

OFFICE OF ENTERPRISE TECHNOLOGY SERVICES

P.O. BOX 119, HONOLULU, HAWAI'I 96810-0119 Ph: (808) 586-6000 | Fax: (808) 586-1922 ETS.HAWAII.GOV

August 11, 2021

The Honorable Ronald D. Kouchi, President, and Members of The Senate Thirty-First State Legislature Hawaii State Capitol, Room 409 Honolulu, Hawaii 96813 The Honorable Scott K. Saiki,
Speaker, and
Members of The House of Representatives
Thirty-First State Legislature
Hawaii State Capitol, Room 431
Honolulu, Hawaii 96813

Dear President Kouchi, Speaker Saiki, and Members of the Legislature:

Pursuant to HRS section 27-43.6, which requires the Chief Information Officer to submit applicable independent verification and validation (IV&V) reports to the Legislature within ten days of receiving the report, please find attached the report the Office of Enterprise Technology Services received for the State of Hawaii Department of Health Hawaii BHA Integrated Case Management System Project.

In accordance with HRS section 93-16, this report may be viewed electronically at http://ets.hawaii.gov (see "Reports").

Sincerely,

DOUGLAS MURDOCK Chief Information Officer State of Hawai'i

Attachment (2)

Hawaii BHA Integrated Case Management System Project – *Phase 3*

Final IV&V Report for the period of

June 1 – June 30, 2021

Final submitted: July 9, 2021

Agenda

Executive Summary

IV&V Findings & Recommendations

Appendices

- A Rating Scales
- B Inputs
- C Project Trends

Executive Summary

Resource constraints continued to put the Project at risk during this reporting period. Concerns that continue to result from the Project's DOH staffing resource constraints include:

- Corrective actions for the top five R3.12 and R3.15 Root Cause Analyses (RCA) were partially implemented as planned. The Project plans to review the RCAs in further detail in July.
- The Release 3.15 priority defects identified for a potential June Mid-Sprint Deployment (MSD) were pushed into the regular planned Release 3.16 in July.
- Impactful system defects that are the outcome of multiple quality concerns.

All of the IV&V risks have materialized into issues. IV&V will continue to monitor the high critical findings for sprint planning, release deployment, test practice validation, regression testing, and overall quality. We encourage the Project to continue implementing recommendations to mitigate risk and avoid the reoccurrence of issues in upcoming releases.

Apr	May	Jun	Category	IV&V Observations
Sprint needs is not adequate, which compromises project productivity and quality		The bandwidth of skilled BHA MS Dynamics resources to support the Project's technical needs is not adequate, which compromises project productivity and quality. The DOH team continues to be constrained by the staff shortages. The rating for this category remains Red (high) for the June reporting period.		
G	(low criticality) for the June reporting period. IV&V will continue to monitor the US			
R	R3.16 release in July. BHA has attended a number of regression testing tool (EasyF validation sessions conducted by Microsoft to evaluate the effort required to support and main		The Project Team is repeating regression testing including June MSD components for the R3.16 release in July. BHA has attended a number of regression testing tool (EasyRepro) sessions conducted by Microsoft to evaluate the effort required to support and maintain the tool. The rating for this category remains Red (high) for the June reporting period.	

