and issues have been identified, and mitigation activities are effective. The overall impact of risk and issues is minimal.

The assessment category is proceeding according to plan (< 30 days late).

The assessment category is under control but also actively addressing resource, schedule or scope challenges that have arisen. There is a clear plan to get back on track.

The assessment category's risk and/or issues have been identified, and further mitigation is required to facilitate forward progress. The known impact of potential risks and known issues are likely to jeopardize the assessment category. Schedule issues are emerging (> 30 days but < 60 days late).

Project Leadership attention is required to ensure the assessment category is under control.

The assessment category is not under control as there are serious problems with resources, schedule, or scope. A plan to get back on track is needed.

The assessment category's risks and issues pose significant challenges and require immediate mitigation and/or escalation. The project's ability to complete critical tasks and/or meet the project's objectives is compromised and is preventing the project from progressing forward.

Significant schedule issues exist (> 60 days late). Milestone and task completion dates will need to be re-planned. Executive management and/or project sponsorship attention is required to bring the assessment category under control.

Appendix A

Criticality Ratings

Criticality Rating	Definition
•	A high rating is assigned if there is a possibility of substantial impact to product quality, scope, cost, or schedule. A major disruption is likely, and the consequences would be unacceptable. A different approach is required. Mitigation strategies should be evaluated and acted upon immediately.
M	A medium rating is assigned if there is a possibility of moderate impact to product quality, scope, cost, or schedule. Some disruption is likely, and a different approach may be required. Mitigation strategies should be implemented as soon as feasible.
L	A low rating is assigned if there is a possibility of slight impact to product quality, scope, cost, or schedule. Minimal disruption is likely, and some oversight is most likely needed to ensure that the risk remains low. Mitigation strategies should be considered for implementation when possible.

Appendix B: Inputs

Appendix B

Inputs

This appendix identifies the artifacts and activities that serve as the basis for the IV&V observations.

Meetings attended during the August 2020 reporting period:

- Daily Scrum Meetings (selected)
- 2. Twice Weekly RSM Issues Meeting
- 3. Weekly BHA-ITS Project Status Meeting
- 4. Bi-Weekly Check-in: CAMHD
- Bi-Weekly Check-in: DDD
- BHA IAPDU Planning Meeting
- 7. IV&V Draft IV&V Status Review Meeting with DOH
- IV&V Draft IV&V Status Review Meeting with RSM and DOH
- 9. Semantics Layer Meeting
- 10. INSPIRE Release 3.10 Iteration 2 Demo

Eclipse IV&V® Base Standards and Checklists

Artifacts reviewed during the August 2020 reporting period:

- Daily Scrum Notes (selected)
- 2. Twice Weekly Issues Meeting Notes (selected)
- 3. Mid-Sprint Deployment Planning Release Notes
