**Testimony in SUPPORT of S.B. 975
RELATING TO HEALTH**

SENATOR JOY A. SAN BUENAVENTURA, CHAIR
SENATE COMMITTEE ON HEALTH AND HUMAN SERVICES

SENATOR JARRETT KEOHOKALO, CHAIR
SENATE COMMITTEE ON COMMERCE AND CONSUMER PROTECTION

Hearing Date: February 15, 2023

Room Number: Conference Room 229
& Videoconference

1 **Fiscal Implications:** The Department of Health (DOH) defers to the Department of Taxation
2 (DOTAX) and to the Office of the Attorney General (AG) on the fiscal implications for
3 implementing and enforcing the proposed measure.

4 **Department Testimony:** The DOH supports Senate Bill 975 (S.B. 975) as a critical public
5 health measure to address Hawaii's youth vaping epidemic. S.B. 975 establishes the offense of
6 unlawful shipment of tobacco products, and includes electronic smoking devices (ESDs) and
7 e-liquids within the definition of tobacco products and increases the wholesale license fee and
8 retail tobacco permit fee for persons engaged as wholesalers/dealers or retailers of cigarettes and
9 tobacco products. The measure would also repeal state laws that establish and govern the
10 Electronic Smoking Device Retailer Registration Unit within the Department of the AG;
11 provisions of the Cigarette Tax and Tobacco Tax Law that govern delivery sales; and state law
12 governing smoking that preempts and voids local ordinances and regulations conflicting with
13 state law.

14 The absence of protective policies to act as a preventive buffer between the promotion of
15 enticing ESDs, also known as e-cigarettes, and youth, contributed to the ongoing rise in frequent
16 use and unrestricted access to nicotine. Thirty-one percent of Hawaii's high school and eighteen

1 percent of Hawaii’s middle school students reported using e-cigarettes in the past 30 days with
2 highest rates on the neighbor islands.^{1,2} The unrestricted promotion of e-cigarettes has addicted a
3 new generation of young people to nicotine, increased their exposure to harmful substances, and
4 the likelihood of their smoking cigarettes in the future.³ According to the Federal Trade
5 Commission, the amount of nicotine in disposable ESDs popular with youth and young adults
6 went up 60% from 2015 to 2018 and this raises serious public health and safety concerns because
7 of the long-term effects on their brain development.⁴ Comprehensive evidence-based prevention
8 policies are needed that restrict access and regulate e-cigarettes.

9 Hawaii does not regulate ESDs through licensing, permitting, nor taxation. ESDs are not
10 taxed like other tobacco products and often can be purchased at lower prices than cigarettes.
11 According to the U.S. Surgeon General, increasing the price of tobacco products is the single
12 most effective way to reduce consumption.⁵ An economic study by the University of Illinois,
13 reported that increasing the price of ESDs by 10% has been shown to lead to a 10% to 18%
14 reduction in the demand and consumption of ESDs – a higher price elasticity compared to
15 combustible cigarettes. Increasing the price of tobacco products has the greatest impact on
16 youth, who are particularly price sensitive.⁶ Further, the imposition of an excise tax equal to
17 70% of the wholesale price of each e-liquid and ESD will be consistent with the tax on other
18 tobacco products.

⁶ Chaloupka, F. Macro-Social Influences: The Effects of Prices and Tobacco Control Policies on the Demand for Tobacco Products, 1 Nicotine & Tobacco Research S105 (Supp. 1 1999).

1 The DOH supports the restriction of shipping tobacco products to anyone other than a
2 licensed wholesaler. Unregulated shipping (or importing) of tobacco products, particularly,
3 ESDs ordered online, has created a dangerous loophole, by providing an appealing and
4 accessible option for underage users. In the current unregulated online market, youth easily and
5 often circumvent the age verification process for purchasing tobacco. Minors were successful
6 in buying ESDs online 93% of the time despite age restrictions according to the Internet
7 Tobacco Vendors Study (ITV), supported by the National Cancer Institute and the U.S. Food
8 and Drug Administration (FDA). Another study found that ESDs were often shipped from
9 internet vendors without instructions or health warnings. Due to the easy access for minors
10 through online marketing, public health researchers recommend more vigorous policies to
11 prohibit sales to minors.^{7,8}

12 Requiring licensure and retail permitting under the DOTAX would bring ESD and
13 e-liquid vendors in alignment with the traditional cigarette and tobacco retailers and would
14 provide accurate data for compliance surveillance. As of 2022, 33 states, the District of
15 Columbia, the Northern Mariana Islands, and the U.S. Virgin Islands required retailers to have a
16 license to sell ESDs.⁹ Tobacco licensing is an effective tool for limiting the negative public
17 health consequences of tobacco use by ensuring that wholesalers and retailers comply with
18 responsible sales practices. Increasing the licensure and permitting fees, which have remained
19 unchanged since 1995, despite high tobacco taxes and ever-increasing tobacco industry
20 expenditures in marketing and advertising, would be a further positive move.

21 The DOH also supports the elimination of preemption language as a social justice issue;
22 there is an urgent need for counties to have the ability to regulate access to tobacco products
23 especially among youth and young adults. According to Julie Aoki in the Journal of Law and

⁷ Williams RS, Derrick J, Ribisl KM. Electronic Cigarette Sales to Minors via the Internet. *JAMA Pediatric*. 2015;169(3): e1563. doi:10.1001/jamapediatrics.2015.63.

⁸ Kong AY, Derrick JC, Abrantes AS, Williams RS. *What is included with your online e-cigarette order? An analysis of e-cigarette shipping, product and packaging features.* *Tobacco Control*. [Epub ahead of print] June 29, 2016. doi:10.1136/tobaccocontrol-2016-053061.

⁹ U.S. Department of Health and Human Services, Centers for Disease Control and Prevention, STATE System Licensure Fact Sheet, <https://www.cdc.gov/statesystem/ecigarette.html>

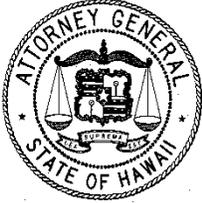

1 Medical Ethics, “From a health equity standpoint, the use of local knowledge to forge
2 community-specific solutions enables localities to employ a targeted approach to combat health
3 disparities and ensue equitable access to better public health.”¹⁰ The DOH has received many
4 requests from counties, neighborhood boards, and community members for public health support
5 to protect their children and youth from easy access to e-cigarettes, and the ESD regulations
6 proposed in S.B. 975 responds to this request and returns county control to do more to respond to
7 the needs of their communities.

8 The DOH supports S.B. 975, as a critical legislative approach to address the youth vaping
9 crisis and protect the health of Hawaii’s youth.

10 Thank you for the opportunity to testify.

11 **Offered Amendments:** None

**TESTIMONY OF
THE DEPARTMENT OF THE ATTORNEY GENERAL
KA 'OIHANA O KA LOIO KUHINA
THIRTY-SECOND LEGISLATURE, 2023**

ON THE FOLLOWING MEASURE:
S.B. NO. 975, RELATING TO HEALTH.

BEFORE THE:
SENATE COMMITTEES ON HEALTH AND HUMAN SERVICES AND ON
COMMERCE AND CONSUMER PROTECTION

DATE: Wednesday, February 15, 2023 **TIME:** 9:30 a.m.

LOCATION: State Capitol, Room 229

TESTIFIER(S): Anne E. Lopez, Attorney General, or
Richard W. Stacey, Deputy Attorney General

Chairs San Buenaventura and Keohokalole and Members of the Committees:

The Department of the Attorney General (Department) strongly supports this bill and offers a suggested amendment.

The bill seeks to address the health dangers caused by the rapidly growing use of electronic smoking devices in Hawaii, including among the youth. This bill establishes the offense of unlawful shipment of tobacco products; amends the definition of "tobacco products" in chapter 245, Hawaii Revised Statutes (HRS), to subject electronic smoking devices and e-liquids to taxation and regulation under the Department of Taxation; increases licensing and permit fees for wholesalers, dealers, and retailers of tobacco products; repeals chapter 28, part XII, HRS, relating to the Electronic Smoking Device Retailer Registration Unit; and repeals section 245-17, HRS, relating to Delivery Sales.

The Department supports subjecting electronic smoking devices to taxation and regulation under chapter 245, HRS, and repealing part XII of chapter 28, HRS. The Electronic Smoking Device Retailer Registration Unit (ESDRRU) was established within the Department under part XII of chapter 28, HRS, and currently has 695 electronic smoking device retailers registered with this unit. Approximately 90 percent of those retailers concurrently hold a tobacco retail permit with the Department of Taxation. Combining the regulation of electronic smoking devices with the retail tobacco

permitting process and the wholesale licensing process -- a function already within the purview of the Department of Taxation -- would render the ESDRRU unnecessary. Including electronic smoking devices under the purview of the Department of Taxation would conserve resources and make the regulation of electronic smoking devices a more efficient process for retailers, wholesalers, and the State.

We also recommend a change to the wording as follows:

For the offense of "unlawful shipment of tobacco products", subsection (a) on page 8, lines 7-14, does not contain any state of mind. However, subsections (c) and (d) state "if the person or entity knowingly ships or causes to be shipped" (Page 9, lines 1-8). For consistency and clarity, we recommend the word "knowingly" be added on page 8, line 12, to read, "(2) **Knowingly** ships or causes to be shipped"

We respectfully ask the Committees to pass this bill with the suggested amendment and thank you for this opportunity to testify.

Members of the Committee on Commerce and Consumer Protection

Re: SB 975 Relating to Health, Strong Support

Senators Buenaventura, Aquino, Keohokalole, Fukunaga, and members of the Committees on Health and Human Services and Commerce and Consumer Protection:

SB 975 will address the continued escalation of e-cigarette use among our teens, putting our children's health at risk – including becoming a lifelong addiction. By addressing the unlawful shipment of e-cigarettes, taxing them as tobacco products, and licensing and permitting sellers, you will implement comprehensive regulations to address this crisis.

As a lifelong resident of the State of Hawai'i, I am expressing my **STRONG SUPPORT** of this bill. I strongly support proven strategies like taxing tobacco products and cigarettes. E-cigarettes are now the most popular tobacco product among youth – and that's largely because it's not subject to many of the regulations other tobacco products are subject to. By implementing the same policies and regulations Hawai'i used to reduce cigarette use to record lows, we can reverse the trends in youth e-cigarette use.

Hearing *elementary* school teachers and administrators from our district complain about the students using flavored vaping products and having to call 911 for health emergencies is gut-wrenching and unacceptable.

E-Cigarettes are the only tobacco products without a tax! Please also keep in mind that e-cigarettes are NOT FDA-approved for cessation and this regulation DOES NOT stop access to FDA-approved nicotine replacement therapy (approved smoking cessation products).

If we are truly trying to support our keiki and citizens of Hawai'i, I'm again respectfully requesting your support of this bill. If our aim is to protect our keiki and reduce the burden of tobacco in our Native Hawaiian communities, we must do better and we must do it now.

**American
Heart
Association.**

**American Heart Association testimony in SUPPORT of SB 975,
“Relating to Health”**

The American Heart Association supports SB 975.

Cigarette smoking is responsible for more than 480,000 deaths per year in the United States, including more than 41,000 deaths resulting from secondhand smoke exposure. This is about one in five deaths annually, or 1,300 deaths every day. Total economic cost of smoking in the U.S. is more than \$300 billion a year, including nearly \$170 billion in direct medical care for adults. More than \$156 billion in lost productivity due to premature death and exposure to secondhand smoke. In Hawaii alone, it annually claims 1,100 lives each year and \$526 million in healthcare costs are directly attributed to smoking in our state.

Hawaii is in the midst of a youth epidemic concerning the use of electronic smoking devices. Hawaii has the highest rate of middle school-aged student use of those products in the nation, and the second highest high school student usage rate.

Even though there is more work needed to fully understand all the dangers of e-cigarettes, there’s plenty of evidence they’re harmful for growing minds and bodies.

E-cigarettes have been falsely marketed as a safe alternative to traditional cigarettes and as a tool to help adult smokers quit. **Those claims are untrue. The federal Food and Drug Administration has not approved a single e-cigarette product as an effective, or safe nicotine cessation product.**

Supporters of the tobacco industry often hold up a 10-year-old study done in England, the results of which have been characterized and repeated in the popular media as e-cigarettes are “95% less risky” or “95% less harmful” than combustible cigarettes. However, as the study’s authors noted in a sweeping statement regarding the shortcomings of their own work, “A limitation of this study is the lack of hard evidence for the harms of most products on most of the criteria.” Pro-tobacco representatives fail to mention that part of the study.

Also, the fact that the study, published in The New England Journal of Medicine, was conducted in England is significant because the e-cigarettes in England are far different from those in the U.S. English products have much lower levels of nicotine, regulated by the government, and physicians there actually encourage their use to quit smoking.

There is ample evidence that the range of e-cigarette products available today in Hawaii and the U.S. are very different from those studied in July 2013.

E-cigarette liquids have changed considerably from 2013, with widespread availability of thousands of flavors that use chemicals “generally recognized as safe” to eat **but, importantly, not to inhale.** Perhaps the most striking change has been the pervasive marketing of liquids with “nicotine salt.” Nicotine salt is made by adding an acid to free-base nicotine, thus introducing another potential toxicant

that was rare in 2013. Relative to free-base nicotine, aerosolized nicotine salt liquid is less aversive to inhale, allowing users to increase the nicotine concentration of the liquid and likely increase their own nicotine dependence. Nicotine salt e-cigarette liquids used in most e-cigarette products available today can contain unusually high levels of nicotine. One e-cigarette refill pod can contain as much or more nicotine as an entire pack of cigarettes and kids are sometimes vaping 2-4 pods a day. And open pod e-cigarette products popular among Hawaii youths can contain even much more nicotine.

That's especially troubling because many studies in animals show nicotine is a neurotoxin (a poison affecting the nervous system). It can affect brain development from early fetal life through adolescence, permanently changing the ability to think or reason.

More recent research has shown that e-cigarette use increases heart rate, blood pressure, and platelet activation, and decreases flow-mediated dilation and heart rate variability, effects that are prognostic of long-term cardiovascular risk such as myocardial infarction (heart attack) and coronary artery disease. Other studies as recent as November 2022 indicate that e-cigarette users may be at increased risk for by decreasing blood flow in the heart even more than traditional cigarettes and can worsen heart disease risk factors such as high cholesterol.

Tobacco companies are targeting youth and addicting a new generation to tobacco and nicotine, reversing the decades-long progress that has been made in reducing youth tobacco use.

Big Tobacco has a history of misrepresenting facts about nicotine and smoking. So, vaping-safety claims from industry or research supported by industry should be met with skepticism.

The idea that vaping is a better way to quit cigarettes than reliable methods using FDA-approved nicotine replacement products isn't backed up by the weight of science.

Of the small number of studies about this, most show no advantage for e-cigarettes over the temporary use of FDA-approved products such as gum, lozenges, and patches. The latter products have been proven helpful as part of an overall program for quitting, which should also include counselling and can include medications to reduce cravings.

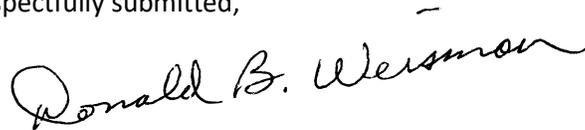

Some U.S. smokers have used e-cigarettes to quit, but a growing body of studies shows that approach doesn't work for many people. They cut back, but they still smoke while vaping and they remain addicted. That's called "dual use" in public health literature. The dangers of cigarettes remain, with the added dangers of vaping.

The Association advises anyone quitting smoking to get off nicotine products altogether, using FDA-approved tools proven to be effective. We also don't want anyone to ever start using any nicotine-containing product.

E-cigarettes are now the most popularly used tobacco product among Hawaii's youth. According to recent Department of Health data, over 40 percent of Hawaii's youths have tried e-cigarettes, and 30 percent are now regular users. On neighbor islands, regular use of e-cigarettes by youths tops 30 percent.

The American Heart Association of Hawaii urges legislators to pass comprehensive, science-based policies (including banning flavors from all tobacco products, increasing taxes on e-cigarette products to create parity with traditional tobacco products, and requiring retailers who sell e-cigarettes, to obtain a license tied to meaningful fines for illegal sales to minors) to help reduce Hawaii youth vaping epidemic. **Please support SB975 without amendment.**

Re: Strong Support for SB975 Relating to Electronic Smoking Devices

Hrg: Wednesday, February 15, 2023, at 9:30 AM, Conf Rm 229

The Coalition for a Tobacco-Free Hawai'i, a program of the Hawai'i Public Health Instituteⁱ is in **strong support of SB 975**, which would close the loophole of online sales to minors, include e-liquid and electronic smoking devices into the definition of "tobacco products," therefore requiring the same taxes, permitting, and licensing as applies to tobacco products in Chapter 245.

Comprehensive regulations on e-cigarettes are necessary to reverse the youth vaping epidemic.

Over two decades of tobacco prevention and control policy has helped Hawai'i save \$1 billion in healthcare costs.ⁱⁱ lowered the adult smoking rate to 11.6% (eighth lowest in the nation),ⁱⁱⁱ and reduced smoking prevalence among high school students to 5.3% in 2019.^{iv} These gains were achieved through a comprehensive approach which included: smoke-free air laws, imposing tobacco taxes, age restrictions, removing most flavors in cigarettes, and investments in tobacco prevention education and cessation.

E-cigarettes have evaded many tobacco prevention and control laws other tobacco products are subject to, leading to the rise of e-cigarettes, undoing decades of progress. In 2019, 1 in 3 (30.6%) public high school students and nearly 1 in 5 (18%) public middle school students in Hawai'i reported using e-cigarettes.^v The state has an opportunity to reverse the youth vaping epidemic by implementing comprehensive policies and programs.

E-cigarette use among youth and young adults has become a public health concern.

According to the 2019 YRBS, Hawai'i has the third highest e-cigarette rate in the Country, with 1 in 3 (30.6%) public high school students and more than 1 in 6 (18%) public middle school students reporting that they are regularly vaping^{vi}. Because Electronic Smoking Devices (ESDs) remain unregulated, e-cigarette companies have aggressively marketed their products by glamorizing their use, using celebrities and young adults as endorsers, and making false health claims. E-cigarettes often contain nicotine, which is addictive and harmful, particularly to adolescents whose brains are still developing.

Need to stop the unlawful online sales of ESDs

Currently, those under 21 can obtain e-cigarettes via the Internet because online age verification is easily by-passed by youth. Limiting online purchases to licensed tobacco retailers and wholesalers will close this loophole in our Tobacco 21 law.

Taxation of Tobacco Products, including ESDs

Since 2016 e-cigarettes have been classified as tobacco products by the FDA^{vii}. Therefore, Including ESDs as part of the definition of tobacco products in Chapter 245 would bring much-needed clarity. Once defined as a tobacco product in that chapter, ESDs would be taxed with parity and be included in an existing regulation system via permitting, licensure, and taxation, making it easier to implement enforcement. In a 2022 Ward survey of registered voters, 91% of those surveyed support taxing vaping products the same as other tobacco products, and 94% of respondents felt the state should dedicate a portion of the revenue from those taxes to prevention and cessation programs.

Because ESDs are not subject to the Hawai'i State tobacco tax laws, they are seen as lower-priced tobacco alternatives with virtually no restrictions that can appeal to the youth. Raising taxes and increasing the price of tobacco products is a proven strategy to reduce consumption for both adults and youth. Currently, 29 states and the District of Columbia are taxing e-cigarettes.^{viii}

ESD licensing and permits protect both consumers and merchants.

The Coalition supports requiring ESD sellers and vendors to obtain a tobacco permit and/or license, which is currently required for any tobacco retailer or wholesaler. This consistency would assist with communicating and enforcing current tobacco tax and purchase laws.

This comprehensive regulation would **NOT** apply to any FDA-approved Nicotine Replacement Therapy (NRT) or FDA-approved non-nicotine cessation products. NRTs include over-the-counter and prescription products.^{ix} E-cigarettes are not among these approved cessation methods.

Hawai'i has made enormous progress on tobacco control, and we ask the legislature to take the necessary steps to protect our youth from a lifetime of addiction. Thank you for considering this measure which will comprehensively regulate electronic smoking.

Thank you for considering the policies that will better protect the health of our communities.

Mahalo,

Peggy Mierzwa
Policy and Advocacy Director
Hawai'i Public Health Institute

ⁱ The Coalition for a Tobacco-Free Hawai'i (Coalition) is a program of the Hawai'i Public Health Institute (HIPHI) that is dedicated to reducing tobacco use through education, policy, and advocacy. With more than two decades of history in Hawai'i, the Coalition has led several campaigns on enacting smoke-free environments, including being the first state in the nation to prohibit the sale of tobacco and electronic smoking devices to purchasers under 21 years of age.