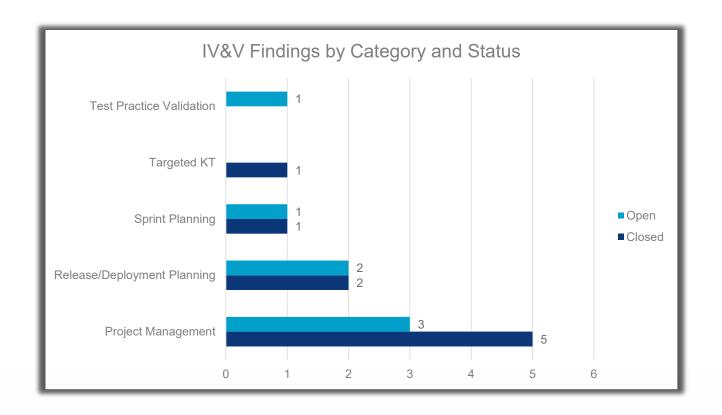

Executive Summary

Apr	May	Jun	Category	IV&V Observations	
R	R	R	Release / Deployment Planning	The majority of the R3.15 post-production issues in May were attributed to deployment processes and technical execution. RCA corrective actions to help improve release/deployments were partially implemented in June. The criticality rating for this category remains Red (high) for the June reporting period.	
G	G	G	OJT and KT Sessions	The criticality rating for the OJT and KT Sessions category remains Green (low) for the May reporting period with no active findings.	
G	G	G	Targeted KT	There are no active findings in this category which remains Green (low criticality) for the May reporting period. IV&V will continue to monitor this category moving forward.	
G	G	G	Project Performance Metrics	The Project plans on implementing 120 User Story Points for R3.16 which is planned for release in early July. IV&V will keep the criticality rating for this category a Green (low) and will continue to monitor this category moving forward.	
G	G	G	Organizational Maturity Assessment	The next OMA will be planned for late August or early September 2021. The criticality rating for the Organization Maturity Assessment (OMA) category remains Green (low).	
Y	R	R	Project Management	Quality issues continue to be a concern for IV&V in June. A planned portion of RCA action plans were implemented in June. Staff resource constraints continue to have an impact on fully executing essential R3.12 and R3.15 RCA action plans which are viewed as a cause for on-going quality issues. The criticality rating for this category remains Red (high) for the June reporting period.	

Executive Summary

As of the June 2021 reporting period, there are a total of seven open findings – four High Issues, two Medium Issues, and one Low Issue spread across the Sprint Planning, Release / Deployment Planning, Test Practice Validation, and Project Management assessment areas.

Assessment Categories

Throughout this project, IV&V will verify and validate activities performed in the following process areas:

- Sprint Planning
- User Story Validation
- Test Practice Validation
- Release / Deployment Planning
- On-the-Job Training (OJT) and Knowledge Transfer (KT) Sessions
- Targeted Knowledge Transfer (KT)
- Project Performance Metrics
- Organizational Maturity Assessment
- Project Management

IV&V Findings & Recommendations Sprint Planning

#	Key Findings	Criticality Rating
8	High Issue - The BHA Technical Team bandwidth may not be adequate to meet the needs of the project, which could compromise project productivity. There were no substantive changes observed in June as hiring within the State continues to be a challenge. The bandwidth of BHA senior technical staff trained in the Dynamics environment continues to be inadequate in meeting the demands of the Project. This finding will remain as a high priority issue until resolved by BHA.	(1)
Recor	nmendations	Status
	Project should investigate mechanisms of increasing the bandwidth of the BHA Technical Team, either by ing resources through new hires, or vendor contracts.	In progress
	Project should assess, where possible, if there are responsibilities of the BHA Technical Team that can reassigned to other project staff.	In progress
	Project should evaluate where process inefficiencies can be addressed and streamlined to possibly free the BHA Technical Team's availability.	In progress
	Project should consider the formation of a first level M&O resource team to triage/address production ects in a timely manner, without disrupting new development work.	In progress
	Project should consider procurement of an online training toolset to support OCM and technical efforts to et the need for in-person training.	Completed

Test Practice Validation

#	Key Findings	Criticality Rating
	High Issue – As a result of regression testing not being consistently performed, production releases are breaking and/or deprecating existing functionality in the production environment. Manual regression testing for DDD and CAMHD was completed for the planned Mid Sprint Deployment	
2	(MSD) of defects resulting from R3.15 in early June. The project team subsequently decided to forgo the MSD and instead implement the associated MSD changes into the R3.16 production release. This action will require regression testing to be performed again for the MSD changes in R3.16.	0
	BHA attended several regression testing tool (EasyRepro) sessions conducted by Microsoft during the month of June. BHA is concerned with the amount of overhead required to setup and maintain the tool with current staffing limitations. BHA will continue to evaluate/analyze the tool to determine the associated efforts required to support and maintain the tool.	

