P.O. BOX 119, HONOLULU, HAWAI'I 96810-0119 Ph: (808) 586-6000 | Fax: (808) 586-1922 ETS.HAWAII.GOV

January 18, 2023

The Honorable Ronald D. Kouchi President of the Senate and Members of the Senate Thirty-First State Legislature State Capitol, Room 409 Honolulu, Hawaii 96813 The Honorable Scott K. Saiki Speaker and Members of the House of Representatives Thirty-First State Legislature State Capitol, Room 431 Honolulu, Hawai'i 96813

Aloha Senate President Kouchi, Speaker Saiki, and Members of the Legislature:

Pursuant to HRS section 27-43.6, which requires the Chief Information Officer to submit applicable independent verification and validation (IV&V) reports to the Legislature within ten days of receiving the report, please find attached the report the Office of Enterprise Technology Services received for the State of Hawai'i, Department of Health, BHA Integrated Case Management System Project.

In accordance with HRS section 93-16, this report may be viewed electronically at http://ets.hawaii.gov (see "Reports").

Sincerely,

Douglas Murdock (an 19, 2023 13:36 HST)

Douglas Murdock Chief Information Officer State of Hawai'i

Hawaii BHA Integrated Case Management System Project – *Phase 3*

Final IV&V Report for the period of

November 1 - November 30, 2022

Final submitted: December 9, 2022

Agenda

Executive Summary

IV&V Findings & Recommendations

Appendices

- A Rating Scales
- B Inputs
- C Project Trends

Executive Summary

The Project resolved the technical deployment issues encountered with R3.27 reported in October and the release went to production on 11/11/2022 with no post-deployment defects. Despite this, the Project Team continues to struggle with deployment issues in the lower-level environments for R3.28 and is working with Microsoft for support.

'Big boulder' functionality schedules continued to slip in November and IV&V is concerned that all functionality will not be implemented by the end of the DDI period.

The resubmission of the IAPDU to extend the DDI period is pending, and this High Issue remains a risk to the project as vendors will be working at risk. IV&V will continue to monitor the status of this impactful item.

Sep	Oct	Nov	Category	IV&V Observations	
R	R	Y	Sprint Planning	The bandwidth of the current technical team remains adequate during November. Consequently, IV&V has reduced the related finding from a high issue to a medium issue and the criticality rating for this category from a Red (high) to Yellow (medium).	
G	G	G	User Story (US) Validation	There are no active findings in the User Story (US) Validation category which remains Green (low criticality) for the November reporting period. IV&V will continue to monitor the US development and validation process in upcoming reporting periods.	
Y	Y	Y	Test Practice Validation	Progress continues to be made with the Tricentis test automation tool. Full implementation of the tool is still targeted for completion with R3.30. This category remains Yellow (medium criticality) for the November reporting period.	
R	R	R	Release / Deployment Planning	yment R3.28 deployment issues in the lower environments which has caused a delay with the	

Executive Summary

Sep	Oct	Nov	Category	IV&V Observations
G	G	G	OJT and KT Sessions	This category remains Green (low criticality) for the November reporting period with no active findings.
G	G	G	Targeted KT	This category remains Green (low criticality) for the November reporting period. IV&V will continue to monitor.
G	G	G	Project Performance Metrics	The R3.27 defect percentage was 16% which is within the target of 20% or less. The velocity for R3.27 of 99 USPs fell significantly short of the estimated 330 USPs. Overall, the cumulative Phase 3 USPs continue to exceed expectations. IV&V will continue to monitor this category.
G	G	G	Organizational Maturity Assessment (OMA)	The next OMA is planned for early January 2023. The criticality rating for the OMA category remains Green (low).
R	R	R	Project Management	The updated INSPIRE IAPDU was not submitted in November as previously planned. As a result, the Project continues to remain at risk. IV&V remains concerned not all functionality will be implemented by the end of the DDI period as previously reported.