The Hawai'i Public Health Institute is a hub for building healthy communities, providing issue-based advocacy, education, and technical assistance through partnerships with government, academia, foundations, business, and community-based organizations.

TESTIMONY BEFORE THE SENATE COMMITTEE ON HEALTH & HUMAN
SERVICES AND THE COMMITTEE ON COMMERCE AND CONSUMER
PROTECTION

RE: SB 975 - RELATING TO HEALTH

WEDNESDAY, FEBRUARY 15, 2023

OSA TUI, JR., PRESIDENT
HAWAII STATE TEACHERS ASSOCIATION

Chair San Buenaventura, Chair Keohokalole, and Members of the Committees:

The Hawaii State Teachers Association **supports SB 975**, relating to health.

E-cigarette use continues to escalate among our teens. It puts our children's health at risk and becomes a lifelong addiction. By addressing unlawful shipment of e-cigarettes, taxing them as tobacco products, and licensing & permitting sellers, we are implementing comprehensive regulations that will address this crisis.

E-cigarettes have evaded many tobacco regulation laws for decades, leading to a sharp rise in the use of these products, especially by our youth, who are enticed by their unregulated marketing and lack of proper regulatory controls on an addictive drug, nicotine. **Thus, comprehensive regulation will be a major step in reversing youth use of e-cigarettes.**

Two decades of comprehensive regulation on cigarettes and other tobacco products helped Hawaii and has saved \$1 billion in healthcare costs and reduced high school smoking to 5.3% in 2019 (CDC YRBS 2017-19).

Contrary to what you may have heard, e-cigarettes are not FDA-approved cessation devices. Comprehensive tobacco regulation will not stop access to FDA-approved nicotine replacement therapy (NRTs)- approved smoking cessation products.

E-cigarettes are the only tobacco products without a tobacco tax, this needs to be changed with this bill. We, as a state, must also address unregulated, unchecked online sales of e-cigarettes directly to customers. We must require face-to-face purchases for that will make it harder for our youth to obtain these products via the internet. Licensed tobacco retailers would still be able to receive shipment of products.

Osa Tui, Jr.
President
Logan Okita
Vice President
Lisa Morrison
Secretary-Treasurer
Ann Mahi
Executive Director

Taxation, regulation, licensing & permitting, education, and cessation services are components of comprehensive tobacco regulation and a key to lowering the use of tobacco by our youth.

The use of e-smoking products among our youth is at epidemic levels, especially in Hawaii. According to the 2017 Youth Risk Behavior Survey, **Hawaii has one of the highest rates of middle and high school usage in the nation at 15.7% and 25.5% respectively.** Moreover, 27% of middle school students and a whopping 42% of high school students have tried e-cigarettes. On the neighbor islands, usage trends are particularly concerning—in Hawaii county 34% of students reported they are regular users while on Kauai 32% are regular users.

Adolescence is a time of crucial brain development; it has been documented that nicotine exposure during adolescence and young adulthood can cause addiction and harm the developing brain. Additionally, nicotine is not the only harmful ingredient in electronic smoking devices; other harmful and potentially harmful ingredients include ultrafine particles that can be inhaled deep into the lungs, flavorants such as diacetyl, a chemical linked to serious lung disease, volatile organic compounds, and heavy metals such as nickel, tin, and lead.

Lastly, thank you for not adding any fines for our youth, as HSTA opposes these fines, as we feel our students are the victims in this case. It is the predatory tactics of the vaping industry on our youth that need to be regulated and taxed. So please do NOT add any fines or punishment on our youth who are the victims here. We just want to make this stance clear from the start.

To reduce the youth vaping epidemic and ensure the long-term health and wellbeing of our keiki, the Hawaii State Teachers Association requests you **support** this bill.

Date: February 15, 2023

To: Senator Joy A. San Buenaventura, Chair
Senator Henry J.C. Aquino, Vice Chair
Senator Jarrett Keohokalole, Chair
Senator Carol Fukunaga, Vice Chair
Members of the Committee on Health and Human Services and Committee on Commerce and Consumer Protection; Relating to Health

From: Members of the University of Hawaii Student Health Advisory Council

Re: Support for SB975, Relating to the Youth Vaping Epidemic

Hearing: Wednesday, February 15 at 9:30AM Via Videoconference

Thank you for the opportunity to submit testimony in SUPPORT of SB 975 which would establish unlawful shipment of tobacco products a criminal offense.

The Student Health Advisory Council has plays a pivotal role in the development and implementation of health policies and tobacco education on the UH System campuses. We remain deeply committed to the mission of reducing the use of all tobacco products, including electronic smoking devices, among adolescents and young adults.

With products like Flume and other popular electronic smoking devices, it is increasingly clear that these products are addicting a whole generation of youth to a harmful product. The Surgeon General has gone so far as to declare youth e-cigarette use an epidemic, and states that there is an urgent need to protect young people from a lifetime of nicotine addiction and associated health risks.

Electronic cigarettes are now the most commonly used form of tobacco among young people in the United States, surpassing conventional tobacco products, including cigarettes, cigars, chewing tobacco, and hookahs. The sale of flavored tobacco products entices young people to start using these harmful products which can lead to addiction and cause damage to the developing brain. Unregulated and unchecked online sales of e-cigarettes are a problem as consumers are not age-verified upon the sale. Establishing the sale of illegal tobacco products as a criminal offense will make the wholesale of tobacco products act as a deterrent toward sellers and wholesalers from selling to others including youth and those with lower socioeconomic status that are disproportionately affected along with people of color.

To crack down on the unlawful shipment of tobacco products would deter the sale of it from happening here on Oahu as legal consequences may be faced. SB 975 as well as providing tobacco education and cessation programs without monetary penalties for youth, is imperative if we are committed to protecting the health and well-being of our communities. Taxation, regulation, licensing and permitting are components to lowering tobacco usage. Therefore, we urge you to support this measure and establish the unlawful shipment of tobacco products a criminal offense in the State of Hawaii.

Mahalo,

Student Health Advisory Council

Honorable Chairs Senators Joy San Buenaventura and Jarrett Keohokalole
Honorable Vice-Chairs Senators Henry Aquino and Carol Fukunaga
Members of the Committees on Health & Human Services and Commerce & Consumer Protection

RE: **Strong Support for SB975, Relating to Health (unlawful tobacco shipment)**

Dear Chairs San Buenaventura and Keohokalole, Vice Chairs Aquino and Fukunaga and members of the Health & Human Services and Commerce & Consumer Protection Committees,

This measure is extremely critical to the health of the children of our state and our entire state as well. **Please pass SB975** which would restrict online sales direct to consumers and require face-to-face purchases, making it harder for youth to obtain nicotine products on the internet.

I am Executive Director of the Hawaii COPD Coalition and serve over 45,000 Hawaii adults diagnosed with COPD in Hawaii (with an estimated equal number still undiagnosed). Chronic Obstructive Pulmonary Disease or COPD is an umbrella of diseases which include emphysema, chronic bronchitis and chronic asthma. Since 2007, I have worked in Hawaii, nationally and internationally with countless people who have had their lungs and lives horribly affected by tobacco and nicotine. Many of these people have become disabled and unable to perform jobs and hobbies they enjoyed, spending a lot more time and resources with healthcare providers and requiring support from society than they or any of us would like.

Sadly, our state is in the middle of a youth vaping epidemic! In Hawai'i one in three high school students and on in five middle school students reported "current use of e-cigarettes according to the Hawai'i YRBSS 2019! ESDs are now THE most popular tobacco/nicotine product among youth, largely because these products are NOT regulated (unlike regulations on other tobacco/nicotine products).

- E-cigarettes and electronic smoking devices (ESDs) have evaded many tobacco regulation laws for decades, leading to a sharp rise in the use of these products, especially by young people, who are enticed by their unregulated marketing and lack of proper regulatory controls on an addictive drug, nicotine.
- Comprehensive regulation will be a major step in reversing youth use of e-cigarettes.
- Two decades of comprehensive regulation of cigarettes and other tobacco products has helped Hawai'i save \$1B in healthcare costs.
- Comprehensive regulation has lowered the adult smoking rate to 11.6%; and
- Reduced high school smoking to 5.3% in 2019 (CDC YRBS 2017-2019).
- ***E-cigarettes are not FDA-approved cessation devices.***
- Comprehensive tobacco regulation does not stop access to FDA-approved nicotine replacement therapy (NRTs) – approved smoking cessation products.
- E-cigarettes are the only tobacco products without a tobacco tax.

- Unregulated, unchecked online sales of e-cigarettes need to be addressed. This measure restricts online sales of e-cigarettes directly to consumers – requiring face-to-face purchases makes it harder for youth to obtain these products via the internet. Licensed tobacco retailers would still be able to receive shipments of products.
- Taxation, regulation, licensing & permitting, education, and cessation services are components of comprehensive tobacco regulation and a key to lowering the use of tobacco use.

Please help protect the lungs and lives of our children from these very harmful products that are spreading virally in our communities and schools, from elementary through high school and beyond. We urge you to please **pass SB975 out of committee so our keiki and community will be protected from ESDs and predatory online sales that is so prevalent.** The Hawaii COPD Coalition thanks you very much for your careful consideration of this most important and timely bill.

Very truly yours,

Valerie Chang

House Committee on Health and Human Services

Re: SB975, relating to health
9:30 a.m., Feb. 15, 2023

Aloha Chair San Buenaventura, Vice Chair Aquino and committee members:

On behalf of Hawai'i Children's Action Network (HCAN) Speaks!, mahalo for the opportunity to **testify in STRONG SUPPORT of Senate Bill 975**, relating to health.

We cannot let the epidemic that is youth vaping continue any longer. One in three high school students and one in five middle school students report "current use" of e-cigarettes. E-cigarettes are now the most popular tobacco product among youth. That's largely because these products are not subject to many of the regulations other tobacco products are subject to.

In addition to the harms e-cigarettes may have for adolescents and youths, they are also a risk to young children. **The CDC reports that approximately half of all calls to poison control centers for e-cigarettes are for children 5 years of age or younger.**

E-cigarettes have evaded many tobacco regulation laws for decades. Comprehensive regulation will be a major step in reversing youth use of e-cigarettes. We have spent the last few decades lowering cigarette use across the board. We know that comprehensive regulation is an essential component to that success. It's time we do the same for e-cigarettes.

Please support SB975. It creates necessary regulations on e-cigarettes in Hawai'i to keep them out of the hands of keiki of all ages.

Testimony by
Hawaii Nurses Association
February 15, 2023

The Hawaii Nurses Association -OPEIU Local 50 is affiliated with the AFL-CIO and was founded in 1917 and represents 4,000 nurses in the State of Hawai'i. We are grateful to testify in **SUPPORT of S.B. 975.**

- E-cigarettes have evaded many tobacco regulation laws for decades, leading to a sharp rise in the use of these products, especially by young people, who are enticed by their unregulated marketing and lack of proper regulatory controls on an addictive drug, nicotine.
- Comprehensive regulation will be a major step in reversing youth use of e-cigarettes.
- Two decades of comprehensive regulation of cigarettes and other tobacco products has helped Hawai'i save \$1B in healthcare costs.
- Comprehensive regulation has lowered the adult smoking rate to 11.6%; and
- Reduced high school smoking to 5.3% in 2019 (CDC YRBS 2017-2019).
- E-cigarettes are not FDA-approved cessation devices.
- Comprehensive tobacco regulation does not stop access to FDA-approved nicotine replacement therapy (NRTs) – approved smoking cessation products.
- E-cigarettes are the only tobacco products without a tobacco tax.
- Unregulated, unchecked online sales of e-cigarettes need to be addressed. This measure restricts online sales of e-cigarettes directly to consumers – requiring face-to-face purchases makes it harder for youth to obtain these products via the internet. Licensed tobacco retailers would still be able to receive shipments of products.
- Taxation, regulation, licensing & permitting, education, and cessation services are components of comprehensive tobacco regulation and a key to lowering the use of tobacco use.

Thank you for your consideration and we urge you to vote in support of S. B. 975.

Respectfully,

Daniel Ross
President

**Testimony to the Senate Joint Committee on Health and Human Services, and
Commerce and Consumer Protection
Wednesday, February 15, 2023; 9:30 a.m.
State Capitol, Conference Room 229
Via Videoconference**

RE: SENATE BILL NO. 0975, RELATING TO HEALTH.

Chair San Buenaventura, Chair Keohokalole, and Members of the Joint Committee:

The Hawaii Primary Care Association (HPCA) is a 501(c)(3) organization established to advocate for, expand access to, and sustain high quality care through the statewide network of Community Health Centers throughout the State of Hawaii. The HPCA **SUPPORTS THE INTENT** of Senate Bill No. 0975, RELATING TO HEALTH.

By way of background, the HPCA represents Hawaii's Federally Qualified Health Centers (FQHCs). FQHCs provide desperately needed medical services at the frontlines to over 150,000 patients each year who live in rural and underserved communities. Long considered champions for creating a more sustainable, integrated, and wellness-oriented system of health, FQHCs provide a more efficient, more effective and more comprehensive system of healthcare.

The bill, as received by your Committee, would strengthen tobacco regulation throughout the State. Among other things, this bill would:

- (1) Make it unlawful to ship certain tobacco products into the State;
- (2) Levy the Cigarette and Tobacco Tax, Chapter 245, Hawaii Revised Statutes, on e-liquids and electronic smoking devices;
- (3) Establish new wholesale permit and retail license requirements on the sale of certain tobacco products; and
- (4) Increase various permit and licensure fees.

Testimony on Senate Bill No. 0975
Wednesday, February 15, 2023; 9:30 a.m.
Page 2

FQHCs have long seen first-hand how tobacco has literally destroyed the lives of our patients and their families. Because of the ubiquity of cigarettes, chewing tobacco, and now electronic smoking devices, the impacts of tobacco harms our citizenry on a generational basis with people experimenting at even earlier ages. Because of this, the HPCA supports efforts that would create disincentives for consumers to use these products.

Accordingly, the HPCA urges your favorable consideration of this measure.

Thank you for the opportunity to testify. Should you have any questions, please do not hesitate to contact Public Affairs and Policy Director Erik K. Abe at 536-8442, or eabe@hawaiiipca.net.

Hawaii Dental Association

Committee: Senate Committee on Health and Human Services
Senate Committee on Commerce and Consumer Affairs
Time/Date: 9:30 a.m., February 15, 2023
Location: State Capitol Room 229 and via Videoconference
Re: SB 975, Relating to Health

Aloha Chair San Buenaventura, Chair Keohokalole, Vice Chair Aquino, Vice Chair Fukunaga, and members of the committees!

The Hawaii Dental Association (HDA) is a professional association comprised of approximately 950-member dentists. **We are in support of SB 975**, relating to health. This bill establishes the criminal offense of unlawful shipment of tobacco products and mends the definition of "tobacco products" under the Cigarette Tax and Tobacco Tax Law to include electronic smoking devices and e-liquids, among other provisions.

HDA expresses its opposition to use of oral tobacco, including vaping nicotine from e-cigarettes, and urges people using any type of tobacco product to quit. Tobacco use is causally associated with higher rates of tooth decay, receding gums, periodontal disease, mucosial lesions, bone damage, tooth loss, jawbone loss and more. That is why the Hawaii Dental Association, like the American Dental Association, is working with dentists, educators, public health officials, lawmakers, and the public to prevent and, hopefully, eliminate the use of all tobacco products. HDA supports regulatory and legislative action to ban the sale and distribution of all e-cigarette and vaping products, with the exception of those approved by the FDA for tobacco cessation purposes and made available by prescription only. We will continue to support legislation aimed at enhancing and promoting oral health.

HDA is a statewide membership organization representing dentists practicing in Hawaii and licensed by the State of Hawaii's Board of Dentistry. HDA members are committed to protecting the oral health and well-being of the people of Hawaii, from keiki to kupuna and everyone in between.

Mahalo for the opportunity to testify in support of SB 975.

Opportunity Youth Action Hawai'i

Committee: Senate Committee on Health and Human Services
Senate Committee on Commerce and Consumer Protection
Hearing Time: 9:30 a.m., February 15, 2023
Location: State Capitol
Re: SB 975, Relating to Health

Aloha e Chair San Buenaventura, Chair Keohokalole, Vice Chair Aquino, Vice Chair Fukunaga, and members of the Committees:

We are writing in **strong support** of SB 975, relating to health.

This bill establishes the criminal offense of unlawful shipment of tobacco products. It also amends the definition of "tobacco products" under the Cigarette Tax and Tobacco Tax Law to include electronic smoking devices and e-liquids. In addition, this bill increases the license fee for persons engaged as wholesalers or dealers of cigarettes and tobacco products and the retail tobacco permit fee for retailers engaged in the retail sale of cigarettes and tobacco products.

Research conducted by the American Heart Association has found that **Hawai'i has the highest rate of middle school-aged students' use of electronic smoking devices nationwide, and the second highest high school student usage rate.** Further research from Living Healthy Hawai'i shows that youth who use e-cigarettes are four times more likely to try regular cigarettes, and three times more likely to become cigarette smokers. The Center for Disease Control (CDC) states that 99% of e-cigarettes sold in assessed venues contained nicotine, a substance which changes the way the brain develops, increases the risk of future addictions, and increases the risk of heart disease.

Opportunity Youth Action Hawai'i is a collaboration of organizations and individuals committed to reducing the harmful effects of a punitive incarceration system for youth; promoting equity in the justice system; and improving and increasing resources to address adolescent and young adult mental health needs. We seek to improve the continuity of programs and services for youth and young adults transitioning from minor to adult status; eliminate youth homelessness and housing market discrimination against young adults; and promote and fund more holistic and culturally-informed approaches among public/private agencies serving youth.

Please support SB 975.

February 12, 2023

Senate Committee on Commerce and Consumer Protection

Re: Testimony in Support of SB975, Relating to Health

Hrg: 15 Feb 2023, 9:30 AM, Conference room 229 & Videoconference

The Hawai'i Public Health Association (HPHA) is a group of over 450 community members, public health professionals, and organizations statewide dedicated to improving public health. Our mission is to promote public health in Hawai'i through leadership, collaboration, education and advocacy. Additionally, HPHA aims to call attention to issues around social justice and equity in areas that extend beyond the traditional context of health (e.g., education, digital equity, cultural sensitivity), which can have profound impacts on health equity and well-being. Therefore, as stewards of public health, HPHA is also advocating for equity in all policies.

We strongly support, SB975, a comprehensive tobacco regulation bill that: establishes the criminal offense of unlawful shipment of tobacco products; amends the definition of tobacco products under Tobacco Tax Laws to include electronic smoking devices and e-liquids; and addresses licensing and permitting sellers.

E-cigarettes have evaded many tobacco regulation laws for decades, leading to a sharp rise in the use of these products, especially by young people who are enticed by their unregulated marketing and lack of proper regulatory controls on an addictive drug, nicotine. E-cigarettes are the only tobacco product without a tobacco tax. Comprehensive regulation over e-cigarettes will be a major step to reduce the use of e-cigarettes among youth.

Tobacco regulation laws have already proven to be effective in Hawai'i. Comprehensive regulation has lowered adult smoking rate to 11.6%, and reduced high school smoking to 5.3% in 2019 (CDC YRBS 2017-2019). Two decades of comprehensive regulation of cigarettes and other tobacco products have helped Hawai'i save \$1 billion in healthcare costs.

This measure also restricts online sale of e-cigarettes directly to consumers. Requiring face-to-face purchases makes it harder for youth to obtain these products via the internet. Licensed tobacco retailers would still be able to receive shipments of products.

Lastly, it is important to call attention to the fact that the FDA does not approve e-cigarettes as cessation devices and that this comprehensive regulation will not stop access to FDA-approved nicotine replacement therapy (NRTs).

We **strongly support SB975** and respectfully ask that you pass this measure to ensure that Hawai'i has all the components of comprehensive tobacco regulation necessary to lower the use of tobacco. Thank you for the opportunity to provide testimony on this important public health topic that impact the health of our communities.

Respectfully submitted,

Holly Kessler
Executive Director

SB-975

The Coalition for a Tobacco-Free Hawaii's Youth Council, **strongly supports SB975**, regulating e-cigarettes the same as other tobacco products.

Today, Hawai'i is facing a youth vaping epidemic. In 2019, the most recent data from Hawai'i available, one in three high school students and one in five middle school students report "current use" of e-cigarettes. As many know, these products are harmful to youth in particular, containing toxic chemicals like nicotine and formaldehyde that destroy the developing brain. 1,400 people die from a tobacco-related illness every year in Hawai'i and e-cigarettes are addicting a whole new generation.

Countless students from across the state and nation have chronicled youths experiences with e-cigarettes – whether watching their friends fall victim to the predatory marketing of the industry, seeing their school bathrooms cloud with smoke, or even reporting the struggle of recovering from nicotine addiction themselves. Students today are under siege by an industry that profits off of addiction.