Recommendations	Status
 IV&V recommends DDD and CAMHD to develop a common and consistent approach across divisions for performing regression testing. 	In Progress
 Pursuing additional formal training in AzureDevOps for test automation at the earliest possible juncture and commence efforts to automate at least the 2 primary regression test scripts. 	In Progress

Test Practice Validation (cont'd)

Recommendations	Status
IV&V recommends performing an RCA in collaboration with RSM for the continued concerns with regression testing efforts.	In Progress
Determine if current regression testing timeframes are adequate and if not, add more time to the pre- production regression test efforts for all release deployments.	In Progress
Updating the regression test scripts to ensure consistency with system configuration.	Completed
Modifying release schedules to allow for regression testing timeframes.	Completed
 Planning releases by functionality type to avoid unnecessary repetitive work being performed in any given section of the solution. 	Completed
 Performing regression testing after every release, or possibly every other release, or potentially tying regression tests to full solution upgrade releases. In addition, consider alternating the DDD and CAMHD scripts every other release. 	Completed
 Modifying regression test scripts to start AFTER case creation, limiting the time it takes to execute. (This recommendation was for a point in time and is no longer valid.) 	Completed
Implementing 'hard' code freeze dates as well as test environment deployment dates to ensure that testing and deployment activities are not rushed.	Completed

Test Practice Validation (cont'd)

Recommendations	Status
Modifying the deployment scripts based on information gained from previous release deployments.	Completed
Consulting with RSM to determine how the 'interim testing processes' can be improved until such time that automated testing is available for repeatable and complete industry standard regression testing.	Completed

Release / Deployment Planning

#	Key Findings	Criticality Rating
19	High Issue - Due to ongoing deployment processes and technical execution issues, the Project may continue to encounter defects and challenges in meeting projected timelines for production and non-production deployments. The majority of the R3.15 post-production issues in May were attributed to deployment processes and technical execution. The planned MSD to remedy the high priority R3.15 defects in June was not deployed to production but instead will be deployed in the R3.16 release.	B
	Due to resource constraints, a planned portion of the deployment-related corrective actions from the R3.12 and R3.15 RCA's have been implemented . IV&V looks to see the team implement further recommendations in the next releases.	

Recommendations		
 Develop a plan to institutionalize the execution of "Smoke Testing" for promotions to non-production and production environments. This will help to ensure that all components needed to test have been properly deployed prior to the actual execution of test activities. 	In Progress	
 Work in collaboration with RSM to establish a transition plan for DOH to assume all deployment activities to ensure complete ownership of these processes. This should assist with consistency in approach and execution going forward. 	In Progress	
As appropriate, consult with RSM on best practices that BHA could employ to support deployment.	In Progress	

Release / Deployment Planning (cont'd)

Recommendations	Status
 Request the assistance of the RSM Solution Architect in reviewing and correcting issues associated with consistency of the configurations across environments, ensuring that the test environment is capable of testing ALL functions of any given release without the need for using multiple test environments. 	In Progress
Request the assistance of the RSM Solution Architect in review of deployment scripts as a double check for accuracy and completeness prior to commencing deployment activities.	In Progress
The Project Team should consider evaluating potential changes to improve/enhance existing processes and communications to address current release/deployment shortfalls.	In Progress
 IV&V recommends performing an RCA in collaboration with RSM for the continued concerns surrounding environment differences. 	In Progress
• IV&V recommends updating the Project's Configuration Management Plan to address the current needs of the Project. This should include specific checklists geared at ensuring repeatable promotional processes by DOH.	In Progress
 Due to an error prone process of 'cherry picking' what is and what is not ready for deployment, IV&V recommends that DOH and RSM collaborate to determine an improved manner for managing DOH environments. (As a result of how the current development environment is being managed, 'cherry picking' components to deploy will continue to occur. This recommendation is closed.) 	Closed

Release / Deployment Planning (cont'd)

Recommendations	Status
Look at implementing 'hard' code freeze dates as well as test environment deployment dates to ensure that testing and deployment activities are not rushed.	Completed
Ensure an operational and fully functional test environment is available to effectively conduct end-to-end regression testing prior to deploying a release to production.	Completed

Release / Deployment Planning (cont'd)

#	Key Findings	Criticality Rating
18	Change from Medium Issue to Low Issue - Due to consistent technical issues requiring escalation to Microsoft (MS), some project efforts are being delayed. The number of issues requiring assistance from Microsoft continues to be low with only two known items open. As such, IV&V is reducing the priority of this finding to low and will continue to monitor.	•

Recommendations	Status
 IV&V recommends the project to continue to monitor the status of outstanding Microsoft tickets and to escalate the priority of these tickets as deemed necessary. 	In Progress