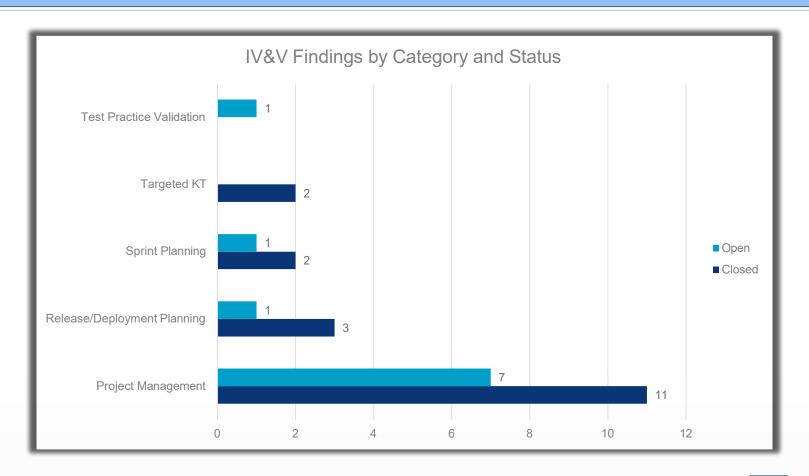

Executive Summary

As of the November 2022 reporting period, there are a total of ten (10) open findings – four High Issues, five Medium Issues, and one Low Issue spread across the Sprint Planning, Release / Deployment Planning, Test Practice Validation, and Project Management assessment areas.

Assessment Categories

Throughout this project, IV&V verifies and validates activities performed in the following process areas:

- Sprint Planning
- User Story Validation
- Test Practice Validation
- Release / Deployment Planning
- On-the-Job Training (OJT) and Knowledge Transfer (KT) Sessions
- Targeted Knowledge Transfer (KT)
- Project Performance Metrics
- Organizational Maturity Assessment
- Project Management

IV&V Findings & Recommendations Sprint Planning

#	Key Findings	Criticality Rating
7	Changed from High Issue to Medium Issue - The BHA Technical Team bandwidth may not be adequate to meet the needs of the project, which could compromise project productivity. Additional RSM team members joined the Project in November to meet the demands of the larger-size release plans. IV&V has reduced the criticality of this issue to a Medium priority.	M

Recommendations	Status
The Project should assess, where possible, if there are responsibilities of the BHA Technical Team that can be reassigned to other project staff.	In progress
The Project should evaluate where process inefficiencies can be addressed and streamlined to possibly free up the BHA Technical Team's availability.	In progress
BHA needs, and should pursue, documentation of the Calculator 3.0 solution.	Completed
The Project should investigate mechanisms of increasing the bandwidth of the BHA Technical Team, either by adding resources through new hires, or vendor contracts.	Completed

IV&V Findings & Recommendations Sprint Planning (cont'd)

Recommen	dations	Status
BHA need solution.	ds, and should pursue, additional Knowledge Transfer sessions on the updated Calculator 3.0	Completed
	ect should consider the formation of a first level resource team to triage/address production defects in nanner, without disrupting new development work.	Completed
	ect should consider procurement of an online training toolset to support OCM and technical efforts to need for in-person training.	Completed

Test Practice Validation

#	Key Findings	Criticality Rating
2	Medium Issue – As a result of regression testing not being consistently performed, production releases are breaking and/or deprecating existing functionality in the production environment. R3.27 was promoted to production on 11/11/2022 after successful completion of regression testing and overcoming deployment challenges with Microsoft. There were no post-live defects reported. The work efforts for automated regression testing continued in November and it is expected that the implementation will be approximately 75% complete for R3.29. Full implementation of the Tricentis tool (90% automation) is expected for R3.30. IV&V will continue to monitor the progress of the Tricentis tool implementation.	M

Recommendations	Status
 Pursuing additional formal training in AzureDevOps for test automation at the earliest possible juncture and commence efforts to automate at least the 2 primary regression test scripts. 	In progress
 IV&V recommends DDD and CAMHD develop a common and consistent approach across divisions for regression testing. 	Completed
Determine if current regression testing timeframes are adequate and if not, add more time to the pre- production regression test efforts for all release deployments.	Completed

Test Practice Validation (cont'd)

Recommendations	Status
Updating the regression test scripts to ensure consistency with system configuration.	Completed
Modifying release schedules to allow for regression testing timeframes.	Completed
 Planning releases by functionality type to avoid unnecessary repetitive work being performed in any given section of the solution. 	Completed
 Performing regression testing after every release, or possibly every other release, or potentially tying regression tests to FSU releases. In addition, consider alternating the DDD and CAMHD scripts every other release. 	Completed
 Modifying regression test scripts to start AFTER case creation, limiting the time it takes to execute. (This recommendation was for a point in time and is no longer valid.) 	Completed
Implementing 'hard' code freeze dates as well as test environment deployment dates to ensure that testing and deployment activities are not rushed.	Completed
Modifying the deployment scripts based on information gained from previous release deployments.	Completed