A study by Frank J. Chaloupka, PhD Director of the Health Policy Center at the University of Illinois at Chicago showed that **a 10% increase in price reduces sales of disposable e-cigarettes by approximately 12%**, and by about 19% for reusable e-cigarettes. Youth are even more price sensitive than adults, which is why the Youth Council supports taxing e-cigarettes like other tobacco products.

It's not just youth that support this – we have endorsements from more than 100 organizations, many of which have also submitted testimony. Our members have presented to the majority of Oahu neighborhood boards, with 24 having passed resolutions in support of a comprehensive effort to end the youth vaping epidemic,

including regulating e-cigarettes the same as other tobacco products. Organizations like the Association of Hawaiian Civic Clubs, the Honolulu Youth Commission, Parents for Public Schools of Hawai'i, and many more are also calling for action. You can see a partial list below.

The only opposition to this bill seems to be the addicted or those profiting from their addiction. It's time to stand up to Big Tobacco!

Re: **Testimony in Support of SB 975, Relating to Health**

Date: Wednesday, February 15, 2023

Time: 9:30 A.M.

Place: Conference Room 229, State Capitol and Videoconference

The Hawai'i Community Foundation (HCF) strongly supports SB 975. HCF administers the Hawai'i Tobacco Prevention and Control Trust Fund. Through the Trust Fund, we have funded a variety of community grants and contracts to support tobacco prevention and control activities statewide for over 20 years. Our goal is to help improve the health and well-being of Hawaii's people by reducing death and disease caused by tobacco consumption. By managing statewide community grant programs in tobacco cessation and youth prevention for many years, HCF has gained substantial knowledge about what it takes at the grassroots level to reduce tobacco consumption in our communities.

Nearly all commercially available electronic smoking devices (ESDs) and e-liquids contain nicotine derived from tobacco, yet they are the only tobacco products in Hawaii's market that are not regulated or subject to tobacco taxes under state law. It is entirely appropriate, and overdue, to regulate and tax ESDs and e-liquids on the same basis as other tobacco products.

The easy statewide availability of unregulated ESDs to our keiki and the resulting epidemic of ESD use among middle and high school students is creating a new generation dependent on nicotine, with long-term adverse health consequences to our state. Nicotine is a highly addictive

substance that can cause long-term damage to the developing adolescent brain, affecting attention, learning, mood, and impulse control.¹

Many of our tobacco cessation program grantees across the islands have learned from their patients and community partners that online sales are a major source of ESDs and e-liquids for youth or their suppliers, despite Hawaii's Age 21 law. Unlike cigarettes and other traditional tobacco products that are illegal to sell online, currently there are few barriers for online sales of ESDs and e-liquids to adults or youth. The regulatory framework in SB 975 will help to close this very large loophole and reduce youth access to ESDs and e-liquids.

Increasing price of tobacco products through taxation is a proven evidence-based method to reduce tobacco consumption. Youth buying and consumption patterns are particularly sensitive to price increases. Increasing the price of ESDs and e-liquids through taxation that is comparable to taxes on other tobacco products will greatly assist statewide efforts by HCF and many others to reduce the epidemic-level usage of ESDs by youth throughout our state.

TESTIMONY ON THE FOLLOWING MEASURE:

S.B. No. 975, Relating to Health

BEFORE THE:

Senate Committee on Health and Human Services
Senate Committee on Commerce and Consumer Protection

DATE: Wednesday, February 15, 2023

TIME: 9:30 a.m.

LOCATION: State Capitol, Room 229

Chairs San Buenaventura and Keohokalole, Vice-Chairs Aquino and Fukunaga, and Members of the Committees:

The Department of Taxation ("Department") offers the following comments regarding S.B. 975 for your consideration.

S.B. 975 seeks to amend chapter 245, Hawaii Revised Statutes (HRS), by: (1) adding a new section which establishes the offense of unlawful shipment of tobacco products as either a felony or misdemeanor depending upon the value of the shipment; (2) amending section 245-1, HRS, to expand the definition of "tobacco products" and adding definitions for "electronic smoking devices" and "e-liquid;" (3) amending sections 245-2 and 245-2.5, HRS, to increase the fee for tobacco and cigarette wholesaler or dealer licensing from \$2.50 to \$250, and the fee for retail tobacco permits from \$20 to \$50, while also adding a requirement for licensees to specify whether each place of business sells e-liquid or electronic smoking devices, or both; (4) repealing chapter 28, Part XII, HRS, which administers the Electronic Smoking Device Retailer Registration Unit; (5) repealing section 245-17, HRS, "Delivery Sales" to conform with the new section making tobacco shipment unlawful; and (6) repealing section 328J-11.5, HRS, "Statewide concern," to allow the counties to further regulate the sale of cigarettes, tobacco products, and electronic smoking devices.

The Department is able to implement the measure as it is written with its current effective date of January 1, 2024. The Department will need to update any relevant instructions to reflect the added penalties for the unlawful shipment of tobacco.

Thank you for the opportunity to provide comments on this measure.

**Testimony before the Hawaii Senate Committees on Health & Human Services
and Consumer Protection & Commerce
Regarding Banning the Sale of Flavored Tobacco and Vapor Products
Lindsey Stroud, Director, Consumer Center
Taxpayers Protection Alliance
February 15, 2023**

Chairmen Buenaventura and Keohokalole, Vice Chairs, and Members of the Committee:

Thank you for your time today to discuss imposing an excise tax on electronic cigarettes or vapor products in Hawaii. My name is Lindsey Stroud and I'm Director of the Consumer Center at the Taxpayers Protection Alliance (TPA). TPA is a non-profit, non-partisan organization dedicated to educating the public through the research, analysis and dissemination of information on the government's effects on the economy. TPA's Consumer Center focuses on providing up-to-date information on adult access to goods including alcohol, tobacco and vapor products, as well as regulatory policies that affect adult access to other consumer products, including harm reduction, technology, innovation, antitrust and privacy.

While addressing youth use of age-restricted products is laudable, lawmakers must refrain from imposing excise taxes on alternatives to the most dangerous form of tobacco, combustible cigarettes. E-cigarettes are significantly less harmful and their use should be encouraged, not taxed. An excise tax will only deter their use among adults who are unable and/or unwilling to quit smoking.

Key Points

- Youth vaping has decreased by 53 percent between 2019 and 2022, while youth use of traditional tobacco products is at record lows.
- In 2022, among middle and high school students that had used a tobacco or vape product on at least one occasion in the 30 days prior, 9.4 percent reported using e-cigarettes, 1.9 percent had used cigars, 1.6 percent has used combustible cigarettes and 1.3 percent had used smokeless tobacco products.
- Taxes on vapor products disproportionately harm lower income persons.
- Among adults earning \$15,000 or less, 7.9 percent reported current e-cigarette use in 2021, compared to 4.8 percent who reported earning \$50,000 or more.
- The introduction of e-cigarettes has not led to increases in cigarette smoking, but rather, correlates with significant declines in smoking rates among young adults.
- Between 2007 and 2018, smoking rates among Hawaii adults aged 18 to 24 years old declined by 39.6 percent. Since 2018, young adult smoking rates have decreased another 47.3 percent, with average annual declines of 16.8 percent.

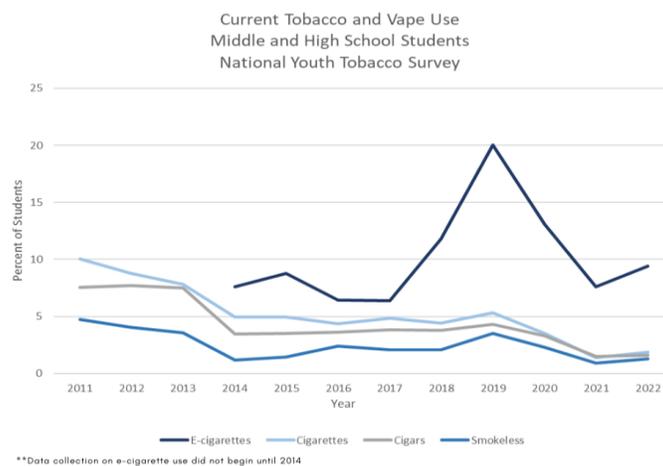

- Hawaii woefully underfunds programs to prevent youth use of tobacco and/or vapor products and help adults quit smoking, while simultaneously receiving millions of dollars from the pockets of the adults who do smoke. In 2021, for every \$1 the state received in tobacco monies, it spent only \$0.06 on tobacco control efforts.

Youth Tobacco and Vapor Product Use

Despite headlines, youth use of traditional tobacco products is at record lows. While youth e-cigarette use peaked in 2019, it has steadily declined in the years since.

In 2022, according to the National Youth Tobacco Survey (NYTS), among middle and high school students that had reported current tobacco product use (defined as having used the product on at least one occasion in the 30 days prior), 1.9 percent had used cigars, 1.6 percent had used combustible cigarettes and 1.3 percent had used smokeless tobacco products.¹ These are some of the lowest levels recorded. In fact, in the 10 years between 2012 and 2022, current cigar use declined by 75.3 percent, cigarette use by 81.7 percent and smokeless tobacco use by 67.9 percent. These declines have come all the while flavored tobacco and vapor products remain available for sale.

Regarding vaping use (according to the NYTS), vaping seems to have peaked in 2019 when 20 percent of middle and high school students had used an e-cigarette in the 30 days prior to the survey. In 2022, only 9.4 percent of U.S. youth were currently vaping, a 53 percent decrease from 2019's levels.

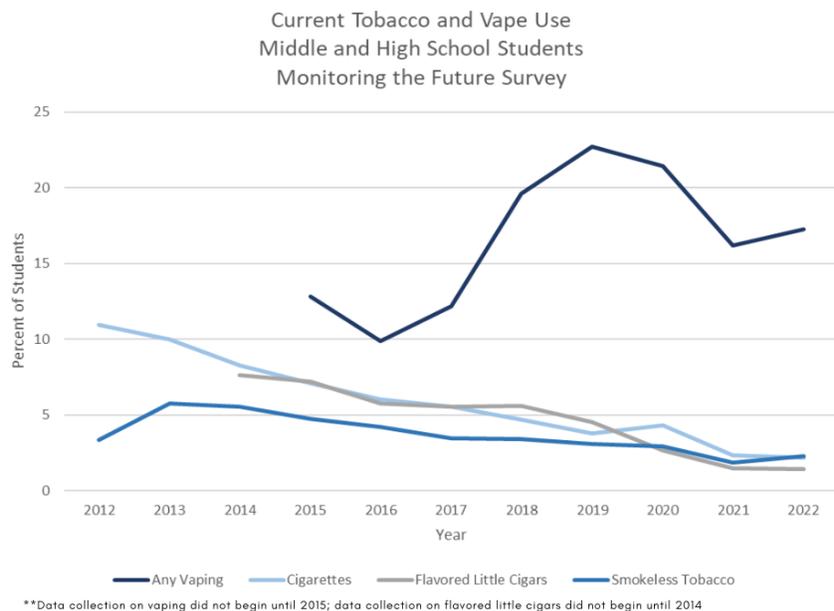

Other national survey data has found significant declines in youth use of tobacco and vapor products. In 2022, according to the Monitoring the Future Survey (MTFS), among middle and high school students, 2.3 percent reported currently using smokeless tobacco, 2.2 percent reported current combustible cigarette use, and 1.4 percent reported using flavored little cigars.² Again, these are some of the lowest levels recorded. In 2012, more than one in ten U.S. youth

**Taxpayers Protection Alliance, 1101 14th St. NW, Ste 1101, Washington, D.C. 20005
(202) 930-1716, www.protectingtaxpayers.org**

(11 percent) reported current cigarette use. In ten years, smoking rates among U.S. youth declined by 78.7 percent. During the same period smokeless tobacco use among youth decreased by 59.6 percent. Between 2014 and 2022, the percent of youth reporting current use of flavored cigars declined by 81.2 percent.

Similar to the NYTS, the MTFS also found that youth vaping peaked in 2019, when 22.7 percent of U.S. youth reported “any vaping” – i.e., using a vapor product to vape either nicotine or other substances. Between 2019 and 2022, the percent of youths reporting any vaping decreased by 23.9 percent.

The CDC continues to delay publishing state-specific data from the 2021 Youth Risk Behavior Survey. However, only 18 percent of high school students reported using vapor products in the 30 days prior to the survey in 2021. This is a 45 percent decrease from 2019 when 32.7 percent of high schoolers reported current vapor product use.

As the YRBS is an aggregate of all state data, Hawaiian lawmakers should refrain from excessive taxes to address outdated figures on youth vapor product use in the state.

Adult Tobacco and Vape Use

In 2021, 10.1 percent of adults in Hawaii were currently using cigarettes.³ Smoking rates were highest among 45- to 64-year-old adults, with 12.1 percent reporting current use.

TAXPAYERS PROTECTION ALLIANCE

Among all adults earning \$25,000 annually or less in 2021, more than one fifth (21.2 percent) reported currently smoking, compared to only 7.3 percent of adults who earned \$50,000 or more per year.

The CDC provides data on adult e-cigarette use for only 2016, 2017, and 2021.

In 2021, among all Hawaii adults, 7.3 percent were currently using e-cigarettes. This is a 55.3 percent increase from 2017 when 4.7 percent of Hawaiian adults were current e-cigarette users.

In 2021, among all Hawaii adults, 24.5 percent of 18- to 24-year-olds, 11.2 percent of 25–44-year-olds, 2.4 percent of 55–64-year-olds, and 0.7 percent of adults aged 65 years or older were currently using e-cigarettes.

Among adults earning \$15,000 or less, 7.9 percent reported current e-cigarette use, compared to 4.8 percent who reported earning \$50,000 or more.

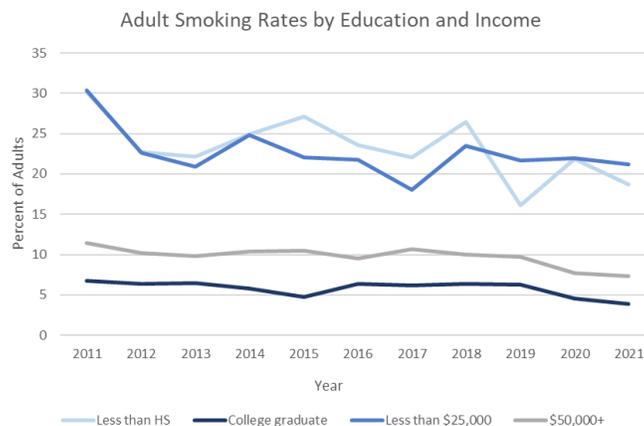

In Hawaii, 10.7 percent of Multiracial, non-Hispanic adults, 10.5 percent of Native Hawaiian and/or Pacific Islander adults, 10.2 percent of Hispanic adults, 7.4 percent of Black adults, 6.1 percent of White adults, and 5.1 percent of Asian adults were currently using e-cigarettes in 2021.

Effects Of Cigarette Taxes

Hawaii last increased its state cigarette excise tax in 2011 from \$3.00 to \$3.20-per-pack.

Lawmakers often justify excise taxes on cigarettes to deter persons from using combustible cigarettes, yet, such taxes disproportionately harm lower income, lower educated adults, as well as fail to significantly reduce smoking rates among those persons.

The number of percent of Hawaii adults earning \$25,000 or less that were smoking decreased by 30.3 percent between 2011 and 2021, while the percent of adults earning \$50,000 or more that were smoking decreased by 36 percent during the same period. Among Hawaiians who did not graduate high school, smoking rates decreased by 38.1 percent, yet rates among adults with a college degree decreased by 42.6 percent.

Lawmakers should refrain from enacting further increases in cigarette taxes given their disproportionate effect on low-income persons, while failing to reduce smoking rates.

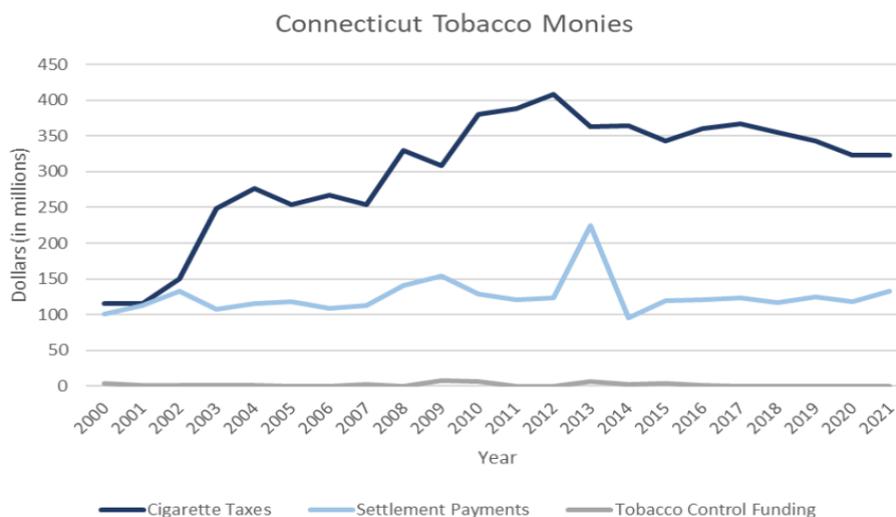

Tobacco Monies

Each year, states receive millions of dollars borne out of the lungs of persons who smoke. This revenue includes excise cigarette taxes and settlement payments. Yet, each year, states spend miniscule amounts of tobacco-related monies on programs to help adults quit smoking and prevent youth use.

In 2021, the Aloha State collected nearly \$98.1 million in state excise tax revenue from combustible cigarettes.⁴ This was a 4.2 percent decline from 2020’s \$102.4 million. Between 2001 and 2021, Hawaii collected more than \$2.1 billion in cigarette taxes.

Since 2000, Hawaii has collected annual payments from tobacco manufacturers based on the percentage of cigarettes and tobacco products sold in the state in that year. Hawaii collected \$37.5 million in settlement payments in 2021, a 6.2 percent increase from 2020’s \$35.3 million.⁵ Since 2000, the Aloha State collected nearly \$997 million in tobacco settlement payments.

While Hawaii collected an estimated \$135.6 million in tobacco-related monies in 2021, the state allocated only \$7.9 million in state funding towards tobacco control programs, including cessation, education, and youth prevention efforts, which was a 23.4 percent increase in funding from 2020 levels.⁶ This amounts to 8.1 percent of taxes and 21.1 percent of settlement payments. In 2021, for every \$1 the state received in tobacco monies, it spent only \$0.06 on tobacco control efforts.

Conclusion

Lawmakers must refrain from taxing products that are less harmful than combustible cigarettes and have actively contributed to significant declines in traditional tobacco smoking rates, especially among young adults. Given the significant reductions in youth use of e-cigarettes, as well as the record lows in use of traditional tobacco products, excise taxes on vapor products are not necessary. Rather, policymakers should use more of the already-existing monies derived from cigarettes to prevent youth use and help adults quit.

Tobacco & Vaping 101:

Hawaii 2023

Lawmakers are often bombarded with misinformation on the products used by adults in their state. This annual analysis provides up-to-date data on the adults who use cigarettes and e-cigarette products in Hawaii, youth use, impacts of e-cigarettes and analyses of existing tobacco monies.

Key Points:

- In 2021, 10.1 percent of adults were currently smoking in Hawaii. This is a 12.9 percent decrease from 2020.
- In 2021, among all Hawaii adults, 56.9 percent of 18- to 24-year-olds, 11.8 percent of 25–44-year-olds, 12.1 percent of 45–64-year-olds, and seven percent of adults aged 65 years or older were currently smoking combustible cigarettes.
- Among all adults earning \$25,000 or less in 2021, 21.2 percent were current smoking compared to only 7.3 percent of adults earning \$50,000 or more.
- Among all smoking adults in 2021 in Hawaii, 27.7 percent were Asian, 20.2 percent were Multiracial, 18.9 percent were White, non-Hispanic, 18.6 percent were Native Hawaiian and/or Pacific Islander, and 14.5 percent were Hispanic.
- Cigarette excise taxes in Hawaii disproportionately impact low-income persons, while failing to significantly reduce smoking rates among that class.
- The percentage of Hawaii adults earning \$25,000 or less that were smoking decreased by 30.3 percent between 2011 and 2021, while the percent of adults earning \$50,000 or more that were smoking decreased by 36 percent during the same period.
- Among Hawaiians who did not graduate high school, smoking rates decreased by 38.1 percent, yet rates among adults with a college degree decreased by 42.6 percent.
- In 2021, 6.1 percent of adults reported past-month e-cigarette use, which was a 27.1 percent increase from 2017.
- Youth vaping seems to have peaked in 2019, when 20 percent of youth reported current e-cigarette use. Between 2019 and 2022, current e-cigarette use declined by 53 percent.
- Traditional tobacco use among youth is at record lows. In 2022, only 1.9 percent of U.S. youth reported current cigar use, 1.6 percent reported current combustible cigarette use and 1.3 percent reported using smokeless tobacco products.
- The introduction of e-cigarettes has not led to increases in cigarette smoking, but rather, correlates with significant declines in smoking rates among young adults.
- Between 2007 and 2018, smoking rates among Hawaii adults aged 18 to 24 years old declined by 39.6 percent. Since 2018, young adult smoking rates have decreased another 47.3 percent, with average annual declines of 16.8 percent.
- Hawaii woefully underfunds programs to prevent youth use of tobacco and/or vapor products and help adults quit smoking, while simultaneously receiving millions of dollars from the pockets of the adults who smoke. In 2021, for every \$1 the state received in tobacco monies, it spent only \$0.06 on tobacco control efforts.