#	Key Findings	
15	High Issue - Due to multiple quality concerns, the Project may continue to face impactful system defects. A Mid Sprint Deployment (MSD) was identified for June to remedy defects caused by R3.15. This was deferred to the July R3.16 regular release after planned regression testing was executed. Quality issues continue to remain a concern for IV&V. Due to resource constraints, the Project has adopted a measured pace to implement corrective actions from the R3.12 and R3.15 RCAs. The Project plans to review these RCAs and associated action items in further detail in July. IV&V will continue to monitor this high issue in July.	H
Recon	nmendations	Status
Dedicate sufficient time in between releases for BHA and RSM to execute/implement RCA correction actions to reduce the volume of unplanned rework.		In Progress
Evaluate existing project staff skills and experience level to ensure they meet BHA support requirements.		
• Peri	form revenue neutrality fiscal balance testing on a quarterly basis to ensure revenues are as expected.	In Progress
	form typical project testing including System Integration, User Acceptance, Performance, and Regression ting.	In Progress
• Ass	ign dedicated resources to provide oversight of CAMHD Fiscal Processes.	In Progress

Recommendations	Status
Monitor implemented improvements for effectiveness.	In Progress
 IV&V recommends performing an RCA in collaboration with RSM after all future release deployments for continual quality improvement. 	In Progress
BHA and RSM to collaborate on the necessary revisions to the submitted design deliverables to increase level of detail and quality.	Completed

#	Key Findings	
Medium Issue – PII/PHI data in non-production environments. BHA has coordinated with the DHS/MedQuest Division to evaluate the use of their Delphix data masking tool to address the PII/PHI data in non-production environments. Additional meetings and collaboration are planned in July. IV&V will continue to monitor this finding.		M

Recommendations	Status
 IV&V recommends DOH consider limiting the volume of environments with PII/PHI data and access necessary to support development work, which should help minimize this risk. 	Open
• IV&V recommends if production data is necessary in any non-production environment that DOH establishes a plan for effectively managing the security of the PII/PHI data, including the potential masking of data.	In Progress
 IV&V recommends that DOH mitigates this finding by minimizing and/or masking PHI/PII data in designated non-production environments. 	In Progress

#	Key Findings	Criticality Rating
17	Closed Low Risk - The bandwidth of CAMHD Leadership is being hampered by planning tasks and activities for assessing project expansion to other divisions. As anticipated, the CAMHD Leadership time dedicated to the Project has returned to normal and expected levels. As such, IV&V is closing this finding.	Closed

Recommendations	Status
 IV&V recommends CAMHD look for opportunities to augment the management staffing for planning Phase 4 and M&O work. 	Closed

#	Key Findings	Criticality Rating
21	Change from Preliminary Concern to Medium Issue – The DDD Project Manager will be on leave and unavailable to the project starting in May. The absence of the DDD Project Manager continues to cause bandwidth/workload challenges for DDD technical staff. Time available for typical DDD CRM assignments was limited in June due to this resource constraint. IV&V has promoted this finding from a Preliminary Concern to a Medium criticality issue and will continue to monitor.	M

Recommendations	Status
 IV&V recommends DDD to continue to look for opportunities to augment the existing technical staff in order to fully support current DDI project work. 	New
 IV&V recommends DDD to consider augmenting their current PM/Business staff in order to allow their technical staff to focus on technical duties. 	New

#	Key Findings	Criticality Rating
22	New Preliminary Concern – Unplanned rework may have an impact on delivering DDI Functionality by the end of the DDI period. The continued volume of unplanned rework may have an impact on delivering planned DDI functionality with only 4 possible DDI releases remaining for completion.	N/A

Project Performance Metrics

Metric	Description	IV&V Observations	IV&V Updates
Velocity	 Review and validate the velocity data as reported by the project Verify the project is on pace to hit the total target number of US/USP for Phase 3 	June – No regular promotions to production were planned in June. Available velocity was estimated at 114 user story points for R3.16, and a total of 120 USPs are planned for production release in early July. IV&V notes that this release will include originally planned user stories, planned user stories specific to the HSRI interface, and the resolved defects from R3.15 deferred to the R3.16 scheduled release. IV&V notes that RSM includes USP counts from Mid Sprint Deployments prior to a planned release as component of the planned release. IV&V notes that the issues identified for a Mid Sprint Release in June were deferred to the scheduled R3.16 release. Overall, the cumulative Phase 3 targeted USP's	N/A
		through R3.15 was planned for 1,332. The cumulative USP total (including R3.16 planned in early July) is 1,688.3. This exceeds expectations for volume of work product on the schedule.	