Test Practice Validation (cont'd)

Recommendations	Status
Consulting with RSM to determine how the 'interim testing processes' can be improved until such time that automated testing is available for repeatable and complete industry standard regression testing.	Completed
 IV&V recommends performing an RCA in collaboration with RSM for the continued concerns with regression testing efforts. 	Completed

Release / Deployment Planning

_	#	Key Findings	Criticality Rating
	18	High Issue - Due to ongoing deployment processes and technical execution issues, the Project may continue to encounter defects and challenges in meeting projected timelines for production and non-production deployments. R3.27 was successfully promoted to production on 11/11/2022 using the 'Update' deployment method after Microsoft assisted BHA by providing needed adjustments. The Project is adopting a new deployment approach recommended by Microsoft due to Microsoft backend changes. Due to the need for continued assistance from Microsoft for the deployment of R3.28 through the lower-level environments and the delay with the R3.27 release, the production deployment date has been delayed. This issue remains at the highest exposure and IV&V will continue to monitor.	B

Recommendations	Status
 Ensure there are adequate and qualified resources to support the current deployment processes. This may require the support from RSM resources to provide assistance and knowledge transfer for some of the more complex deployment components. 	In Progress
As appropriate, consult with RSM on best practices that BHA could employ to support deployment.	In Progress

Release / Deployment Planning (cont'd)

Recommendations	Status
 Request the assistance of the RSM Solution Architect in reviewing and correcting issues associated with consistency of the configurations across environments, ensuring that the test environment is capable of testing ALL functions of any given release without the need for using multiple test environments. 	In Progress
 Request the assistance of the RSM Solution Architect in review of deployment scripts as a double check for accuracy and completeness prior to commencing deployment activities. 	In Progress
The Project Team should consider evaluating potential changes to improve/enhance existing processes and communications to address current release/deployment shortfalls.	In Progress
 IV&V recommends performing an RCA in collaboration with RSM for the continued concerns surrounding environment differences. 	In Progress
• IV&V recommends updating the Project's Configuration Management Plan to address the current needs of the Project. This should include specific checklists geared at ensuring repeatable promotional processes by DOH.	In Progress
 Look at implementing 'hard' code freeze dates as well as test environment deployment dates to ensure that testing and deployment activities are not rushed. 	Completed
Ensure an operational and fully functional test environment is available to effectively conduct end-to-end regression testing prior to deploying a release to production.	Completed
 Work in collaboration with RSM to establish a transition plan for DOH to assume all deployment activities to ensure complete ownership of these processes. This should assist with consistency in approach and execution going forward. 	Completed

Release / Deployment Planning (cont'd)

Recommendations	Status
 Develop a plan to institutionalize the execution of "Smoke Testing" for promotions to non-production and production environments. This will help to ensure that all components needed to test have been properly deployed prior to the actual execution of test activities. 	Completed
• Due to an error prone process of 'cherry picking' what is and what is not ready for deployment, IV&V recommends that DOH and RSM collaborate to determine an improved manner for managing DOH environments. (As a result of how the current development environment is being managed, 'cherry picking' components to deploy will continue to occur. This recommendation is closed.)	Closed

Project Management

#	Key Findings	Criticality Rating
14	Medium Issue - Due to multiple quality concerns, the Project may continue to face impactful system defects. R3.27 was promoted to production on 11/11/2022. There were no post-live defects reported, which is very positive. The Project is currently experiencing a deployment timeout issue due to the size of the solution being deployed, which is currently affecting lower-level environment promotions. The challenges in this area continue to have a ripple effect on upcoming release schedules. IV&V will continue to monitor this finding and its associated effects on the project.	M

Recommendations	Status
Evaluate existing project staff skills and experience level to ensure they meet BHA support requirements.	In Progress
 Perform CAMHD revenue neutrality fiscal balance testing on a quarterly basis to ensure revenues are as expected. 	In Progress
Assign dedicated resources to provide oversight of CAMHD Fiscal Processes.	In Progress
Monitor implemented IV&V recommendations for effectiveness.	In Progress