Tobacco & Vaping 101: Hawaii 2023

Adult Combustible Cigarette Use

In 2021, according to data from the annual Behavioral Risk Factor Surveillance System survey (BRFSS) conducted by the Centers for Disease Control and Prevention, 10.1 percent of Hawaiians were currently smoking, amounting to nearly 114,852 adults. This is a 12.9 percent decrease from 2020 when 11.6 percent reported current cigarette use. In 2021, 6.8 percent of Hawaiian adults reported smoking every day.

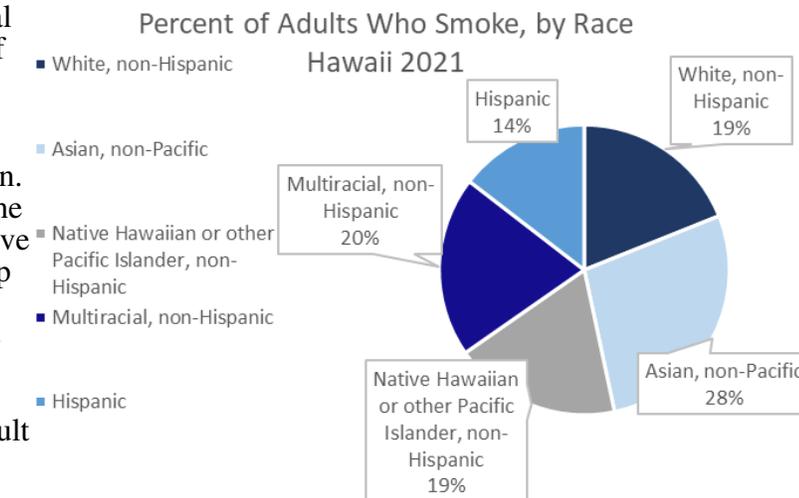

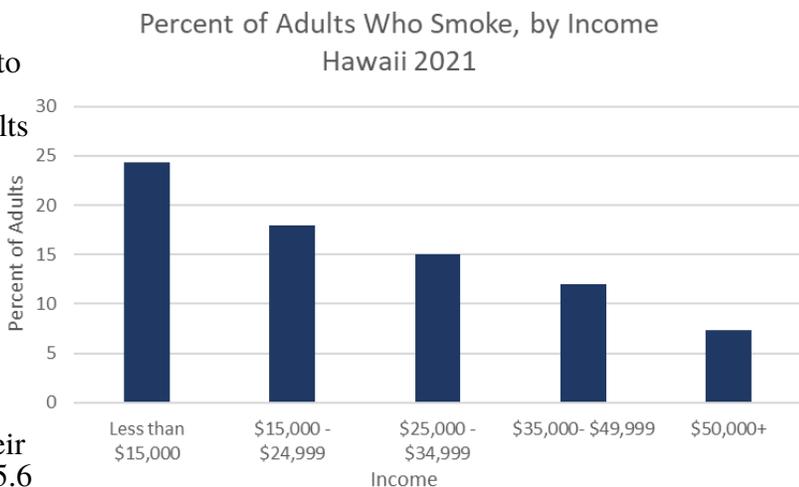

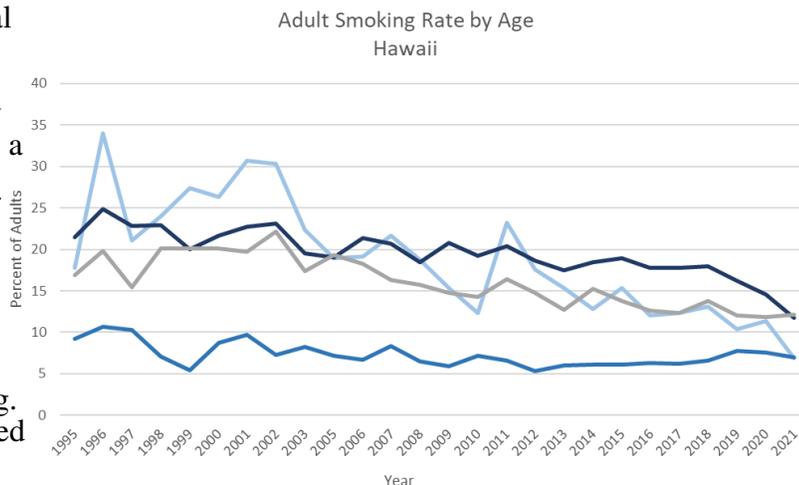

Smoking rates in the Aloha State have significantly declined since 1995 when the BRFSS Aloha began reporting combustible cigarette use. That year, 17.8 percent of Hawaii adults were then-currently smoking. Between 1995 and 2021, smoking rates have decreased by 43.3 percent with average annual decreases of 5.8 percent.

In 2021, among all Hawaii adults, 6.9 percent of 18- to 24-year-olds, 11.8 percent of 25–44-year-olds, 12.1 percent of 45–64-year-olds, and seven percent of adults aged 65 years or older were currently smoking combustible cigarettes.

Among all adults earning \$25,000 annually or less in 2021, more than one fifth (21.2 percent) reported currently smoking, compared to only 7.3 percent of adults who earned \$50,000 or more per year.

In Hawaii, Native Hawaiian and/or Pacific Islander adults reported smoking at a greater percentage of their identified race at 17.5 percent. This is compared to 15.6 percent of Hispanic adults, 13.2 percent of Multiracial adults, 7.8 percent of White adults, and 6.8 percent of Asian adults.

Yet, Asian adults made up a significantly larger percentage of Hawaii's total adult smoking population. In 2021, Asian adults accounted for 27.7 percent of the state's current smoking population, compared to Native Hawaiian and/or Pacific Islander adults, who made up 18.6 percent of the current adult smoking population. White adults accounted for 18.9 percent of the state's current adult smoking population, Multiracial, non-Hispanic adults accounted for 20.2 percent, and Hispanic adults made up 14.5 percent of Hawaii's adult smoking population in 2021.

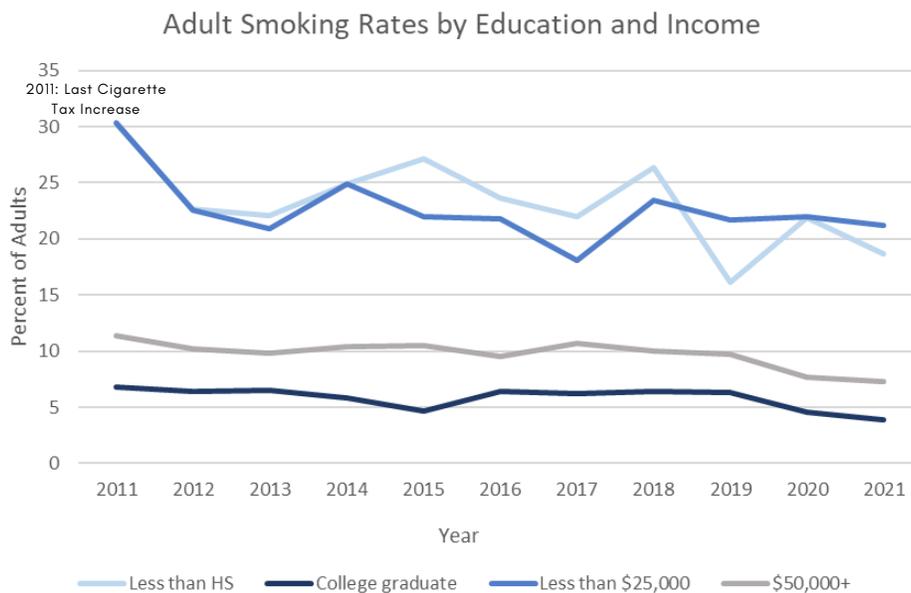

Tobacco & Vaping 101: Hawaii 2023

Effects of Cigarette Taxes

Hawaii last increased its state cigarette excise tax in 2011 from \$3.00 to \$3.20-per-pack. Lawmakers often justify excise taxes on cigarettes to deter persons from using combustible cigarettes, yet, such taxes disproportionately harm lower income, lower educated adults, as well as fail to significantly reduce smoking rates among those persons.

The number of percent of Hawaii adults earning \$25,000 or less that were smoking decreased by 30.3 percent between 2011 and 2021, while the percent of adults earning \$50,000 or more that were smoking decreased by 36 percent during the same period. Among Hawaiians who did not graduate high school, smoking rates decreased by 38.1 percent, yet rates among adults with a college degree decreased by 42.6 percent.

Lawmakers should refrain from enacting further increases in cigarette taxes given their disproportionate effect on low-income persons, while failing to reduce smoking rates.

Adult E-Cigarette Use

The CDC provides data on adult e-cigarette use for only 2016, 2017, and 2021.

In 2021, among all Hawaii adults, 7.3 percent were currently using e-cigarettes. This is a 55.3 percent increase from 2017 when 4.7 percent of Hawaiian adults were current e-cigarette users.

In 2021, among all Hawaii adults, 24.5 percent of 18- to 24-year-olds, 11.2 percent of 25–44-year-olds, 2.4 percent of 55–64-year-olds, and 0.7 percent of adults aged 65 years or older were currently using e-cigarettes. Among adults earning \$15,000 or less, 7.9 percent reported current e-cigarette use, compared to 4.8 percent who reported earning \$50,000 or more.

In Hawaii, 10.7 percent of Multiracial, non-Hispanic adults, 10.5 percent of Native Hawaiian and/or Pacific Islander adults, 10.2 percent of Hispanic adults, 7.4 percent of Black adults, 6.1 percent of White adults, and 5.1 percent of Asian adults were currently using e-cigarettes in 2021.

Tobacco & Vaping 101: Hawaii 2023

Youth Smoking and Vaping Rates

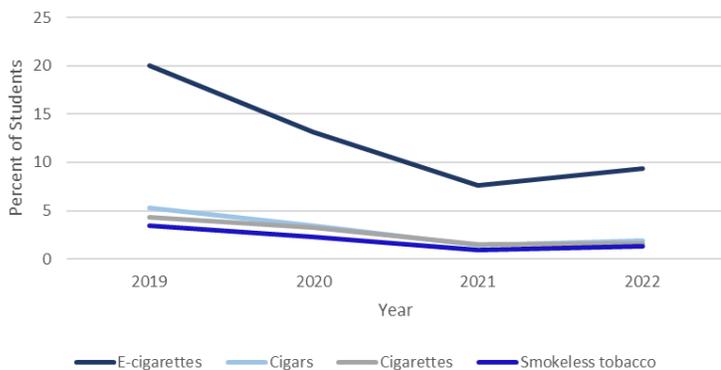

The CDC continues to delay publishing the 2021 results of the Youth Risk Behavior Survey resulting in state-specific data being unavailable at the time of this publication. Nonetheless, youth use of vapor products has declined significantly in recent years and youth use of traditional tobacco products is at record lows.

According to the National Youth Tobacco Survey, in 2022, only 9.4 percent of middle and high school students reported current use of e-cigarette products, defined as having used a product on at least one occasion in the 30 days prior to the survey. Youth vaping seems to have peaked in 2019, when 20 percent of youth reported current e-cigarette use. Between 2019 and 2022, current e-cigarette use declined by 53 percent.

Regarding traditional tobacco products, in 2022, only 1.9 percent of U.S. youth reported current cigar use, 1.6 percent reported current combustible cigarette use, and 1.3 percent reported using smokeless tobacco products. Between 2019 and 2022, current cigar use declined by 64.2 percent, current cigarette use decreased by 62.8 percent and smokeless tobacco use by 62.9 percent.

Given the record lows in youth tobacco use and continued declines in youth vapor product use, policymakers must refrain from prohibitionist policies that would hinder adult access to harm reduction products.

Youth Tobacco and Vape Use
U.S. Middle and High School Students

Young Adult Smoking Rates

As e-cigarettes have disrupted the traditional tobacco market, policymakers have shifted their attention towards youth use and subsequent smoking initiation. Despite the rhetoric, the introduction of e-cigarettes has not led to increases in young adult cigarette smoking, but rather, correlates with significant declines.

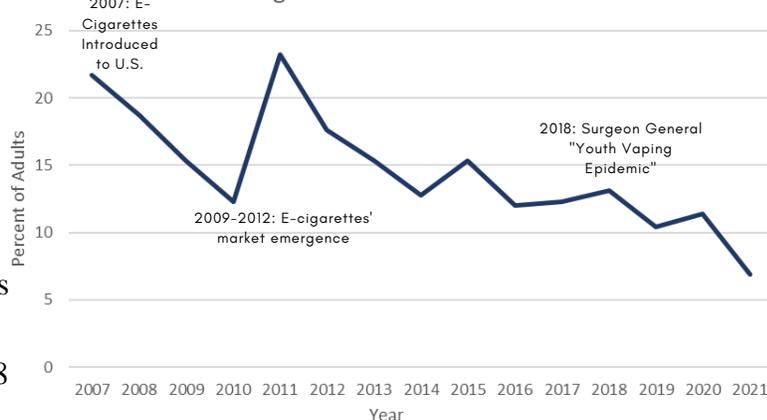

E-cigarettes first came to U.S. market in 2007, when 21.7 percent of Hawaiians aged 18 to 24 years old were currently smoking. In 2018, public health purported to a so-called “youth vaping epidemic,” when 13.1 percent of young adults in the Aloha State were smoking. Between 2007 and 2018, young adult smoking rates declined by 39.6 percent. Further, since 2018, young adult smoking rates have decreased another 47.3 percent, with average annual declines of 16.8 percent.

Though data is limited to only three years, increases in vaping correlate with decreases in smoking.

In 2017, (among 18- to 24-year-olds) 12.3 percent and 12.2 percent were currently using combustible cigarettes and e-cigarettes, respectively. Between 2017 and 2021, current cigarette use among young adults decreased by 43.9 percent while vapor product use increased by 100.8 percent.

Given the epic lows in young adult smoking rates, lawmakers must refrain from policies that restrict access to alternatives to smoking.

Current Smoking Rates Among Hawaii Adults
Aged 18 to 24 Years Old

Tobacco & Vaping 101: Hawaii 2023

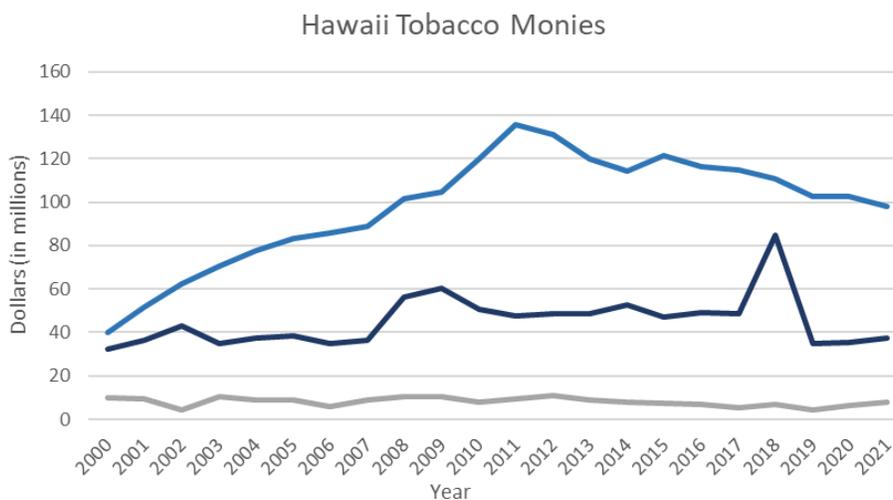

Tobacco Monies

Each year, states receive millions of dollars borne out of the lungs of persons who smoke. This revenue includes excise cigarette taxes and settlement payments. Yet, each year, states spend miniscule amounts of tobacco-related monies on programs to help adults quit smoking and prevent youth use.

In 2021, the Aloha State collected nearly \$98.1 million in state excise tax revenue from combustible cigarettes. This was a 4.2 percent decline from 2020's \$102.4 million. Between 2001 and 2021, Hawaii collected more than \$2.1 billion in cigarette taxes.

Since 2000, Hawaii has collected annual payments from tobacco manufacturers based on the percentage of cigarettes and tobacco products sold in the state in that year. Hawaii collected \$37.5 million in settlement payments in 2021, a 6.2 percent increase from 2020's \$35.3 million. Since 2000, the Aloha State collected nearly \$997 million in tobacco settlement payments.

While Hawaii collected an estimated \$135.6 million in tobacco-related monies in 2021, the state allocated only \$7.9 million in state funding towards tobacco control programs, including cessation, education, and youth prevention efforts, which was a 23.4 percent increase in funding from 2020 levels. This amounts to 8.1 percent of taxes and 21.1 percent of settlement payments. In 2021, for every \$1 the state received in tobacco monies, it spent only \$0.06 on tobacco control efforts.

Tobacco Harm Reduction 101

An estimated 30.8 million American adults smoked in 2020, or approximately 12.5 percent of the U.S. population.[1] Smoking-related disease and deaths cost the United States more than \$300 billion each year, including \$225 billion attributed to medical costs and more than \$156 billion due to lost productivity.[2]

For many years, policymakers have staunchly pushed forward with only one approach: quit or die. This failed method of smoking prevention and cessation has negligibly reduced smoking rates over the years. Yet, there is another approach: tobacco harm reduction for those who are unwilling or unable to quit smoking. In 1976, famed tobacco research Michael Russell remarked “people smoke for the nicotine, but die from the tar.”[3] Today, cigarettes contain nearly 600 ingredients and when ignited release more than 7,000 chemicals in the tobacco smoke, including 69 which are known to cause cancer.[4]

Nicotine, while not benign, is not responsible for causing cancer or the other ill effects caused by combustible cigarette smoke. In fact, the U.S. Food and Drug Administration,[5] the Centers for Disease Control and Prevention,[6] and the American Cancer Society[7] all acknowledge that nicotine has addictive properties but is not responsible for the harms caused by various tobacco products.

Given that nicotine itself is not the harm-causing property of tobacco, consumers and manufacturers have moved forward with giving adults the options to try and switch to less harmful tobacco products, otherwise known as tobacco harm reduction.

Tobacco harm reduction takes into account the science and the individual, all the while reducing the harms related to cigarette smoking. Rather than shaming persons addicted to nicotine, tobacco harm reduction offers them an opportunity to use a less harmful product, while delivering nicotine in a manner that is effective at reducing their cravings.

Reduced harm tobacco products include: electronic cigarettes/vaping devices, heated tobacco products, nicotine replacement therapy, and smokeless and snus products. These products deliver nicotine to adult consumers in a manner that is significantly less harmful than combustible cigarettes. Moreover, there is a plethora of evidence to their reduced risks.