Project Performance Metrics (cont'd.)

Metric	Description	IV&V Observations	IV&V Updates
Defect Metrics	 Understand and track the following: Defects by category (bug fixes) US Points assigned to defects in a release vs US Points assigned to planned US in a release 	 June – R3.16 is planned for release in early July and 120 USPs are planned for production promotion. 62% of the total USPs are associated with planned user stories and requests. 38% of the total USPs are associated with defects either encountered during the release or pulled from the backlog. 	N/A

Organizational Maturity Assessment

Measure IV&V Observations

The Organizational Maturity Assessment (OMA) is updated on a bi-monthly basis. The next OMA will be planned for late August or early September 2021.

Appendix A: IV&V Rating Scales

Appendix AIV&V Rating Scales

This appendix provides the details of each finding and recommendation identified by IV&V. Project stakeholders are encouraged to review the findings and recommendations log details as needed.

- See Findings and Recommendations Log (provided under separate cover)
- IV&V Assessment Category Rating Definitions

The assessment category is under control and the current scope can be delivered within the current schedule.

The assessment category's risks and issues have been identified, and mitigation activities are effective. The overall impact of risk and issues is minimal.

The assessment category is proceeding according to plan (< 30 days late).

The assessment category is under control but also actively addressing resource, schedule or scope challenges that have arisen. There is a clear plan to get back on track.

Schedule issues are emerging (> 30 days but < 60 days late).

Project Leadership attention is required to ensure the assessment category is under control.

The assessment category is not under control as there are serious problems with resources, schedule, or scope. A plan to get back on track is needed.

The assessment category's risks and issues pose significant challenges and require immediate mitigation and/or escalation. The project's ability to complete critical tasks and/or meet the project's objectives is compromised and is preventing the project from progressing forward.

Significant schedule issues exist (> 60 days late). Milestone and task completion dates will need to be re-planned.

Executive management and/or project sponsorship attention is required to bring the assessment category under control.

Appendix A

Finding Criticality Ratings

Criticality Rating	Definition
B	A high rating is assigned if there is a possibility of substantial impact to product quality, scope, cost, or schedule. A major disruption is likely, and the consequences would be unacceptable. A different approach is required. Mitigation strategies should be evaluated and acted upon immediately.
M	A medium rating is assigned if there is a possibility of moderate impact to product quality, scope, cost, or schedule. Some disruption is likely, and a different approach may be required. Mitigation strategies should be implemented as soon as feasible.
L	A low rating is assigned if there is a possibility of slight impact to product quality, scope, cost, or schedule. Minimal disruption is likely, and some oversight is most likely needed to ensure that the risk remains low. Mitigation strategies should be considered for implementation when possible.

Appendix B

Inputs

This appendix identifies the artifacts and activities that serve as the basis for the IV&V observations.

Meetings attended during the June 2021 reporting period:

- Daily Scrum Meetings (selected)
- 2. Twice Weekly RSM Issues Meeting
- 3. Weekly BHA-ITS Project Status Meeting
- 4. Bi-Weekly Check-in: CAMHD
- Bi-Weekly Check-in: DDD
- 6. BHA IAPDU Planning Meeting
- IV&V Draft IV&V Status Review Meeting with DOH
- 8. IV&V Draft IV&V Status Review Meeting with RSM and DOH

Eclipse IV&V® Base Standards and Checklists

Artifacts reviewed during the June 2021 reporting period:

- 1. Daily Scrum Notes (selected)
- 2. Twice Weekly Issues Meeting Notes (selected)