Recommendations	Status
 IV&V recommends performing an RCA in collaboration with RSM after all future release deployments for continual quality improvement. 	Completed
BHA and RSM to collaborate on the necessary revisions to the submitted design deliverables to increase level of detail and quality.	Completed
 Perform typical project testing including System Integration, User Acceptance, Performance, and Regression Testing. 	Completed
 Dedicate sufficient time in between releases for BHA and RSM to execute/implement RCA correction actions to reduce the volume of unplanned rework. 	Completed

Project Management (cont'd)

;	#	Key Findings	Criticality Rating
1	12	Medium Issue – PII/PHI data in non-production environments. No substantive changes were observed during November. The Security Assessment is still pending approval from the ASO, which has been the status for six (6) months. The delay with this approval may impact BHA's ability to obtain certification from CMS for the INSPIRE solution. RSM is working to address the PII/PHI issue as part of the scope for R3.29. However, the current R3.29 backlog exceeds capacity and requires grooming based on current priorities. IV&V will continue to monitor this medium criticality issue.	M
Re	econ	nmendations	Status
•	IV&	V recommends BHA escalate the pending Security Assessment approval if possible.	In Progress
•		V recommends DOH consider limiting the volume of environments with PII/PHI data and access essary to support development work, which should help minimize this risk.	Open
•		V recommends if production data is necessary in any non-production environment that DOH establishes a for effectively managing the security of the PII/PHI data, including the potential masking of data.	In Progress
•	IV&	V recommends that DOH mitigates this finding by minimizing and/or masking PHI/PII data in designated	In Progress

non-production environments.

#	Key Findings	Criticality Rating
21	Medium Issue – Unplanned rework may have an impact on delivering DDI functionality by the end of the DDI period. R3.27 was deployed to production on 11/11/2022 with no post-production defects. The related defect percentage for this release was 16% which is well within the target of 20%. IV&V will continue to monitor this medium criticality finding.	M

Recommendations	Status
Reduce the amount of unplanned rework by continuing to focus on quality improvement measures.	In Progress
Strive for defect performance metric not to exceed 20% of all user story points in any given release.	In Progress

#	Key Findings	Criticality Rating
22	High Issue - The project schedules for 'big boulder' functionality development are slipping. The Project continued to re-align the release targets for 'big boulder' functionality in November. Several items previously assigned to R3.28 were deferred to R3.29, and the current backlog for R3.29 exceeds resource capacity and will require additional grooming for current priorities. The target velocity for the combined R3.27 and R3.28 was estimated at 769 USPs. R3.27 promoted 99 USPs to production and R3.28 is expected to have 113 USPs when promoted to production. This results in only 28% delivery of target velocity for combined R3.27 and R3.28 releases. Per IV&V's observation, the Project is at risk for completing all planned big boulder priorities prior to the end of the DDI period. IV&V will continue to monitor this high-exposure project issue.	(1)

Recommendations	Status
 Extend the current DDI timeframe to allow for the completion of 'big boulder' interfaces functionality development. 	In Progress
BHA to add more resources to support the development of "big boulder' interfaces functionality.	Completed

#	Key Findings	Criticality Rating
26	Low Issue - The inability for BHA staff to work remotely is decreasing productivity and causing morale issues amongst team members. While there have been no official announcements made, It is anticipated that a revised telework policy is being entertained by DOH leadership, wherein staff would be permitted to telework 2-3 days a week. IV&V will continue to monitor this low exposure project issue.	L

Recommendations	Status
 IV&V recommends that DOH consider granting remote work to help retain existing staff and to attract new candidates for open positions. 	In Progress

#	Key Findings	Criticality Rating
27	High Issue - The current DDI period expires at the end of October 2022 which will require RSM to transition the D365 solution to the State prior to contract end. The revised IAPDU has still not been submitted to CMS. It is imperative the IAPDU be resubmitted and approved as soon as possible, as the project is at risk.	B

Recommendations	Status
DHS to reconcile current claims invoicing discrepancies.	In Progress
DHS to submit IAPDU using the newly released template as soon as possible.	In Progress

#	Key Findings	Criticality Rating
28	High Issue - The DDD Product Owner resigned her position in September and transitioned off the project in early October. The previous DDD Product Owner tasks and activities have been transitioned and temporarily re-assigned to existing team members. The new DDD Product Owner recruitment effort continued in November and candidates are being reviewed and assessed. IV&V will continue to monitor this high exposure project issue.	(