- **E-Cigarettes:** Despite media alarmism, e-cigarettes are significantly less harmful than combustible cigarettes, as noted by numerous public health agencies. In 2015, Public Health England found e-cigarettes to be 95 percent less harmful than combustible cigarettes.[8] In 2021, the agency noted that “vaping is positively associated with quitting smoking successfully.”[9] In 2016, the UK Royal College of Physicians declared that e-cigarettes were unlikely to exceed five percent of the harms that are caused by smoking.[10] Not only does the UK government subsidize e-cigarettes as a cessation tool for people who smoke, vape shops can be found in hospitals in the country. In the United States, in 2018, of the estimated 10 million vapers, approximately 3 million had previously used combustible cigarettes.[11] In 2021, the FDA, through a new regulatory pathway, authorized the first e-cigarette product, finding that the product is “significantly less toxic than combusted cigarettes” and “could benefit addicted adult smokers who switch ... by reducing their exposure to harmful chemicals.”[12]
- **Heated Tobacco:** The US FDA has not only allowed for the marketing of a heated tobacco product, the manufacturer has been permitted to market it with a reduced risk claim, including that due to the product heating tobacco and not burning it, the process “significantly reduces the production of harmful and potentially harmful chemicals.”[13] While the rollout in America has been limited (and currently hindered by a patent dispute), in other countries, heated tobacco products have been linked to significant reductions in adult smoking rates. A 2020 study by the American Cancer Society remarked that heated tobacco products “likely reduced cigarette sales in Japan.”[14]

Tobacco Harm Reduction 101

- **Nicotine pouches:** Nicotine pouches are used the same way as snus but deliver nicotine via infused fillers like plant-based fibers instead of pasteurized tobacco. They are the newest innovation on the nicotine market and they are as or less harmful than snus. As a result, they have been rising in popularity across the world. For example, a May 2022 study assessed the potential effect of nicotine pouches if introduced in the U.S. in 2000. The study estimated there would have been about 700,000 fewer deaths by 2050.
- **Nicotine Replacement Therapy (NRT):** NRT is the most endorsed form of tobacco harm reduction and is subsidized by federal and state health care quit-smoking programs. NRT includes gums, patches, lozenges, and prescription medication. Studies have found that similar rates of cessation success among users of various NRT products and smokeless and snus products.[15] Other tobacco harm reduction products have been found to be more effective. For example, a 2019 randomized controlled trial found that e-cigarettes were almost twice as effective as NRT in aiding in smoking cessation.[16]
- **Smokeless:** Smokeless tobacco poses much lower risks than smoking, all while containing nicotine. A 2009 Biomed Central study analyzed 89 studies of smokeless tobacco use and cancer finding “very little evidence” of smokeless tobacco producing elevated cancer risks.[17] A 2011 review of epidemiologic studies found that snus and smokeless tobacco use to be “99% less hazardous than smoking.”[18]
- **Snus:** Snus is an oral moist tobacco often used in pouches. It originated in Sweden and has been part of the country’s “tobacco culture” for more than a century. Snus has been directly linked to reducing smoking rates in the country. Swedish men, who have the highest rate of smokeless tobacco use in Europe and the lowest smoking rate, “also have the lowest rates of lung cancer and other smoking-related diseases in Europe.”[19] Further, a 2020 long-term study of Swedish snus users that were former smokers concluded that over “80% found snus of great importance to succeed with smoking cessation.”[20]

As cigarettes remain available, it is imperative that policymakers offer the consumers access to less harmful tobacco products. Policymakers should avoid excessive regulations, unfair taxation, and outright prohibition when enacting policies regarding novel tobacco harm reduction innovations. Lawmakers should put forth policies that both inform consumers of the wide variety of less harmful products, as well as allow the market to introduce products that are effective at both delivering nicotine in a less harmful manner and reducing smoking rates.

Tobacco Harm Reduction 101

Tobacco Harm Reduction Products Can Help Adults Quit Smoking

Many opponents of tobacco harm reduction (THR) often claim there is no evidence that alternative nicotine/novel tobacco products including e-cigarettes, heated tobacco, and smokeless and snus tobacco products, are effective for smoking cessation. This misinformation deters many people who smoke from trying a reduced risk product.

Users Tend to Be Current and/or Former Smokers

Surveys in individual countries indicate an overwhelming majority of novel tobacco product users are current and former smokers. For example, the UK's Action on Smoking and Health (ASH) estimate that less than one percent of the country's current 3.6 million vapers are never-smokers.[1] A 2019 study in the *International Journal of Environmental Research and Public Health* found that among heated tobacco users in Japan, only one percent were never smokers.[2] Similarly, according to the Centers for Disease Control and Prevention (CDC), in 2018, current and ever e-cigarette use was highest among persons who had quit smoking and "lowest among those who never smoked cigarettes." [3]

Safer nicotine products are almost exclusively attractive to people who smoke and the motivation for trying them is to reduce harm from tobacco or quit entirely. According to the latest Global State of Tobacco Harm Reduction briefing, harm reduction options are already being used by an estimated 112 million people worldwide, with approximately 82 million using vaping products, 20 million using heated tobacco and 10 million using smokeless tobacco, nicotine pouches and snus.[4]

Research Indicates Effectiveness of Tobacco Harm Reduction Products

Data from national surveys find e-cigarettes to be effective in helping adults quit smoking.

In the UK it has been estimated by ASH that at least 2.3 million UK smokers have quit smoking completely with nicotine vaping devices.[5] According to the CDC, in the United States, 4.3 million US adult nicotine vapers are ex-smokers,[6] and the latest Eurobarometer survey found that 7.5 million EU citizens have quit smoking using a nicotine vaping product.[7]

Heated tobacco products have led to significant reduction in smoking rates. A 2020 study by the American Cancer Society remarked that heated tobacco products "likely reduced cigarette sales in Japan." [8] Another 2020 study published in the *International Journal of Environmental Research and Public Health* came to a similar conclusion, stating that "the accelerated decline in cigarette-only sales since 2016 corresponds to the introduction and growth in the sales of heated tobacco products." [9]

Snus has been directly linked to reducing smoking rates in Sweden, which has a seven percent smoking rate, the lowest in Europe. A 2020 long-term study of Swedish snus users that were former smokers concluded that more than "80% found snus of great importance to succeed with smoking cessation." [10] Furthermore, a joint Swedish and Australian study of more than 60,000 individuals found that "Snus has both contributed to decreasing initiation of smoking and ...appears to facilitate smoking cessation." [11]

A 2008 study in *Harm Reduction Journal* examining data from the 2000 National Health Interview Survey, found that men who had switched to smokeless tobacco in their most recent quit attempt "had the highest proportion of success among those attempting [to quit] smoking," and that switching to smokeless tobacco "compares very favorably with pharmaceutical nicotine as a quit-smoking aid among American men." [12]

Nicotine pouches are a more novel tobacco harm reduction product with research indicating that they can be useful in helping adults quit smoking. A May 2022 study assessed that if nicotine pouches had hypothetically been introduced into the US in 2000, there would have been about 700,000 fewer deaths by 2050.[13]

Tobacco Harm Reduction 101

FDA-Approved Cessation Products Have Limited Success

Unfortunately for many adults who continue to smoke, current FDA-approved cessation products have not been useful helping them quit, and some studies indicate novel tobacco harm reduction products are more effective.

A 2019 randomized trial published in *The New England Journal of Medicine* found e-cigarettes to be twice as effective as nicotine replacement therapy in helping adults quit smoking.[14] In 2021, the Cochrane Library living review of e-cigarettes found that “nicotine e-cigarettes help more people to stop smoking than nicotine replacement therapy.”[15]

Unfortunately, as of June 2022, the FDA erroneously claims that “there is not yet enough evidence to support claims that e-cigarettes... are effective tools for quitting smoking.”[16]

TAX FOUNDATION OF HAWAII

126 Queen Street, Suite 305

Honolulu, Hawaii 96813 Tel. 536-4587

SUBJECT: TOBACCO, Include Electronic Smoking Devices, Hike Fees

BILL NUMBER: SB 975, HB 833

INTRODUCED BY: SB by RHOADS, CHANG, KEOHOKALOLE, SHIMABUKURO, Awa, Elefante, Kidani; HB by KOBAYASHI, AMATO, CHUN, GANADEN, LOWEN, MARTEN, MATAYOSHI, POEPOE, TAM, TARNAS

EXECUTIVE SUMMARY: Establishes the criminal offense of unlawful shipment of tobacco products. Amends the definition of "tobacco products" under the Cigarette Tax and Tobacco Tax Law to include electronic smoking devices and e-liquids. Increases the license fee for persons engaged as wholesalers or dealers of cigarettes and tobacco products and the retail tobacco permit fee for retailers engaged in the retail sale of cigarettes and tobacco products. Repeals state laws that establish and govern the Electronic Smoking Device Retailer Registration Unit within the Department of the Attorney General; provisions of the Cigarette Tax and Tobacco Tax Law that govern delivery sales; and state law governing smoking that preempts and voids local ordinances and regulations conflicting with state law.

SYNOPSIS: Adds a new section to chapter 245, HRS, to establish the offense of unlawful shipment of tobacco products.

Amends section 245-1, HRS, to define "electronic smoking device" as any device that can be used to deliver aerosolized or vaporized nicotine to the person inhaling from the device, including but not limited to an e-cigarette, e-cigar, e-pipe, vape pen or e-hookah. "Electronic smoking device" includes any component, part, or accessory of the device, and any substance that may be aerosolized or vaporized by the device, whether or not the substance contains nicotine. "Electronic smoking device" does not include drugs, devices, or combination products authorized for sale by the U.S. Food and Drug Administration, as those terms are defined in the Federal Food, Drug, and Cosmetic Act [title 21 United States Code chapter 9].

Also amends the definition of "tobacco products" as (1) Any product containing, made of, or derived from tobacco or nicotine, other than cigarettes or little cigars, that is intended for human consumption or is likely to be consumed by inhalation, absorption, or any other means of ingestion, including large cigars and any substitutes thereof other than cigarettes that bear the semblance thereof, snuff, snus, chewing or smokeless tobacco, and smoking or pipe tobacco; (2) Any electronic smoking device as defined in this section and any substance, including e-liquids, that may be aerosolized or vaporized by the device, whether or not the substance contains nicotine; or (3) Any component, part, or accessory of any item described in paragraph (1) or (2), whether or not any of these contains tobacco or nicotine, including but not limited to filters, rolling papers, blunt or hemp wraps, hookahs, and pipes. "Tobacco products" does not mean drugs, devices, or combination products authorized for sale by the United States Food and Drug Administration, as those terms are defined in the Federal Food, Drug, and Cosmetic Act.

Amends section 245-2, HRS, to raise the annual fee for a tobacco license from \$2.50 to \$250.00.

Amends section 245-2.5, HRS, to raise the annual fee for a retail tobacco permit from \$20.00 to \$50.00.

Repeals part XII of chapter 28, HRS (sections 28-161 through 28-168), relating to Electronic Smoking Device Retailer Registration Unit.

Repeals section 245-17, HRS, relating to delivery sales.

Makes technical and conforming amendments.

EFFECTIVE DATE: January 1, 2024.

STAFF COMMENTS: The question that should be asked is the purpose of the tobacco tax. If the goal is to make people stop smoking by making it cost-prohibitive to smoke, then (a) it's working, as hikes in the cigarette tax have begun to exert downward pressure on collections not only locally but also nationally, but (b) it shouldn't be expected to raise revenue, because of (a). If the goal is really to stop the behavior, why are we not banning it?

As the Foundation's previous President, Lowell Kalapa, wrote in the Tax Foundation of Hawaii's weekly commentary on October 28, 2012:

Lawmakers seem to have a simplistic reaction to solving problems the solution to which plagues their constituents – tax it.

Probably the best example is what people like to call sin taxes, those excise taxes that are levied on tobacco and alcohol products. After all, smoking causes cancer and alcohol causes all sorts of problems including driving under the influence. Lawmakers and community advocates shake their heads and push for higher tax rates, arguing that making these products more expensive will deter folks from using these products.

The problem is that lawmakers also like the revenues that are generated from the sales of these products and, in some cases, they have tried to link the use and sale of these products with noble causes such as the funding of the Cancer Research Center that is currently being built. Again, the argument is that smokers should pay for programs and projects which seek to cure the related ill which in this case is cancer caused by smoking.

The irony is that arguments to increase the tax on tobacco and, more specifically, cigarettes, is a goal of getting smokers to quit while depending on the revenues from tobacco and cigarette taxes to fund an ongoing program, in this case the Cancer Research Center. So, which is it folks, stop smokers from smoking and if successful, there won't be any revenues to fund the Cancer Research Center?

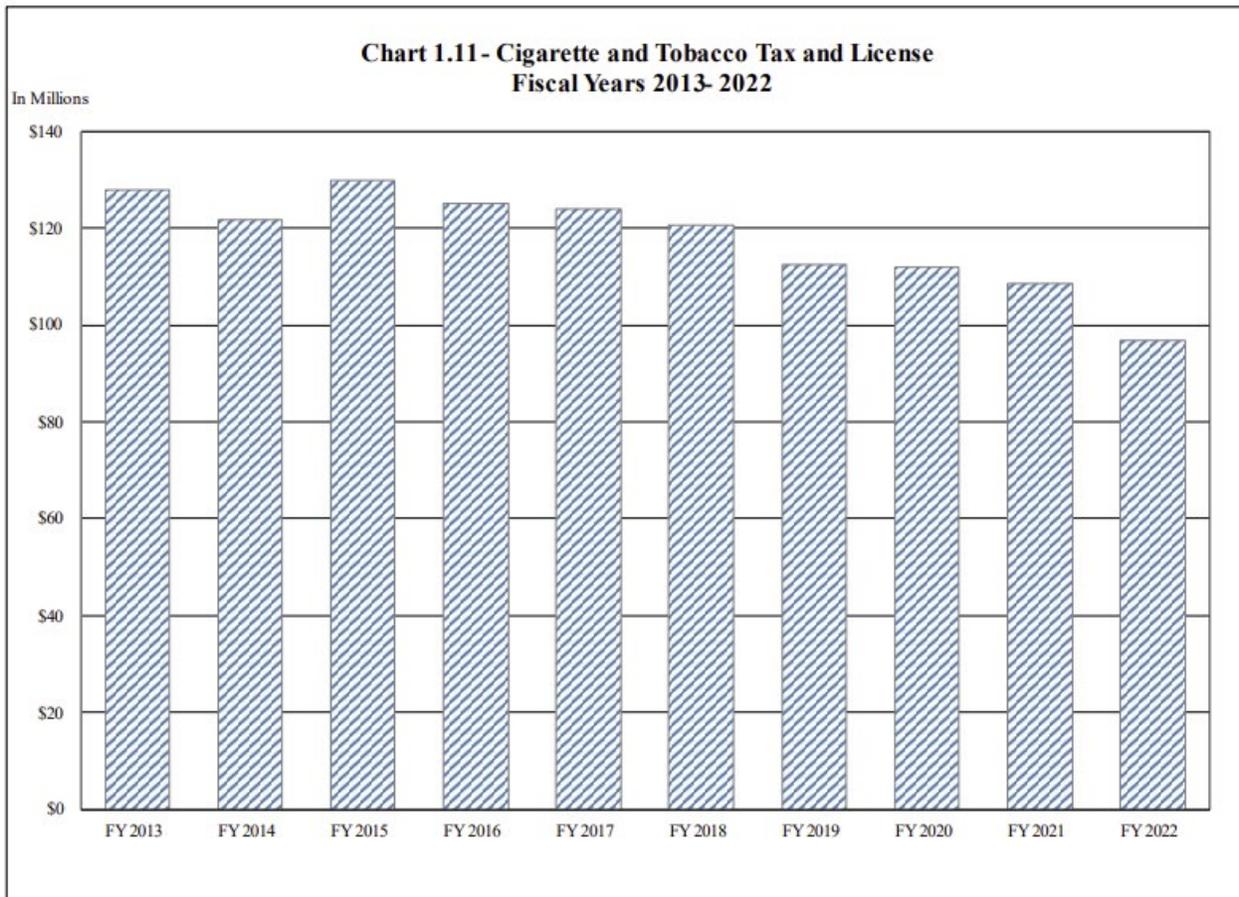

The fact of the matter is that it appears that both locally and nationally, higher taxes on cigarettes are influencing smokers as tax collections on the sale of cigarettes have fallen. Certainly some of the decline is due to smokers actually quitting, but to some degree one has to suspect that some purchases were made via mail order from exempt Indian

reservation outlets while others may be what is called gray market purchases, that is from sources outside the country.

What should come as a surprise is that most of the folks who have quit are of some means as they are more likely to recognize the health hazard caused by use of this product. That means most of those who are still smoking are among the lower-income members of our community. Thus, the tax is regressive, generating less and less collections from middle and higher-income individuals.

Kalapa, “Finding the Blame for What Ails You,” at <https://www.tfhawaii.org/wordpress/-blog/2012/10/finding-the-blame-for-what-ails-you/> (Oct, 28, 2012).

As predicted, programs that have been fed by earmarks from the tobacco tax, like the Cancer Research Center, have become a victim of the success of tobacco cessation programs and publicity. Revenues produced by the tobacco tax have been in steady decline over the past few years despite tax rate increases, and hoisting the smoking age to 21 in the 2015 session certainly didn’t reverse the trend.

Source: Department of Taxation Annual Report (2021-2022), page 23.

Fiscal reliance on funds from a sin tax is inadvisable, perhaps outright dangerous. If the goal is to affect social behavior, use of the tax law is not the most effective way to do so.

**Hawaii State Legislature
Senate Health & Commerce Committees
Testimony: S.B. 975
Guy Bentley, Director of Consumer Freedom, Reason Foundation
February 15, 2023**

Chair Buenaventura, members of the committee, thank you for the opportunity to submit testimony on S.B. 975.

My name is Guy Bentley, and I am the director of consumer freedom at the Reason Foundation, a 501(c)3 nonprofit think tank. Our team analyzes and promotes policy solutions that both improve public health and avoid unintended consequences while protecting consumer choice.

Taxing e-cigarettes and other reduced-risk nicotine products presents a very different policy challenge from that of taxing traditional cigarettes. Cigarette taxes are necessary to ensure smokers who may later contract smoking-related diseases do not impose additional healthcare costs on non-smokers. E-cigarettes, however, are a dramatically safer form of nicotine consumption.¹ Nicotine is one of the principal addictive agents in cigarettes but is not the cause of smoking-related disease, which stems from combustion and inhaling the resulting smoke. Since e-cigarettes do not involve combustion, they've been found to be substantially safer.

The Food and Drug Administration recognizes there is a “continuum of risk” concerning tobacco products, with cigarettes being the most dangerous and e-cigarettes being far less dangerous. Because e-cigarettes, snus, and heated tobacco products are safer than cigarettes, products in all three of these categories have been authorized for sale by the FDA as “appropriate for the protection of public health.” To qualify for FDA authorization, safer nicotine products like e-cigarettes must undergo extensive review and be deemed a net benefit to public health for both users and non-users of the products. Several of these products have also been granted modified risk marketing orders, which allow the manufacturer to inform smokers they will reduce their risk of smoking-related diseases if they switch to these products.

¹ Kings College London. “Vaping substantially less harmful than smoking, largest review of its kind.” September 29 2022.
<https://www.kcl.ac.uk/news/vaping-substantially-less-harmful-than-smoking-largest-review-of-its-kind-finds>

According to modeling conducted by David Levy and colleagues at Georgetown University Medical Center, replacement of cigarette use by e-cigarette use over ten years would yield 6.6 million fewer premature deaths with 86.7 million fewer life years lost nationwide.²

Research published in the *New England Journal of Medicine* (NEJM) shows e-cigarettes to be almost twice as effective as nicotine replacement therapies at helping smokers quit.³ The Cochrane Review, considered the gold standard of international evidence-based medicine, finds that e-cigarettes are substantially more effective at helping people stop smoking than nicotine replacement therapies.⁴

Since noncombustible nicotine products, like e-cigarettes and other reduced-risk products, present significantly less danger to consumers and offer a net benefit to public health if smokers switch from cigarettes, sound public policy dictates that these products should be taxed at a significantly lower rate than cigarettes, if at all.

According to research from Georgia State University Professor Michael Pesko, taxing e-cigarettes at equivalent rates to cigarettes on the national level results in fewer adult e-cigarette users and an increase of 2.5 million more smokers than there would be otherwise. Taxing less harmful products at levels similar to the more harmful products provides a clear disincentive for smokers to switch, thus resulting in net harm to public health.

Half to three-quarters of American smokers are from low-income communities, so any price increase will necessarily present a more significant barrier to poorer smokers looking to switch to vaping than those on higher incomes. Vapers who use the products to replace traditional cigarettes are highly sensitive to price changes. According to a working paper published by the National Bureau of Economic Research, the price elasticity for e-cigarettes is -1.3 , so for every 10 percent increase in the price of e-cigarettes, sales fall by 13 percent.⁵ By contrast, cigarettes

² Levy DT, Borland R, Lindblom EN, et al. "Potential deaths averted in USA by replacing cigarettes with e-cigarettes." *Tobacco Control* 2018;27:18-25. <https://tobaccocontrol.bmj.com/content/27/1/18>

³ Hajek, Peter et al. "A Randomized Trial of E-Cigarettes versus Nicotine-Replacement Therapy." *New England Journal of Medicine*. 2019; 380:629-637 <https://www.nejm.org/doi/full/10.1056/NEJMoa1808779>

⁴ Cochrane Review. "Electronic cigarettes for smoking cessation." November 2022. <https://www.cochrane.org/news/updated-cochrane-review-shows-electronic-cigarettes-can-help-people-quit-smoking>

⁵ Cotti, Chad D and Courtemanche, Charles J and Maclean, Johanna Catherine and Nesson, Erik T and Pesko, Michael F and Tefft, Nathan. "The Effects of E-Cigarette Taxes on E-Cigarette Prices and Tobacco Product Sales: Evidence from Retail Panel Data." *National Bureau of Economic Research*. August 2020. <https://www.nber.org/papers/w26724>

are highly inelastic, ranging from -0.3 and -0.7 , so for every 10 percent increase in the price of cigarettes, sales decline between three and seven percent.