6.000	1/31/2020	The project lacks a documented 'Definition of Done", which could challenge the project's ability to fully achieve the goals of Phase 3.	BHA does not have a documented 'Definition of Done' (DOD) for the BHA Top 100 User Stories of for Phase 3. Because of this, it is unclear how proposed functionality/features are prioritized for each sprint, and throughout Phase 3.	The 'Definition of Done" document guides the Project's vision, business, and technical goals that are important inputs for stakeholders to develop a Roadmap for Phase 3. Without the 'Definition of Done' document, the project is likely to struggle to prioritize proposed functionality/features which may be equally important but are at odds with each other.	Project is currently in the process of creating the Definition of Done. IV&V recommends that the project create this document and socialize this with project team before end of Feb 2020 IV&V recommends that the project consider the items from the prioritized list, available resources and define "Done" as a percentage of the identified priority list with room for flexibility to add any other features/enhancements that will be identified during Phase 3.	02/29/2020 - The project created and documented the Phase 3 Definition of Done and socialized it in February. IV&V recommends the project continually review and update the Definition of Done, adjusting as/if necessary. IV&V will continue to monitor the project's adherence to Definition of Done and progress against it but is closing out this concern as of the February report.	Project Management	Concern	N/A	Closed	Definition of Done completed and socialized.	General	V Ramesh
7.000	1/31/2020	The lack of consistent backlog grooming could result in the project backlog having obsolete, non-estimated, and poorly defined user stories.	The backlog of defects, requests, and user stories continues to grow. Currently, there are approximately 429 defects and requests, of which almost 200 have a status of 'New'. IVV notes that a large percentage of the backlogged work items do not have user story points estimated. Many of the items listed in the backlog are old, and some may have had needs or requirements change over time or may now be obsolete. IV&V notes that DDD and CAMHD have initiated this effort and agreed to prioritize grooming the backlog by the end of February.	is a primary tenet of agile software development. If a backlog is carrying work items that may not ever be completed for any reason, they should be removed from the backlog to ensure its viability.	include deprecating items no longer needed, and fully defining those items that are not yet fully defined, readying them for configuration or developer resources. To the extent feasible, BHA should involve RSM SMEs in this process, if only for the interim to get "caught up" on grooming efforts. (Closed) W recommends that the project consider utilizing an age-based methodology for	06/30/2020 - IV&V has observed for another month that the project continues to groom the backlog. As a result, we are closing this finding. 05/31/2020 - The project team has determined the backlog grooming effort has caught up, as details for release 3.9 are completed and 3.10 is near completion. IV&V will keep this finding open for an additional month to validate that the backlog continues to be groomed as new stories and defects are identified. Efforts to keep the backlog groomed should take place each month so that release planning efforts are not delayed. 04/30/2020 - The project reported that 97% of the original backlog has been estimated at this time. That said, CAMHD has determined that there are several older, and possibly no longer necessary user stories in the backlog that are candidates for deletion. IV&V will keep this finding open and will re-assess it for impact during the month of May. 03/31/2020 - IV&V validates that the backlog grooming effort has made great progress,	Project Management	Risk	Low	Closed	The project has demonstrated they are consistently grooming the backlog.	General	D Macdonald

8.000	bandwidth may not be sufficient to meet the needs of the project, which could compromise project productivity.	The BHA Technical Team plays a role that is critical to project success. Currently, the responsibilities associated with the BHA Technical Team have expanded beyond their collective available bandwidth. IV&V notes that BHA began addressing this bandwidth issue, which includes increased collaboration with key RSM resources, and are working to potentially change the structure of the Technical Team.	efforts of all technical DOH staff on the project. As such, the Team's time is both extremely valuable and scarce. If the Team's expected workload exceeds bandwidth, the project could experience bottlenecks. Optimization of the BHA Technical Team's time is to the benefit of the project and plays a critical role in the project's ability to hit performance targets and achieve the Phase 3 definition of done.	The Project should investigate mechanisms of increasing the bandwidth of the BHA Technical Team, either by adding resources through new hires, or vendor contracts. The Project should assess, where possible, if there are responsibilities of the BHA Technical Team that can be reassigned to other project staff. The Project should evaluate where process inefficiencies can be addressed and streamlined to possibly free up the BHA Technical Team's availability. The Project should consider the formation of a first level M&O resource team to triage/address production defects in a timely manner, without disrupting new development work. The Project should consider procurement of an online training toolset to support OCM and technical efforts to offset the need for in-person training - COMPLETED.	06/30/2021 - There were no substantive changes observed in June as hiring within the State continues to be a challenge. The bandwidth of BHA senior technical staff trained in the Dynamics environment continues to be inadequate in meeting the demands of the Project. This finding will remain as a high priority issue until resolved by BHA. 05/31/2021 - No substantive changes were noted in May. BHA continued to assume more lead responsibilities in the areas of user story ownership and performing code reviews. However, the bandwidth of BHA senior technical staff trained in the Dynamics environment is not adequate to meet the demands of the project. This technical resource shortage has compromised project productivity and quality whereby team members are focusing on resolving defects rather than delivering planned DDI work, which continues to be pushed to subsequent releases. While RSM is adding resources to support Releases 3.16 and 3.17, so must BHA. This finding is a major concern for IV&V and as a	Sprint Planning	Issue	High	Open		General	D Macdonald
9.000	product features to be delivered in the near term (next 3 months),	BHA does not have a single, definitive Product Roadmap for Phase 3 that addresses the functionalities, features, and / or enhancements to be built in order to fully address BHA's business needs. IV&V met with RSM and BHA on this topic in January, and notes that the project is actively working to address this concern.	A Roadmap is a tool that guides an agile project on what functionalities/features are targeted to be built and released and when users can have access to these functionalities. Without a defined Roadmap the project may not be able to effectively scope the top features to be released within Phase 3 and ensure the correct resources are available to accomplish the goal of each sprint and the Phase.	Term, and Long Term Roadmap. IV&V recommends the Project complete this by the end of February 2020 to understand if there are any constraints (resources, budget) that may hinder the project from releasing the needed functionalities/features targeted for Phase 3 as documented in the Definition	result, we are raising the criticality of this 02/29/2020 - In February, the project further defined the Phase 3 Product Roadmap and aligned it with the Phase 3 Definition of Done. IV&V recommends the project continually	Project Management	Concern	N/A	Closed	Product Roadmap aligned with Definition of Done	General	V Ramesh

