# SENATE RESOLUTION

REQUESTING THE BLOOD BANK OF HAWAII TO IMMEDIATELY ADOPT THE  
FOOD AND DRUG ADMINISTRATION'S UPDATED GUIDANCE WHICH  
SHORTENS OR ELIMINATES THE DEFERRAL PERIOD FOR CERTAIN  
BLOOD DONORS.

1           WHEREAS, due to fears of the coronavirus disease 2019  
2 (COVID-19) pandemic, blood bank donations decreased  
3 substantially in 2021, resulting in an historic blood inventory  
4 shortage in the State; and

5  
6           WHEREAS, the Blood Bank of Hawaii is the sole provider of  
7 blood to the eighteen civilian hospitals in the State and one on  
8 Guam; and

9  
10           WHEREAS, regular blood inventory maintenance requires one  
11 hundred and fifty blood donors every day; however, because of  
12 the State's blood shortage, the Blood Bank of Hawaii has been  
13 forced to undersupply the State's hospitals, leaving them with  
14 between sixty and eighty percent of the normal supply; and

15  
16           WHEREAS, the blood supply shortage is a health crisis and  
17 poses a significant risk to those who suffer medical emergencies  
18 that require blood transfusions; and

19  
20           WHEREAS, the federal Food and Drug Administration (FDA) is  
21 the government agency that determines blood donor eligibility  
22 requirements; and

23  
24           WHEREAS, due to the shortage of blood donations nationally  
25 during the COVID-19 pandemic, the FDA revised its blood donor  
26 eligibility guidance for several categories of blood donors,  
27 which shortened or eliminated completely the deferral period, or  
28 the amount of time these donors must wait before donating blood;  
29 and

30  
31           WHEREAS, for male donors who would have been deferred for  
32 having sex with another man, the FDA changed the recommended  
33 deferral period from twelve months to three months since the  
34 donor's last sexual encounter; and

# S.R. NO. 28

1  
2 WHEREAS, for female donors who would have been deferred for  
3 having sex with a man who had sex with another man, the FDA  
4 changed the recommended deferral period from twelve months to  
5 three months since the donor's last sexual encounter; and  
6

7 WHEREAS, for those donors who would have been deferred for  
8 tattoos or piercings, the FDA changed the recommended deferral  
9 period from twelve months to three months from receiving the  
10 tattoo or piercing; and  
11

12 WHEREAS, for those donors who would have been deferred for  
13 traveling to malaria-endemic areas (and are residents of malaria  
14 non-endemic countries), the FDA changed the recommended deferral  
15 period from twelve months to three months, or no deferral period  
16 in certain cases; and  
17

18 WHEREAS, for those donors would have been deferred for  
19 spending time in certain European countries or on military bases  
20 in Europe who were previously considered to have been exposed to  
21 a potential risk of transmission of Creutzfeldt-Jakob Disease or  
22 Variant Creutzfeldt-Jakob Disease, the FDA eliminated its  
23 recommended deferrals; and  
24

25 WHEREAS, the FDA's updated guidance relating to blood  
26 donation has been in place since at least August 2020; and  
27

28 WHEREAS, the Blood Bank of Hawaii states on its website  
29 that it "strictly adheres to FDA regulations"; and  
30

31 WHEREAS, the Blood Bank of Hawaii has yet to adopt any of  
32 the FDA's updated guidance; now, therefore,  
33

34 BE IT RESOLVED by the Senate of the Thirty-first  
35 Legislature of the State of Hawaii, Regular Session of 2022,  
36 that the Blood Bank of Hawaii is requested to immediately adopt  
37 the Food and Drug Administration's updated guidance, shortening  
38 or eliminating the deferral period for certain blood donors; and  
39  
40

# S.R. NO. 28

1 BE IT FURTHER RESOLVED that certified copies of this  
2 Resolution be transmitted to the Director of Health and Chair of  
3 the Blood Bank of Hawaii.