If public health promotion is the priority, it would be necessary to maintain as broad a differential as possible between risk-reducing products like e-cigarettes and combustible cigarettes. While raising e-cigarette taxes may appear an attractive solution to the problem of youth vaping, policymakers should recognize that, according to the 2022 National Youth Tobacco Survey (NYTS), 86 percent of high schoolers are not using e-cigarettes at all, and 98 percent are not smoking combustible cigarettes. These numbers represent a decline of nearly 60 percent in the number of youth vaping since 2019.

There is strong reason to believe youth e-cigarette use can be reduced with alternative public health strategies that will not deter adult smokers from switching to a safer nicotine product.

Thank you again for the opportunity to comment on S.B. 975, and please do not hesitate to reach out if we can provide additional information or insights on this subject.

FROM: Cigar Association of America, Inc.
(William Goo)

RE: **SB 975** - Relating to Health
Hearing Date: February 15, 2023
Time: 9:30 am

My name is William Goo. I represent the Cigar Association of America, Inc. ("CAA"). CAA **opposes SB 975** which seeks in part to make criminal the shipment of tobacco products unless it is to a licensee.

CAA is the leading national trade organization representing the interests of cigar manufacturers, importers, distributors and major suppliers of the industry. CAA is concerned over the expansive efforts in SB 975 to criminalize the shipment of tobacco products to consumers. CAA's members include the largest internet retailers of premium cigars and pipe tobacco. These companies have been in business for decades and, as responsible retailers, comply fully with all federal, state and local laws. They all use sophisticated, third-party software to perform age verification on every consumer sale, ensuring no sales are made to those not old enough to purchase tobacco products. Nearly all of the companies imposed a minimum age of purchase of 21 long before it was federal law. The average age of a customer purchasing premium cigars on these websites in 2017 was 55, and 89% of the consumers were above the age of 35.¹

While the preamble to SB 975 recites many facts and issues relating to youth usage of e-cigarettes in Hawaii, there is no mention of youth usage of cigars. This is because, while there is always continued room for improvement, current high school usage of cigars in

¹Econsult Solutions, Inc., "PURCHASING PATTERNS AND DEMOGRAPHICS OF ONLINE PREMIUM CIGAR CUSTOMERS" July 2018. (on file with author)

Hawaii is at its lowest level ever measured – 2.8% when it was last measured in 2019.² This is opposed to 33.1% of Hawaii high school students who reported currently using e-cigarettes in 2019.³

For these and other reasons, Federal law continues to allow internet sales of cigars and pipe tobacco as opposed to other tobacco products. At the time of both the 2010 passage of the original Federal Prevent All Cigarette Trafficking Act (PACT Act) and the 2021 amendment to include e-cigarettes were passed, Congress recognized that cigars and pipe tobacco were used differently than cigarettes, smokeless tobacco, and e-cigarettes and both times made an informed decision **not** to include these products in the restrictions of the PACT Act. This allows cigars and pipe tobacco to continue to be shipped to adult consumers using the US Postal Service. In fact, cigars and pipe tobacco are the only tobacco products that can legally be shipped to adult consumers.

While SB 975 has the laudable goal of addressing youth usage of e-cigarettes, it has the unnecessary consequence of restricting the online sale of cigars and pipe tobacco – products the Federal government recognizes present vastly different consumer profiles. Rather than include cigars and pipe tobacco in a bill making all shipments to unlicensed persons unlawful, it is proposed that the Hawaii legislature and Department of Taxation instead work with CAA – as numerous other states are – to create a path to compliance for online cigar retailers to collect and remit the tobacco excise tax in Hawaii on direct sales to consumers. This will allow adult Hawaii residents to continue to purchase the products they enjoy – and will give Hawaii the tools it does not currently have to collect this tax on retail transactions.

CAA has, in conjunction with the Premium Cigar Coalition (a trade group made up of the seven largest online retailers of premium cigars), been working with the Federation of Tax Administrators Uniformity Committee to craft Model Legislation to address this situation. The Model Legislation has been successfully enacted in Maryland, Michigan, North Carolina, Indiana, and Virginia and is being considered by other state legislatures this session. The Model Legislation does the following:

- Establishes the scope of the bill in terms of its application to a finite set of products (cigars and pipe tobacco) in remote retail sales.
- Extends the application of the Hawaii cigar and pipe tobacco excise tax to transactions between a remote retail seller and consumer within Hawaii.
- Establishes clarity in defining the tax base on which the Hawaii cigar and pipe tobacco excise tax is calculated in remote retail sales.
- Establishes the responsibility and means for a remote retail seller to collect cigar

²Hawaii Youth Tobacco Survey https://hhdw.org/report/query/result/yts/CurrCigar/HS_ST.html

³ https://hhdw.org/report/query/result/yts/CurrCigar/HS_ST.html

and pipe tobacco excise taxes from a consumer and remit the tax to Hawaii on all remote retail sales to Hawaii ship-to addresses.

- Establishes procedures to collect the Hawaii cigar and pipe tobacco excise tax on all remote transactions regardless of the origin (inside or outside the state) of the source.
- Establishes a clear path to cigar and pipe tobacco excise tax compliance in Hawaii through licensure for remote sellers making remote retail sales in interstate and intrastate commerce.

Instead of criminalizing the shipment of cigars and pipe tobacco to adult consumers, CAA submits that a better and more prudent approach would be for CAA to engage in dialogue with the Department of Taxation to create a workable procedure for this tax revenue to be collected.

Thank you for considering this testimony.

To: Members of the Hawaii Senate Health & Human Services Committee
From: Americans for Tax Reform

Dear Senator,

On behalf of Americans for Tax Reform (ATR), a non-profit organization which advocates in the interests of taxpayers and consumers throughout the United States, **I urge you to reject SB 975, legislation that would allow local governments to regulate tobacco products and reduced-risk alternatives at severe detriment to the state.**

It is simply good governance that matters of this magnitude be decided at the state level, due to both the level of increased scrutiny, transparency and accountability it provides, but also the direct impact local regulation of tobacco can have on state tax revenue. Retaining regulatory consistency and uniformity throughout the state in terms of tobacco policy will safeguard residents and businesses from poorly thought-out local restrictions and will protect the state's revenue stream in uncertain economic conditions. **As such, it is imperative that this proposal does not pass.**

This misguided legislation encourages local governments to pass harmful regulations on reduced-risk nicotine products like e-cigarettes, which are shown to be 95% [less harmful](#) than cigarettes and the most effective tool for smoking cessation. The local regulations that SB 975 would allow for can be expected to lead to drastic increases in cigarette smoking in Hawaii, leading to a clear increase in tobacco related mortality.

It is the fundamental responsibility of state governments to protect their citizens. At times, these threats can come from local government officials. In the instance of tobacco harm reduction policies, local government officials act without the degree of scrutiny and accountability found at the state level. Similarly, lacking the expertise in healthcare policy, local restrictions and levies may act contrary to all available science and data, serving to restrict the ability of smokers to quit smoking with the help of reduced risk tobacco alternatives.

Studies have repeatedly shown that flavored vapes, which SB 975 would allow localities to regulate, are critical to helping adult smokers make the switch to vaping. Adults who use flavored vapor products are 43% more likely to quit smoking than an adult who uses un-flavored products, according to a [study](#) from ten of the world's top experts in cancer prevention and public health.

A [study](#) from Dr. Abigail Friedman at the Yale School of Public Health found that youth smoking doubled when San Francisco imposed a flavor ban in 2018. Before San Francisco's flavor ban, the city had lower youth smoking rates than comparable counties like New York and Los Angeles. After the flavor ban, San Francisco's youth smoking rate rose to 6.2% while comparable districts had an average rate of 2.8%. SB 975 would allow for localities to create public health disasters like in San

Francisco. Voting for SB 975 would be inviting a public health disaster, like the one that occurred in San Francisco, into Hawaii.

It is important to note that, contrary to some arguments made by opponents of this bill, “local control” at its core is about safeguarding individual liberties and restricting the growth of government; it is not a free pass for cities to do whatever they want. Localities are just as capable of being conduits for heavy-handed laws that will harm citizens. When that is at stake, state action is not only appropriate to safeguard individual freedoms – it is essential.

Additionally, prohibitions on e-cigarettes and tobacco products promote a black market for the products. Multi-million-dollar crime syndicates, that also engage in human trafficking and money laundering, flood the black market with unsafe products that produce revenue used to fund terrorism. For this reason, the US State Department has explicitly called tobacco smuggling a “[threat to national security](#)”.

Paradoxically local bans may therefore increase youth smoking in the state: By definition, criminals and smugglers are unlikely to obey laws and would not follow rigorous age-verification requirements mandated at reputable outlets.

About E-Cigarettes and Vapor Products:

- Traditional combustible tobacco remains one of the leading preventable causes of death in Hawaii. The negative health effects of combustible tobacco come from the chemicals produced in the combustion process, not the nicotine. While highly addictive, nicotine is a relatively benign substance like caffeine and nicotine use “does not result in clinically significant short- or long-term harms”.
- Nicotine replacement therapies such as nicotine patches and gums have helped smokers quit for decades. In recent years, advancements in technology have created a more effective alternative: vapor products and e-cigarettes. These products deliver nicotine through water vapor, mimicking the habitual nature of smoking while removing the deadly carcinogens that exist in traditional cigarettes.
- The [CDC](#) has found that only 3.1% of youths use e-cigarettes daily, disproving the myth of an ongoing “youth vaping epidemic.”

Benefits of E-Cigarettes and Vapor Products:

- Vapor products have been [proven to be at least 95% less harmful](#) than combustible cigarettes. A comprehensive analysis of nicotine product harm estimates that e-cigarettes expose users to just 4% of the harm of combustible cigarettes.

- E-cigarettes are also more than [twice as effective](#) at helping smokers quit than traditional nicotine replacement therapies. According to one [study](#), a smoker attempting to quit with an e-cigarette has an estimated 323% higher chance of achieving complete cessation compared to someone using a traditional nicotine replacement therapy like nicotine-containing patches, gum, or mouth spray.
- The Cochrane Review, the gold standard of medical meta-analysis, has identified “high certainty evidence” that e-cigarettes are more [effective](#) than nicotine replacement therapies at helping those who smoke quit.
- Vaping has been endorsed by over 100 of the world’s leading [public health organizations](#) as safer than smoking and an effective way to help smokers quit.
- When e-cigarettes entered the market in 2003, the U.S. adult cigarette smoking rate was 21.6%. Due to increased access to vaping, the U.S. adult smoking [rate](#) has plummeted to 13.7% as of 2018.
- An [analysis](#) by Public Health England demonstrated just how effective vaping is in helping people quit smoking, noting that in just one year, over 50,000 British smokers, who would have continued smoking otherwise, quit smoking with vaping.
- A University of Glasgow study showed that e-cigarettes particularly [help disadvantaged](#) persons quit smoking. SB 975 will have a tremendously negative impact on public health and would fail to decrease socioeconomic disparities by reducing adult access to products shown to improve public health.
- Evidence demonstrates that flavors play no role in youth uptake of vaping. Academic studies have found that teenage non-smokers “willingness to try plain versus flavored varieties did not differ” and a mere 5% of vapers aged 14-23 reported it was flavors that drew them to e-cigarettes. National Youth Tobacco Survey results have shown [no increase in nicotine dependency](#) among youths since flavored products entered the market.
- Large-scale [analysis](#) from Georgetown University Medical Center estimates that 6.6 million American lives can be saved if a majority of cigarette smokers switched to vaping. **This would save more than 28,600 lives in Hawaii.**

For the reasons outlined above, in the interests of public health, protecting small businesses, state tax revenues, and preventing the spread of smuggling cartels in Hawaii, we call upon you to **accept the science and vote against SB 975**. Over 25,000 lives quite literally depend upon it.

Sincerely,

Tim Andrews

House Bill SB 975

**Prepared Testimony By:
Rich Marianos
Retired Assistant Director
Bureau of Alcohol, Tobacco, Firearms and Explosives
Professor Georgetown University
Senior Law Enforcement Consultant for RAI Services Company**

Good afternoon ladies and gentlemen of the Health and Human Services Committee . My name is Rich Marianos, and I am a senior law enforcement consultant and subject matter expert on criminal tobacco trafficking.

Let me start by telling you a little about my background. I retired from a 27-year career at the Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) as Assistant Director. During my ATF career, I conducted, supervised and oversaw investigations into organized crime, counterterrorism, drug trafficking organizations and violent crime.

My ATF experience also includes the position of Special Agent in Charge of the Washington Field Division and Deputy Chief of ATF's Special Operations Division.

In addition to my consultation duties for law enforcement, I am also an Adjunct Professor at Georgetown University in Washington, D.C., where I teach courses in Applied Intelligence and Political Violence and Terrorism. If you cannot tell by my background, crime prevention and security are things that I take very seriously. During the past year, myself and other members of the law enforcement community testified in front of various State Legislatures about what a bad idea it was to pass a ban on flavor tobacco, and to increase taxes, creating a prohibition.

Please understand, if you ban flavored tobacco products, and disproportionately increase tobacco taxes in Hawaii, black market tobacco products will soon arrive despite best efforts ban them. Flavor tobacco will fall right in line with the other prohibited items such as guns and narcotics i.e. Black Tar Heroin, Fentanyl, Crack Cocaine and Ice Methamphetamine. The gangs and organized groups of criminals (Mexican Drug Cartels) will make a windfall in profits over these bad policy decisions.

According to law enforcement intelligence sources, the above described drugs are being smuggled into your State by the Mexican Cartels by way of commercial airlines, US mail services, smuggling tunnels, back roads, well placed bribes and trucking cargo/freight lines. The contraband comes from Mexico through Arizona to California (San Diego) to Hawaii.

According to Intelligence Sources, Mexican Drug Cartels, specifically, **The Jalisco Nueva Generacion aka The Tobacco Cartel** run by Edmund FERREIRA is making inroads into Hawaii to pursue illegal tobacco trafficking. FERREIRA was recently arrested in Hawaii for narcotic conspiracy and distribution and possession of Ice Methamphetamine and Fentanyl. Law Enforcement Sources also identify FERREIRA as owning three (3) cigarette factories that produce 30 brands of flavored cigarettes and flavored vaping products that sell for about \$3.60 per pack. This is evidence backed by arrests in your state, not anecdotal theory proffered by others, who never conducted an investigation.

Each day in cities and counties throughout the United States, tobacco is the currency of Organized Crime. It has become an easy way to traffic contraband at a minimal risk with a high return in way of money.

Based on my experience, training, and education the prohibition you will create will not work. It will endanger the safety of your citizens and your children through black market counterfeit products flooding your streets, by the likes of criminals I pointed out above.

The criminal element consistently adapts, always intending to make profits. Banning, outlawing, and eliminating flavor tobacco, or increasing the taxes on these products, will do nothing but create an already bigger crime problem in Hawaii. Just like the gun, gang, and drug violence.

**TESTIMONY OF TINA YAMAKI, PRESIDENT
RETAIL MERCHANTS OF HAWAII
February 15, 2023
Re: SB 975 RELATING TO HEATH**

Good morning, Chair San Buenaventura and Chair Keohokalole and members of the Senate Committee on Health & Human Services and the Senate Committee on Commerce and Consumer Protection. I am Tina Yamaki, President of the Retail Merchants of Hawaii and I appreciate this opportunity to testify.

The Retail Merchants of Hawaii was founded in 1901, RMH is a statewide, not for profit trade organization committed to the growth and development of the retail industry in Hawaii. Our membership includes small mom & pop stores, large box stores, resellers, luxury retail, department stores, shopping malls, local, national, and international retailers, chains, and everyone in between.

We are in opposition SB 975 Relating to Health. This measure establishes the criminal offense of unlawful shipment of tobacco products. Amends the definition of "tobacco products" under the Cigarette Tax and Tobacco Tax Law to include electronic smoking devices and e-liquids. Increases the license fee for persons engaged as wholesalers or dealers of cigarettes and tobacco products and the retail tobacco permit fee for retailers engaged in the retail sale of cigarettes and tobacco products. Repeals state laws that establish and govern the Electronic Smoking Device Retailer Registration Unit within the Department of the Attorney General; provisions of the Cigarette Tax and Tobacco Tax Law that govern delivery sales; and state law governing smoking that preempts and voids local ordinances and regulations conflicting with state law; and is effective January 1, 2024.

Any time there is an increase in retail operations albeit raising of taxes and implementation of fees or increase in shipping and goods, the cost is passed down to the consumer. **While the assumption is that if electronic smoking products are too expensive, less people will purchase them. This is not the case.** We will see more people finding ways to purchase them from military facilities where there are no taxes charged, furthermore these pushes vape products to be even more desirable on the black market where prices are lower. Vape products are one of the most desirable items that shoplifters target, even when we have them behind the registers or behind lock and key. And many of the goods sold on the black market have been stolen from retailers.

If raising the fees is to be meant to deter people from smoking or vaping it may have the opposite effect and have them turn back to cigarettes. In 2021 The New England Journal of Medicine published an article that found that e-cigarettes were nearly twice as effective as conventional nicotine replacement products, like patches and gum, for quitting smoking. The study was conducted in Britain and funded by the National Institute for Health Research and Cancer Research UK

If the raising of fee is to deter youth from obtaining smoking or vape products, then the focus should be on cracking down on those who are illegally and intentionally letting minors obtain these products. Hawaii already has a law in place that states that it is unlawful for a person under the age of 21 years to purchase electronic vaping devices, e-liquids and tobacco products. The majority of the shops on our islands are responsible and have a policy that they will Not sell a vape device or products to anyone 21 years old and under. **Many of whom are underage are obtaining their cigarettes and vaping devices from their parents or older friends who purchase it for them or the minors are purchasing them on the black market.** Retailers often go as far as to not selling to the adult that accompanies the minor into the store if it is revealed that the device or product that they are seeking to purchase is for the minor. Retailers have no control over their products once they are sold and the customer walks out the door with them. It is often the case that an adult family member or friend that purchases the vape devices or tobacco products for the minors and gives it to the minor away from the retail store.

Many retailers statewide are already operating on a thin margin and face stiff competition. Raising the tobacco tax and permit fee exponentially will truly hurt locally owned businesses, especially the small locally owned businesses' and may potentially force some of them to close. We will see more people finding ways to purchase them from military facilities where there are no taxes charged or purchase them through the black market where tobacco and e-cigarettes are sought-after items to steal by retail organized crime.

We urge you to hold this measure. Mahalo for this opportunity to testify.

Testimony on Hawai'i SB 975 — “RELATING TO HEALTH”

Dear Chairs and Members of the Committee,

My name is Yaël Ossowski and I am the deputy director of the consumer advocacy group Consumer Choice Center.

In the name of protecting this great state and its residents, this joint committee is being asked to consider SB975, a bill that in its title relates to “health,” but in fact puts safer alternatives to tobacco products, alternatives that do not cause nearly the same harms nor have the same society costs and burdens, at risk.

This bill addresses important topics for health, safety, and self-rule.

Most vitally, it inscribes into law the idea that market-derived nicotine alternatives like vaping devices and liquids, which contain no tobacco, are tobacco. This bill inscribes into law that these products, used by over 100,000 Hawaiians to quit smoking, many of them over 65 according to the [Hawaii Journal of Medicine and Public Health](#), should be taxed, restricted, and made unavailable to those who want to switch.

I speak to you as a consumer advocate with extensive experience in helping protect the rights of adults to choose safer and less harmful products.

At present, adults in Hawaii benefit from a safe, legal, and competitive market in non-tobacco nicotine alternatives. These products provide adults who have been addicted to smoking to switch to products that can save and radically change their lives.

Our goal should be to expand people’s choices to quitting tobacco, not to limit them severely.

Our fear is that, if SB 975 is adopted, counties will move quickly to deprive these adult consumers of these safer options, unaware of the severe repercussions and harm that would happen.

The State of Hawaii, its legislators, committees, should hold those deliberative discussions and debates with the full facts.

Our policies must be fair, just, and based on scientific evidence. I believe this body, composed of diverse legislators from the entire state, can help make that determination for the residents who depend on you to protect their consumer choice. **We would urge you to vote against SB 975.**

Thank you for your time.

Yaël Ossowski
Deputy Director
Consumer Choice Center

February 15, 2023

**Testimony of Alex Clark, CEO, CASAA
Hawai'i - Senate Health and Human Services Committee
RE: SB 975 (Opposed)**

Chair San Buenaventura, Vice Chair Aquino, Honorable Members of the Senate Health and Human Services Committee,

Thank you for the opportunity to write on behalf of our members in Hawai'i who support tobacco harm reduction and access to low-risk alternatives to smoking. I am writing in opposition to SB 975, which would grant local governments the authority to regulate the sale and use of tobacco and nicotine products.