20.000	3/28/2021	expiration will require BHA to perform transition of the D365 solution to the State prior to contract end.	The RSM contract for Phase 3 is currently planned to complete in September 2021. BHA will need a transition plan to ensure that it has all knowledge transfer and is fully capable of managing all aspects of supporting and maintaining the D365 solution without vendor support until at least the Phase 4 expansion effort is procured and initiated. The Phase 4 effort is currently expected to commence late in the 4th quarter of 2021, or early in the first quarter of 2022. The Phase 4 procurement scope is planned to include additional DD&I activities, as well as M&O support activities.		Work hand in hand with RSM to ensure that DOH has the knowledge, skills, and capabilities to perform all aspects of the project prior to September 2021. If the knowledge transfer takes more time than planned, consider developing, testing, and promoting less releases in the summer months as the transition off of vendor support approaches.	05/31/2021 - Per CAMHD, the RSM contract amendments to extend the DD&I effort (Mod 5) to the end of December 2021 and also provide M&O services (Mod 6) through May 2022 were fully executed in May. IV&V is closing this preliminary concern. 04/30/2021 - The RSM contract amendment is still pending approval. This amendment will extend the DD&I effort (Mod 5) to the end of December 2021 and will also provide M&O services (Mod 6) through May 2022. Mod 5 is expected to be approved in May 2021. This will delay the near-term need for a Transition Plan until first quarter 2022. IV&V will continue to monitor this finding.	Project Management	Concern		Closed	The RSM amendments were fully executed in May 2021.	Vic Dudoit
21.000	4/30/2021	The DDD Project Manager will be on leave and unavailable to the project starting in May.	her absence may cause an increased level of risk to the project. DDD has	The DDD Project Manager is critical to all daily project interactions affecting DDD from a functional and managerial perspective. If her duties are not re-assigned to capable staff prior to her planned absence, DDD will be in a challenged position to effectively contribute to at least the next several releases.	1) IV&V recommends DDD to continue to look for opportunities to augment the existing technical staff in order to fully support current DDI project work. 2) IV&V recommends DDD to consider augmenting their current PM/Business staff in order to allow their technical staff to focus on technical duties.	06/30/2021 - The absence of the DDD Project Manager continues to cause bandwidth/workload challenges for DDD technical staff. Time available for typical DDD CRM assignments was limited in June due to this resource constraint. IV&V has promoted this finding from a Preliminary Concern to a Medium criticality issue and will continue to monitor. 05/31/2021 - The highest priority tasks and activities typically accomplished by the DDD Project Manager have been re-assigned to other DDD staff. IV&V notes that this results in some level of bandwidth/workload challenges for DDD technical staff.	Project Management	Issue	Medium	Open		D Macdonald
22.000	6/30/2021	'	The continued volume of unplanned rework may have an impact on delivering planned DDI functionality with only 4 possible DDI releases remaining for completion.					Preliminary Co	l oncern			D MacDonald