The Consumer Advocates for Smoke-free Alternatives Association (CASAA) is a 501(c)(4) nonprofit public health and education NGO with over 250,000 members from all 50 states. We are the leading consumer-based tobacco harm reduction (THR) organization in the United States, representing the interests of consumers from all walks of life who currently use, or in the future may choose to use, low-risk, smoke-free tobacco and nicotine alternatives. We do not represent the interests of manufacturers or vendors of these products.

SB 975 would put local regulation of tobacco and nicotine sales on par with rules that include parking regulations for horse-drawn carriages and nude bathing in public. While it is understandable that municipalities would benefit from establishing their own parking ordinances and protecting burial grounds, access to tobacco and nicotine products is more complex and nuanced by comparison. Access to low-risk tobacco products is not simply a matter of trespassing, respecting religious norms, or infrastructure; it is a human rights issue.

Similar to many other issues, enacting regulations at the local level across multiple jurisdictions is part of a larger strategy to establish new regulations statewide. Once enough of a state's population is living under the new rules, inconsistencies among local laws dictates the need for uniform regulations over the entire state. Unfortunately, when it comes to complicated regulations involving public health, local officials are not known to possess the skill set or resources needed to fully deliberate a new policy. With regard to tobacco regulation, it is arguable that local officials are not being afforded the opportunity to perform their own due diligence. Instead, they are motivated by an over-sized concern about youth access to nicotine (and other drugs) with minimal consideration for the effects a new restriction may have on people of legal purchase age.

Tracking and participating in changes to local ordinances is notoriously difficult. Often, stakeholders who find their businesses on the receiving end of a local law will be the last to find out about a proposed rule change. Sometimes this is a result of notification based on license holding while other times antiquated notification strategies fail to provide the necessary details in a timely manner. In short, engagement at the local level requires navigating known and unknown barriers to participation and has the tendency to exclude some of the most important voices on a particular issue. With regard to regulating sales of tobacco and nicotine products, this is a feature rather than a bug.

Notably, SB 975 is being promoted in the wake of other failing policies on restricting access to flavored nicotine products. There is little doubt that granting authority to Hawaii's local governments is a precursor to enacting similar, overly-restrictive anti-nicotine ordinances at the municipal level that will have similar results: pushing people back to smoking, or to the dark corners of an underground market.

It is certainly laudable that we all want to protect young people from the very adult challenges they may face at a young age. But overweighting concern about youth access is leading to denying everyone, regardless of age, access to innovative and safer alternatives to smoking. Rather than severely limit or eliminate people's access to tobacco and nicotine products, empowering young people with education and strategies to resist substance use has a higher probability of success. Productive conversations about purchase and use of any substance cannot happen in a zero-tolerance environment. CASAA encourages this committee to reject SB 975.

Thank you for your time and for considering our comments,

Alex Clark
CEO, CASAA
aclark@casaa.org

VOLCANO®

February 14, 2023

From: Scott Rasak, VOLCANO Vape Shops
Chief Operating Officer

RE SB975 – oppose.

Thank you for the opportunity to submit testimony.

VOLCANO. is the largest independent retailer & wholesaler of vapor products and vaping accessories in the State of Hawaii. We currently own and operate 16 locations statewide and employ over 90 full-time workers to support sales of our products in Hawaii. We service thousands of adult Hawaii consumers who legally purchase vaping products.

We stand in opposition to SB1447 for the following:

- County level tobacco regulations fragment the market for vaping products potentially putting some vaping users at a disadvantage to other Hawaii residents in access to vaping products.
- State will see a dramatic drop in tax collections
- Small businesses will be hesitant to provide jobs and viable businesses in a marketplace with uncertain regulatory laws

It is our belief that this continuing unjustified classification and requirements are not in the best interests of the State of Hawaii.

Thank you for your time and consideration. If you have any questions, please feel free to contact me directly.

Sincerely,

Scott Rasak
Chief Operating Officer
VOLCANO Vape Shops
330 Sand Island Access Rd. #400

February 15, 2023

The Honorable Joy A. San Buenaventura, Chairman
The Honorable Henry J.C. Aquino, Vice Chairman
Hawaii Senate Committee on Health and Human Services

The Honorable Jarrett Keohokalole, Chairman
The Honorable Carol Fukunaga, Vice Chairman
Hawaii Senate Committee on Health and Human Services

Dear Members of the Hawaii Senate Committees on Health and Human Services and Commerce and Consumer Protection,

On behalf of National Taxpayers Union, the nation's oldest taxpayer advocacy organization, I write to share our strong opposition to Senate Bill 975. This bill would tax vapor products and other alternative nicotine products at the same rate as combustible tobacco products — a drastic 70%.

It is clear that vapor products are innovative solutions for smokers transitioning toward significantly less harmful alternatives. As you probably know, vapor products do not contain tobacco. They contain nicotine without the harmful chemicals found in traditional tobacco products intended for smoking. It is very concerning that this bill would apply a severe 70% tax on electronic nicotine delivery systems. This would severely limit the accessibility of these alternative nicotine products to lower- and middle-income residents.

Promoting healthy, smoke-free lives and preventing disease is an admirable goal. However, SB 975 will sadly have the opposite effect as intended. Taxing smoke-free alternatives at the same rate as cigarettes eliminates an economic deterrent that encourages smokers to opt for a less harmful option. These products are very different, and the definition in state law and tax code should reflect their distinct characteristics.

This bill also opens the door for disruption for small business owners across Hawaii. Removing the statewide preemption on local ordinances that conflict with state law will cause confusion for local businesses and create difficulty as they attempt to comply with various regulations. Not only will this adversely affect the economy of Hawaii, but it can also lead to diminished access to proven public health solutions, driving people struggling with addiction to find products that skirt the state's taxing and regulatory authority.

In summary, this bill does a disservice to public health, will inflict harm on small businesses, could potentially create a black market for unregulated use and distribution, and will require consumers to pay more for safer alternatives.

National Taxpayers Union strongly believes Senate Bill 975 will hurt Hawaiians as they try to promote healthy lives and help those who struggle with smoking addictions. We urge you to stand with taxpayers and reject government overreach and tax increases.

Sincerely,

Mattias Gugel
Director of State External Affairs
National Taxpayers Union

Comments:

Hawaii has among the highest rates of middle school and high school e-cigarette (ESD) use in the nation and it has been declared vaping a youth epidemic by the U.S. Surgeon General. One in three high school students and one in five middle school students report “currently using” e-cigarettes (per 2019 YRBS data).

As a parent and health educator for the State Health Department, this is extremely concerning as there are numerous health impacts from e-cigarettes. Nicotine addiction affects kids’ ability to focus and learn at school, it affects their emotions, it affects their relationships, and it affects their self-confidence. The list goes on. Further, once teens become addicted to nicotine, it’s very difficult to quit. Teens are also particularly vulnerable to nicotine, which permanently impacts their still developing brain.

Taxing and regulating sales of tobacco products is a proven strategy to reduce youth rates of use. However, e-cigarettes are the ONLY tobacco product without a tax and are being poorly regulated! E-cigarettes need to be taxed and the funds accrued need to be put into prevention and control services.

I am in strong support of SB975 because it applies a tobacco tax to e-cigarettes and requires licensing and permitting for tobacco retailers and wholesalers.

Our youth deserve their health! Our youth deserve to remain addiction free. Please help protect our youth by supporting SB975.

Mahalo, Kristin Mills, M.S., M.A.

Comments:

To the members of the Committee,

I am writing to voice my full support for HB975, which is one necessary step to protect Hawaii's keiki from the public health plague of electronic smoking devices. As a teacher of teenagers, I have heard too many stories of parents' distress at the explicit marketing tactics used by tobacco companies to hook kids on these devices. The time is always right to do what is right; please do not allow tobacco lobbyists to make the public health decisions for our community. I urge the Committee to advance this necessary bill.

With aloha,

Dave Ball, Honolulu

Comments:

Aloha Senators:

Please SUPPORT this measure - its comprehensive nature is seriously overdue to reduce vaping which has soared among Waimea youth during the pandemic. The data tells us it's not just happening here on Hawai'i island but statewide and the products are virtually unregulated.

Kids are sneaking vaping puffs on school buses, in bathrooms, just about everywhere on campus - even in classrooms. It was already a serious issue pre-pandemic and Waimea Middle School immediately stepped up to work with its 6th-8th grade students, teachers, counselors, families and community healthcare providers to educate everyone about the severe harm from nicotine addition and exposure to other harmful chemicals on young brains when vaping under age 25.

Because vaping incidents soared about 5 years ago, we decided to hold a well-attended community town meeting in partnership with Waimea Community Association, all Waimea schools, Hawaii Island Public Health Institute (HIPHI) and the County Prosecutors Office.

Since then, we have held hands-on science-health lessons for all students, briefings for teachers and counselors, met with many parents whose children had been caught vaping, and even hosted a virtual town hall for Hawai'i Island in partnership with HIPHI and Tobacco Free Hawai'i.

This presentation was streamed live to both the school's and community association's Facebook pages and can be watched here on demand: <https://youtu.be/TGbhjZmjBzY>

It's very informative and intended to be student and family friendly and has attracted a sizeable diverse audience. But none of this is enough.

Children are enticed by flavored vapes and how relatively inexpensive and accessible they are. Not only are they available in stores throughout Waimea (and often purchased by parents/adults for our kids under the misguided notion that they are safer - and cheaper - than cigarettes), but we also know of at least one "enterprising" high school student in our community who was actively buying product online and selling it here.

We need a comprehensive approach and this bill speaks to this.

I am available to answer questions.

Mahalo for your time, Patti Cook (808) 937-2833

Comments:

The rise in use of electronic smoking devices among Hawai'i youth is higher than the national average. Between 2011 to 2015, the proportion of youth experimenting with electronic smoking devices increased six-fold among middle school youth and four-fold among high school youth. In 2017, 27% of public middle school students and 42% of public high school students tried electronic smoking devices. By 2019, 31% percent of public middle school students and 48% of public high school students had used an electronic smoking device.

In 2020, eight in 10 youth who currently use e-cigarettes reported using a flavored product. These rates are higher than the national average, demonstrate an alarming increase in Hawaii's youth nicotine use, and serve to illustrate a bleak future of nicotine addiction in the next generation. Toxicologists have warned that e-liquids pose significant risks to public health, particularly to children.

The 2016 Surgeon General's Report found that there are numerous policies and practices that can be implemented at state and local levels to address electronic smoking device use among youth and young adults, including preventing access to electronic smoking devices by youth, increasing taxes imposed upon electronic smoking devices, increasing prices of retail licensure, and regulating electronic smoking device marketing.

The rapid growth of the electronic smoking device industry, including retail businesses selling electronic smoking devices or e-liquid, necessitates further regulations to protect consumers, such as requiring retailers of e-liquid to obtain a retail tobacco permit. The 2016 Surgeon General's Report found that children and youth are especially vulnerable to the targeted online social and digital media marketing of inexpensive electronic smoking devices offered in enticing concealable forms and e-liquids in various flavors.

The United States Food and Drug Administration has expanded its regulatory authority to all tobacco products, including electronic smoking devices, cigars, and hookah and pipe tobacco. While there is federal consensus that electronic smoking devices are tobacco products, Hawai'i has no state tobacco tax imposed on electronic smoking devices and e-liquids.

While the use of electronic smoking devices and e-liquids also carry the risk of adverse health consequences, these products are currently taxed at a much lower rate than cigarettes. Decades of research have shown that increasing cigarette prices, such as through the imposition of cigarette taxes, can reduce the rate of smoking by adult and youth smokers. As outlined in the 2016

Surgeon General's Report, current findings show this public health policy can likewise be applied to electronic smoking devices and e-liquids to reduce youth consumption. Please support SB975.

Comments:

Aloha honorable Senators,

My name is Dyson Chee, I am 20 years old, and I am submitting testimony in strong support of SB975. E-cigarettes are the only tobacco products without a tax, and we know that taxing tobacco products and cigarettes is a proven strategy to reduce youth initiation and encourage those who smoke or use tobacco products to quit. I also urge you to include the taxation rate of 70% of the wholesale price to create parity between e-cigarettes and other tobacco products.

Thank you for the opportunity to testify,

Dyson Chee

Comments:

Aloha,

My name is Bryan Mih and I am a parent, pediatrician, and the medical director of the Kapi'olani Smokefree Families Program. For the health of our keiki and their families, it is vitally important to support SB 975. This bill improves regulations on e-cigarettes or "vapes" in Hawai'i and helps keep them out of the hands of keiki.

Electronic smoking devices are used in a similar manner as cigarettes, yet are not taxed as such. The American Academy of Pediatrics strongly supports regulation and taxation of electronic smoking devices to prevent initiation of use, especially by young people.

Hawaii has one of the highest rates of middle schoolers (18%) and high schoolers (31%) currently using e-cigarettes. For Native Hawaiian and Pacific Island youth the rates are even higher: 30% for middle schoolers and 40% for high schoolers. We have even had reports of second grade children using e-cigarettes.

Nicotine is a highly addictive drug that impacts the adolescent brain, reducing impulse control and affecting mood. Those who use e-cigarettes are four times more likely to smoke regular cigarettes later on. The e-cigarette industry claims these are cessation devices, but a recent study has shown that even if one adult can quit with these devices, the trade-off is 81 young people who will start the habit in their place. This is completely unacceptable.

Once young people are addicted to nicotine, it is extremely difficult to quit. Appropriately regulating and taxing these electronic nicotine devices just brings these products in line with laws regarding other tobacco products. This is a common sense solution that is long overdue and which will improve the health of many, especially our keiki and young people.

Please support this important measure. Mahalo for your consideration.

Sincerely,

Bryan Mih, MD MPH FAAP

Pediatrician

Comments:

- E-cigarettes have evaded many tobacco regulation laws for decades, leading to a sharp rise in the use of these products, especially by young people, who are enticed by their unregulated marketing and lack of proper regulatory controls on an addictive drug, nicotine.
- Comprehensive regulation will be a major step in reversing youth use of e-cigarettes.
- Two decades of comprehensive regulation of cigarettes and other tobacco products has helped Hawaii'i save \$1B in healthcare costs.
- Comprehensive regulation has lowered the adult smoking rate to 11.6%; and
- Reduced high school smoking to 5.3% in 2019 (CDC YRBS 2017-2019).
- E-cigarettes are not FDA-approved cessation devices.
- Comprehensive tobacco regulation does not stop access to FDA-approved nicotine replacement therapy (NRTs) – approved smoking cessation products.
- E-cigarettes are the only tobacco products without a tobacco tax.
- Unregulated, unchecked online sales of e-cigarettes need to be addressed. This measure restricts online sales of e-cigarettes directly to consumers – requiring face-to-face purchases makes it harder for youth to obtain these products via the internet. Licensed tobacco retailers would still be able to receive shipments of products.
- Taxation, regulation, licensing & permitting, education, and cessation services are components of comprehensive tobacco regulation and a key to lowering the use of tobacco use.

Please support SB975

Thank you for your consideration,

SB 975, Relating to Health
February 15, 2023

Committee of Health & Human Services

Senator San Buenaventura, Chair
Senator Aquino, Vice Chair

Committee on Commerce & Consumer Protection

Senator Keohokalole, Chair
Senator Fukunaga, Vice Chair

**TESTIMONY IN SUPPORT OF SB 975
RELATING TO HEALTH**

I am Julian Lipsher testifying as a private citizen in support of SB 975. I currently serve as Chair of the Coalition For a Tobacco Free Hawaii's Policy Committee which is part of the Hawaii Public Health Institute and formerly was with the Hawaii State Department of Health focusing on tobacco prevention and control and chronic disease prevention.

The bill as it relates to electronic smoking devices (ESD) proposes to:

- * Establish a regulatory structure for shipment of tobacco products.
- * Amends the definition of 'tobacco products' to include ESD's and e-liquids in Hawaii Revised Statutes.
- * Require licensing and permitting fees for ESD retailers and wholesalers.
- * Establish a consistent rate of tax with other tobacco products.

The Hawaii State Legislature has enacted numerous pieces of legislation on traditional tobacco products. These measures have resulted in significant declines in both adult and youth smoking rates, some of the lowest in the nation, saving both money and lives. Now we are faced with the challenges presented by the tobacco industry on vaping, e-cigarettes and new methods of nicotine delivery systems.

- e-cigarettes have evaded tobacco regulation laws for almost a decade, leading to a sharp rise in the use of these products, especially by young people, who are enticed by their marketing, attractive flavoring, and lack of proper regulatory controls on an addictive drug, nicotine.
- E-cigarettes are the only tobacco products without a tobacco tax.

- Comprehensive regulation that includes taxation, licensing and permitting will be a major step in reversing youth use of e-cigarettes.
- Two decades of comprehensive regulation of cigarettes and other tobacco products has helped Hawaii'i save an estimated annual \$526 million in direct healthcare costs and another \$387 million in lost productivity.
- Comprehensive regulation of cigarettes has lowered the adult smoking rate to 10.1%; and reduced high school smoking to 5.3%.
- E-cigarettes are not FDA-approved cessation devices.
- Comprehensive tobacco regulation does not stop access to FDA-approved nicotine replacement therapy (NRTs) – approved smoking cessation products.
- Unregulated, unchecked online sales of e-cigarettes need to be addressed. This measure restricts online sales of e-cigarettes directly to consumers – requiring face-to-face purchases makes it harder for youth to obtain these products via the internet. Licensed tobacco retailers would still be able to receive shipments of products.

The Legislature is encouraged to apply what has been successful strategies for traditional tobacco products, to electronic smoking devices and the epidemic of vaping among our youth.

Thank you for the opportunity to testify.

Julian Lipsher
jdlipsher@hawaii.rr.com

SB 975

I am writing as a long-time Kauai pediatrician in support of SB975, which regulates electronic smoking devices. E-cigarettes have evaded taxation as a nicotine device for years due to the tobacco lobby's false argument that they are smoking cessation devices. In fact, electronic smoking devices have no FDA approval as a cessation device, unlike other products such as nicotine gums and patches. To the contrary, electronic devices actually promote nicotine dependence by functioning as a starter drug for children and adolescents and utilizing liquids with very high nicotine concentrations. These devices have targeted our children by using attractive packaging and flavored liquids. As a nicotine delivery device, they must be taxed at the same rate as regular cigarettes. Face to face and online sale of e-cigarettes and liquids should be licensed and monitored, with strong consequences for violations. Thus far there are some rules, but they are regularly flouted without fear of punishment, as several studies of vape shops have demonstrated. The FDA has shown it has little appetite for monitoring and punishing violators of its own rules and has put in place a very prolonged approval process of vaping products which has no hope of stemming the tide of new products continuously brought forth by the tobacco industry. For the sake of our keiki we must put our best foot forward in regulating this dangerous and addictive nicotine product. SB975 is a very promising strategy for accomplishing this worthy goal.

Linda Weiner, MD
Pediatrics, Kauai

Kelsey Chuckovich	Individual	Support	Written Testimony Only

Comments:

Aloha,

Please consider my testimony in strong support of SB 975.

E-cigarettes are currently an unregulated tobacco product. A significant number of youth in Hawaii are using e-cigarettes as a result. The tobacco industry uses marketing to youth with fruit flavors, and e-cigarettes are easily accessible through online sales. Comprehensive regulation will help to reduce youth access to e-cigarettes and therefore reduce initiation and addiction to the tobacco products.

Comprehensive regulation of cigarettes has made a significant impact, reducing healthcare costs, and youth smoking in Hawaii. Regulating e-cigarettes can have a similiar impact. Taxation, regulation, licensing & permitting, education, and cessation services are all components of comprehensive tobacco regulation and can lower tobacco use.

Comprehensive regulation of e-cigarettes will positively impact the health of our youth in Hawaii. It will decrease the initiation and potential addiction to e-cigarettes and tobacco products. Please consider my testimony in favor of SB 975.

Sincerely,

Kelsey Chuckovich

Comments:

I, Shani Carvalho are in strong support of SB975 that would include electronic smoking devices as a tobacco product. This comprehensive regulation will be a huge step in protecting our youth and reversing the use of e-cigarettes among them. Currently e-cigarettes are the only tobacco products without a tobacco tax, yet these electronic smoking devices continue to addict youth with the nicotine contained in the e-liquid. It is time to protect our youth from tobacco and vaping companies, the time is now.

Members of the Committee on Health and Human Services

Members of the Committee on Commerce and Consumer Protection

Re: SB 975 Relating to Health, Strong Support

Senators Buenaventura, Aquino, Keohokalole, Fukunaga, and members of the Committees on Health and Human Services and Commerce and Consumer Protection:

SB 975 will address the continued escalation of e-cigarette use among our teens, putting our children’s health at risk – including becoming a lifelong addiction. By addressing the unlawful shipment of e-cigarettes, taxing them as tobacco products, and licensing and permitting sellers, you will implement comprehensive regulations to address this crisis.

As a graduate of the University of Hawai‘i School of Public Health and a lifelong resident of the State of Hawai‘i, I am expressing my STRONG SUPPORT of this bill. I strongly support proven strategies like taxing tobacco products and cigarettes. E-cigarettes are now the most popular tobacco product among youth – and that’s largely because it’s not subject to many of the regulations other tobacco products are subject to. By implementing the same policies and regulations Hawai‘i used to reduce cigarette use to record lows, we can reverse the trends in youth e-cigarette use.

Hawai‘i is in the midst of a youth vaping epidemic, with one in three high school students and one in five middle school students reporting “current use” of e-cigarettes. Hearing elementary school teachers and administrators from our district complain about the students using flavored vaping products and having to call 911 for health emergencies is gut-wrenching and unacceptable.

E-Cigarettes are the only tobacco products without a tax! Please also keep in mind that e-cigarettes are NOT FDA-approved for cessation and this regulation DOES NOT stop access to FDA-approved nicotine replacement therapy (approved smoking cessation products).

If we are truly in support of our keiki and citizens of Hawai'i, I again respectfully request your support of this bill. If our aim is to protect our keiki and reduce the burden of tobacco in our communities, we must do better and we must do it now.

Submitted By	Organization	Testifier Position	Testify
Michael Paul	Individual	Support	Written Testimony Only

Comments:

Aloha, I am Michael Paul, a tobacco treatment counselor in Honolulu. I am writing in strong support of SB975, to regulate e-cigarettes as tobacco products. E-cigarettes, colloquially known as "vapes" have escaped regulation time and time again leading to a sharp rise in use, particularly among children and young adults.

After two decades of comprehensive regulation we have seen clear success in lowering the rates of smoking among adolescents and young adults. It's now time for us to do the same for e-cigarettes/vapes, regulating them just the same as other tobacco products. Just like cigarettes, or chewing tobacco, the point of e-cigarettes is to deliver nicotine, a highly addictive substance, to the user. The multitude of flavors available for "vapes" makes it distressingly easy to deliver that nicotine to a younger and younger consumer.

Adopting comprehensive taxation, permitting, and licensing regulations along with education and cessation services will be a key component in the fight against tobacco and lowering the rate of new nicotine initiation in youth and young adults.

Mahalo,

-Michael Paul

Senator Joy San Buenaventura, Chair
Senator Henry Aquino, Vice Chair
Members of the Committee on Health and Human Services

Senator Jarret Keohokalole, Chair
Senator Carol Fukunaga, Vice Chair
Members of the Committee on Commerce and Consumer Protection

I'm Zoey, a local youth from Nu'uuanu/Liliha, and I support SB975.

As a youth that has personally seen the impacts of tobacco on my family members and friends, namely my grandpa who had passed away from tobacco use as well as my many fellow peers in middle school, I strongly support the bill to tax and regulate e-cigarettes as any other tobacco product.

Taxing and restricting the online sale of e-cigarettes will undoubtedly help prevent youth addiction to these products, especially since inexpensive accessibility and unregulated online sales have been primary sources of tobacco products for Hawaii kids in high school, middle school, and even elementary school. I've seen it first hand, when my fellow classmates and friends would fill the school bathrooms with sickly sweet scents of cotton candy using vapes that they bought online with just the click of a button. By implementing the same policies and regulations Hawai'i used to reduce cigarette use to record lows, we can reverse the trends in youth e-cigarette use and prevent further health consequences on kids like myself.

Therefore, I urge the committee to support SB975, so that we can truly prevent the dangers of tobacco from affecting both my generation and our future generations.

Mahalo,
Zoey Duan

Senator Joy A. San Buenaventura, Chair and members of the Committee on Health and Human Services

Senator Jarrett Keohokalole, Chair and members of the Committee on Commerce and Consumer Protection

My name is Karennia and I'm from Mililani, Oahu. I am submitting testimony in support of SB 975 to regulate e-cigarettes like other tobacco products. This will reduce the amount of lives lost from tobacco usage and complications due to tobacco, especially among children. Did you know that if this problem is not addressed, 21,000 children alive today will die from tobacco usage? We must protect our children from tobacco and the only way we can do that is by regulating e-cigarettes like other tobacco sales.

I am only in high school and already some of my classmates have admitted to using tobacco products, such as e-cigarettes. This is terrible. I am close to my classmates and the last thing I want is for them to have health problems (or even die) from using tobacco products. The tobacco industry has admitted to marketing towards high schoolers, a fact that I find disgusting. Tobacco industries use flavors to hook children, so children become addicted to nicotine.

There needs to be a tobacco tax attached to e-cigarettes. Applying a tax to tobacco products has been proven to reduce the number of smokers, therefore saving many lives, especially those of young people. This tax would be about 70% of the wholesale price, the same as other tobacco products.

Restricting online sales of tobacco products, mostly e-cigarettes, is also crucial to saving lives. Children (even ones as young as six years old!) can access tobacco products online, which is scary. It's easy for them to do so, and resell them to classmates. This is obviously really bad and needs to be stopped. Why should e-cigarettes be available for purchase online, when combustible cigarettes aren't?

Lastly, getting a license and a permit to sell tobacco products is necessary. Right now, people who sell e-cigarette cannot get revoked or anything. They just need to register. This is why it's so easy to buy tobacco products and why so many kids are doing so! If these retailers were to be licensed, this license can be revoked if they sell to children.

As a teenager, this issue is really important to me. Thank you for taking the time to hear me out!

From: Jaelyn Natividad

Re: Support for SB 975

I believe that we need to regulate e-cigarettes the same as other tobacco products because it includes a common unsafe component, nicotine. Nicotine is known to quickly reach one's brain within a span of 10 seconds. Once your brain is impacted, the nicotine causes your brain to release adrenaline resulting in creating pleasure and energy. Thus is the reason as to why people get quickly hooked and affected.

Within my community, there are many students that use e-cigarettes. This does not only impact their bodies and personal health but it impacts the environment and community around them. It may start with one student with an e-cigarette, but then another will become a follower and so on and so forth, and a classroom of students will be trying them by the end of the week.

My athletically and academically minded cousin started vaping. It hurts to see my cousin throwing years away from their future. The reason being is because e-cigarettes provide detrimental effects to one's body, mentally and physically. My cousin may not show the effects just yet, but in the future my cousin will experience negative impacts. As a blood cousin, it hurts to see him do this to himself because of stress or whatnot. I love my cousin too much to see my cousin throw their life away!

By increasing the cost of e-cigarettes by taxing them like other tobacco products it will make them less attractive to students like my cousin.

Senator San Buenaventura, Chair and members of the Committee on Health & Human Services

Senator Keohokalole, Chair and members of the Committee on Commerce & Consumer Protection

Support for SB 975

My son started vaping in 10th grade. He got the idea and supplies from kids who were not even his friends at Kahuku. He has tried to quit several times since leaving high school 2 years ago, but he just can't. He started before he knew what the impact and cost would be...his rough, scratchy voice and cough, his need to hide what is now a shameful habit, his dependence on substances. He and I both wish it had been more difficult to get or that he understood better what he was getting into. I hope other teens will be empowered to choose a vape-free life.

Support for SB975

I support SB975. My name is Kinohi and I am from Hau'ula O'ahu and a member of the Coalition for a Tobacco-Free Hawaii Youth Council.

I support this bill because I see the effects tobacco and e-cigarettes have on the world around me. E-cigarettes are highly addictive products that contain nicotine, and nicotine is a highly addictive chemical that can have bad effects on your brain in several ways. I support this bill because the tobacco industry targets people like me and people in my community.

My community is mostly made up of native Hawaiians and Pacific Islanders. These companies are targeting people like me, people in my community, low-income Native Hawaiians, and Pacific Islanders, not only are these companies targeting certain people by their ethnicity and social class but they are also targeting people my age. I am 17 years old and I see kids as young as 10 years old vaping. A Philip Morris executive once said "Students are tremendously loyal. If you catch them, they'll stick with you like glue." and this is true. Hawaii is known for having the highest rates of youth vaping and 1 in 3 Hawai'i high school students report using e-cigarettes on a regular basis.

Youths are more price sensitive than adults, so taxing e-cigarettes the same as other tobacco products will help decrease youth e-cigarette use, this would help to end the youth vaping epidemic.

Kinohi
Hau'ula, O'ahu

Chair Joy A. San Buenaventura and members of the Committee on Health and Human Services

Chair Jarrett Keohokalole, and members of the Committee on Commerce and Consumer Protection

I'm Samantha Lay, a junior at Roosevelt High School and I **support** SB975 as it calls for regulating e-cigarettes similar to other tobacco products.

The alarming issue facing youth today is one worth addressing and putting forth the effort to lessen those negative impacts. I may not have personally experienced those effects myself, but have observed one of my good friends succumb to the faults of peer pressure. Learning she suffered from heart/lung complications as a result, the extensiveness of harm done came to light as it was challenging to see her have a difficult time breathing, especially when confronted with mask restrictions. Additionally, the health disparities are definitely important to emphasize. With certain marginalized groups, considering race and socioeconomic status, specific audiences are being targeted by the tobacco industry marketing on-island. Not to mention the rates that correspond to vaping in such early stages of individuals' lives. With e-cig use on the rise, we see a rapid increase in addiction and demand for these products. With this bill, the objectives to reduce tobacco use will be ensured, putting youth in the forefront of it all.

By taxing e-cigarettes at a similar rate to other tobacco products it will raise the price which will deter youth from starting and encourage youth to quit.

Senator Joy San Buenaventura, Chair and members of the Committee on Health & Human Services

Senator Jarrett Keohokalole, Chair and members of the Committee on Commerce & Consumer Protection

Support for SB 975

Vapes negatively impact our youth because they are very addictive and for our generation easy to get their hands on. By taxing them like cigarettes it will raise the cost which will keep some students from starting using them.

Vapes are just as addictive and harmful as other tobacco products. And for our generation we would rather vape than smoke cigarettes. Because cigarettes give an unpleasant taste and scent. I'm a junior in high school and my first encounter with a vape was freshman year. In my head they smelt better, looked cooler and everyone did it. So most of the people I hang with do it. But it never crossed my mind for me to try it, because I know it's wrong. Yet every day I'm pressured to try.

Vaping heavily impacts my community, we have a vape shop 4 minutes away from our school and over a 100 kids walk by it every day on their way home. By making the price higher through tax fewer would stop and try to buy them.

Carmine

To: Senator Joy A. San Buenaventura, Chair and members of the Committee on Health and Human Services. Senator Jarrett Keohokalole, Chair and members of the Committee on Commerce and Consumer Protection.

From: Daniel Valera

Re: Support for SB975

E-cigs are also addictive and will harm your body the same as cigs or even worse so should be regulated in the same way.

One of my uncles recently passed away from lung cancer because he smoked cigarettes all his life. My peers are addicted and constantly needing to leave class to get a hit. Kids are constantly going up to each other and asking if they have a vape like it's a normal thing.

Increasing the cost by taxing them will help reduce youth use. Maybe if cigarettes had been more expensive when my uncle was a kid it would have stopped him from starting, and he would still be here.

Senator Joy San Buenaventura, Chair
Senator Henry Aquino, Vice Chair
Members of the Committee on Health and Human Services

Senator Jarret Keohokalole, Chair
Senator Carol Fukunaga, Vice Chair
Members of the Committee on Commerce and Consumer Protection

I believe it's important to regulate e-cigarettes the same as other tobacco products and **support SB 975**. It's not okay for these tobacco companies to target young audiences with these cheap products, ruining their futures, they shouldn't be in the hands of teenagers or young adolescents. Making them more expensive by taxing them like other tobacco products will make them less attractive.

I was influenced into vaping by a bad group of friends who were also influenced by the tobacco industry. I instantly got hooked and loved the flavor of it. When I saw the effect it had on my body, I could barely hold my breath when I swam and when I ran I would get out of breath very quickly. I knew I was in trouble. I told my boyfriend who was in the youth council group the effects vaping was having and he helped and showed me what vaping can really do and helped me to quit vaping and now I'm trying to help others.

The availability of flavored tobacco products negatively impacts youth and other targeted groups because it makes the youth blind to the risks and makes them want to try them without them knowing the harm it can do to their bodies and flavored tobacco makes kids get hooked easily when they taste so good. The low price of vapes makes them easy to get.

Raising the price will help but we need to do more. The relatively easy access to e-cigarettes purchase online has impacted my school and neighborhood. Many students go in school bathrooms and vape and because of that, most of the bathrooms at my school are closed down and people who actually use the bathroom get in trouble for having the scent on them even if they don't use. Please regulate vapes the same as other tobacco products.

Maui
Hilo, Hawaii

To: Senator Joy San Buenaventura, Chair and members of the Committee on Health & Human Services

Senator Jarrett Keohokalole, Chair and members of the Committee on Commerce & Consumer Protection

Re: Support for SB 975

We need to regulate e-cigarettes the same as other tobacco products because e-cigarettes are easily accessible because of the internet and the disposable vapes are cheap and easy to sell to other people.

I have a fear of going to the bathroom at school because most people that go to the bathroom use it as an excuse to vape in there. I sometimes have to go and risk it and go and use the bathroom. I also got in trouble multiple times because I had the scent of the product cuz of people vaping around me.

The easy and cheap access to e-cigarettes endangers my community to the point where some parents don't trust their kids and fear that their kids are being peer pressured to use flavored tobacco products.

Re: Support for SB 975

I support SB 975 because people that vape are becoming addicting at a young age which can lead to serious health issues in the future. They are no better than other tobacco products and should be taxed the same way.

When my grandparents lived in Oahu, my Grandpa used to smoke all the time. He smoked about 3-6 times a day. He never really had a relationship with me because he was half blind, deaf, and couldn't remember all that well. I know that the pipe really messed up his speech too, because he could only make out a couple of words. He smoked because he was trying to let off stress. I felt bad for him because I know that smoking really took over his life and hurt him a lot but I couldn't say anything. He and my Grandma live in the mainland now and he has stopped smoking but the smoking got to him and hurt him a lot. I don't want others to go through that with their family and friends because of vaping.

By taxing vapes the same as other tobacco it would cause fewer kids to use them and make those that vape want to quit.

Senator Joy A. San Buenaventura, Chair and members of the Committee on Health & Human Services

Senator Jarrett Keohokalole, Chair and members of the Committee on Commerce & Consumer Protection

Support SB975

I believe we need to regulate e-cigarettes the same as other tobacco products and tax them at similar rates because it is basically the same product and increasing the tax will make young adults and kids who are not financially independent think twice before buying.

My name is Sydnee Yokota and I am testifying in support of SB975.

Nicotine is an addictive component found in e-cigarette, and using e-cigarettes can be a gateway to using other substances, such as combustible tobacco cigarettes, marijuana, and other illicit drugs. Nicotine can alter a growing individual's brain development and function. The aerosol inhaled from vaping can cause an increased risk of respiratory and cardiovascular problems in our youth. Vaping can also lead to a newly severe medical disease known as e-cigarette or vaping use-associated lung injury (EVALI), dramatically impairing normal lung functioning.

E-cigarettes are found in practically all convenience stores here on the Big Island. They have appealing colors, exciting flavors and low costs that are compelling to buyers and users. However, how e-cigarettes are advertised impacts the community the most; it's always displayed at the front of the store, surrounded by candy, becoming a massive consumer attraction, especially to the youth.

I believe if e-cigarettes are regulated and taxed like other tobacco products, it could potentially cause the youth to not start using them.

Support for SB 975.

My name is Zoe Gacayan, I'm from Paauilo and I'm testifying in support of SB 975. We need to acknowledge that e-cigarettes are the same as any and every other tobacco product because they all do the same thing; kill. Just because they "seem safer" doesn't make the outcome any different. It makes it worse if anything. Increasing the cost could make the youth not buy as much. The current low cost can cause youth to use their money unwisely and cause unhealthy habits, like spending their money on harmful products like e-cigarettes.

Personally, e-cigarettes have been in my life for as long as I can remember. My 3 older sisters all vape. One even works at a vape shop. I tried telling them how harmful it is but then I realized they were not my targeted audience. Youth however could listen. Those are the people I want to talk to and impact. By educating youth on the harms and raising the cost of e-cigarettes we can stop kids from vaping.

During school last year, vaping rates were so high that they decided to close down all bathrooms on our campus. This way no kids could go in there and vape. But this affected everyone. No available bathrooms throughout our whole campus. Cameras were installed outside of each bathroom and hallway, to identify who went where and at what time. We had to ask to use the bathroom electronically. Through E-Hallpass. We have to choose which teacher, which building, which bathroom, then they time how long we've been in there. One person in the bathroom at a time. Each class had a set amount of time

everyone had in the bathroom. Most classes were 5 minutes. So if someone used the bathroom for 4 minutes then that leaves the rest of the class with 1 minute to spare. For the entire class. We need action now to stop this and taxing vapes like other tobacco is one way to help.

I am testifying in support of the intent of SB975.

I believe that we need to regulate e-cigarettes the same as other tobacco products and tax them at similar rates because if the tax makes it expensive, youth hopefully won't be able to afford to have them.

The relatively easy access to e-cigarette purchase online impacts my community because you don't have to be of age to buy it, it is very easy for youth to purchase it for themselves. We need to close the online loophole. You can't buy cigarettes online, why should you be able to buy e-cigarettes that way?

Tobacco has impacted my life because I was not able to meet my great grandparents, they both passed away from lung cancer within a year of each other due to being heavy smokers. I don't want to see this happen to other generations.

I think increasing the cost of e-cigarettes by taxing them like other tobacco would cause more youth to quit and fewer to start.

Support for SB, 975

I, Caleh Carvalho want to see and help end the youth vaping epidemic. Everyday I see kids in my school who are addicted to vaping. At first they started because they liked the candy flavors, some were peer pressured but all of them probably didn't know how addicted they would become to their vape devices. I am the oldest of 4 kids and I want to protect my younger sisters and brother by helping to change the law so they won't be targeted by vaping companies like kids my age.

By treating e-cigarettes the same as other tobacco products it will make it more expensive so fewer kids will start and others may quit.

Thank you for the opportunity to testify.

I support SB 975. We need to regulate e-cigarettes because they do take a toll on the body and it has become overused. Increasing the cost will stop youth from using them. However, how are they even getting them in the first place? We need to better regulate these products so we can decrease the overall use of these items for people across all ages. Ending online sales would help.

I know many people in my life that use tobacco and smoke e-cigarettes with no real reason for doing so. I see the kids learn from watching and end up doing the same thing. One of my uncles has a major cough that hasn't gone away. Is that from smoking electronic cigarettes? The consequences of vaping are starting to be seen in some of the people I know that utilize these products.

The use of e-cigarettes has increased so much and I am now hearing stories of elementary kids bringing and using these devices at school. How are these kids getting these items? Do they see their parents using them and think it is acceptable? Children in my community could be putting their health and body at risk without even knowing the harms of these products .

My name is Lokella Medeiros and I am from Hilo. I am testifying in support of SB975. We need to regulate e-cigarettes the same as other tobacco products to protect the youth and well being of future generations.

My aunty has been a cigarette smoker for over 20 years and now she has a hard time breathing or participating in any physical activities. She has also lost many of her teeth.

Youth have easy access to buying these products and regulating them like other tobacco products will help keep them out of their hands.

I am testifying today in support of SB 975

My name is Noel Nichols and I believe e-cigarettes need to be treated like other tobacco products and taxed like cigarettes. By increasing the cost children will have a harder time coming up with the money to buy them.

They should also not be available online where kids can buy these products then sell them to younger children in the elementary schools.

I see kids vaping all the time like it's candy! It is harmful to them and they are using excessive amounts of nicotine earlier and earlier in life. It is even in the elementary schools! Please help them by making e-cigarettes harder for them to get. :(

Comments:

As a former smoker who smoked for 25 years and a Tobacco Treatment Specialist for the last 20 years I strongly support this bill. Increased costs are the main reason that many people start to think about quitting or not starting in the first place. Due to ecigarettes not being regulated in the same manner as cigarettes we now have an epidemic on our hands. Older individuals who are going to the emergency room due to repercussions from using the ecig , thinking it was safer than smoking. Also another generation which seems to be getting younger and younger each year who are addicted to ecigarettes. Unregulated , unchecked online sales of e-cigarettes need to be addressed. This measure restricts online sales of e-cigarettes directly to consumers- requiring face to face purchases makes it harder for youth to obtain these products via the internet. Licensed tobacco retailers would still be able to receive shipments of products. Taxation, regulation, licensing and permitting , education, and cessation services are components of comprehensive tobacco regulation and a key to lowering the use of tobacco use. Its time for us to start taking these necessary steps for the health of the residents in Hawaii.

This bill is insane. A felony just because someone wants a flavored vape to improve their quality of life or help them quit.