Recommendations	Status
 IV&V recommends DDD seek (internal/external) multiple staff to replace the DDD Product Owner for each role served. 	In Progress
 IV&V recommends DDD consider soliciting contracted staff to fill the immediate gaps with the DDD Product Owner's departure. 	In Progress
 IV&V recommends a formal transition plan be fully defined and executed prior to the DDD Product Owner departure. 	Completed

Project Performance Metrics

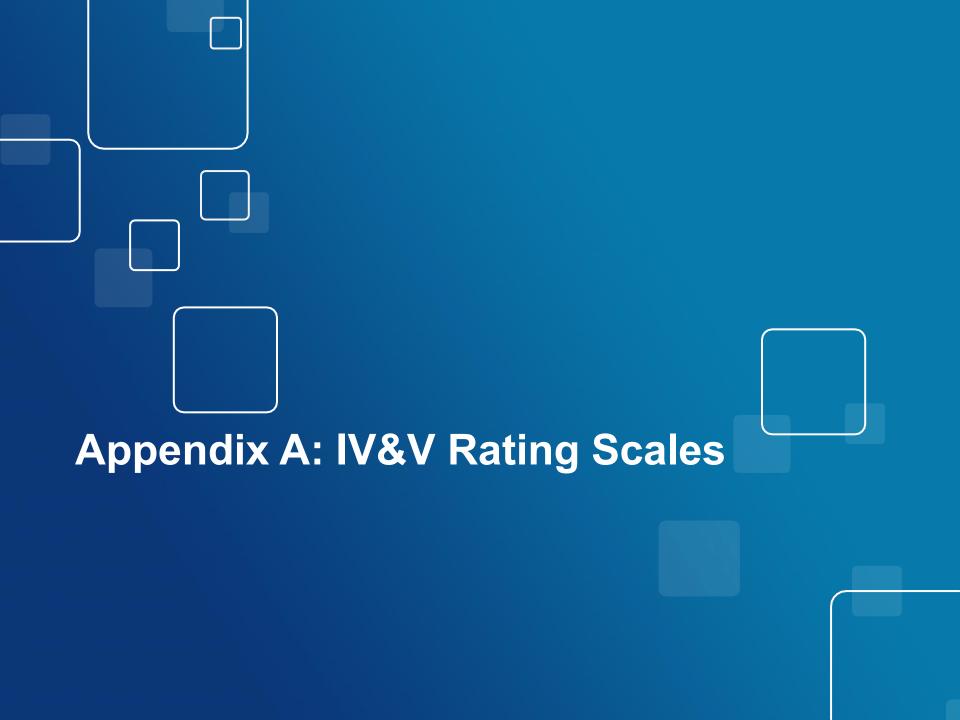

Metric	Description	IV&V Observations	IV&V Updates
Velocity	 Review and validate the velocity data as reported by the project Verify the project is on pace to hit the total target number of US/USP for Phase 3 	November – Available velocity was estimated at 330 user story points for R3.27, and a total of 99 USPs were promoted to production on 11/11/2022. Overall, cumulative Phase 3 targeted USP's through R3.27 was planned for 2,287 and the actual USP count is now 2,978.77. This continues to exceed expectations for volume of work performed.	IV&V recommends BHA to determine how the lower-than-expected R3.27 velocity impacts downstream releases.

Project Performance Metrics (cont'd.)

Metric	Description	IV&V Observations	IV&V Updates
Defect Metrics	Understand and track the following: • Defects by category (bug fixes) • US Points assigned to defects in a release vs US Points assigned to planned US in a release	 November - R3.27 was deployed to production on 11/11/2022. A total of 99 USP's were promoted to production. 84% of the total USP's were associated with planned user stories and requests. 16% of the total USP's were associated with defects that were either encountered during the release effort or pulled from the backlog. The defect ratio for November met the target of 20% or less of the total USPs in any given release. 	N/A

Appendix AIV&V Rating Scales

This appendix provides the details of each finding and recommendation identified by IV&V. Project stakeholders are encouraged to review the findings and recommendations log details as needed.

- See Findings and Recommendations Log (provided under separate cover)
- IV&V Assessment Category Rating Definitions

The assessment category is under control and the current scope can be delivered within the current schedule.

The assessment category's risks and issues have been identified, and mitigation activities are effective. The overall impact of risk and issues is minimal.

The assessment category is proceeding according to plan (< 30 days late).

The assessment category is under control but also actively addressing resource, schedule or scope challenges that have arisen. There is a clear plan to get back on track.

The assessment category's risk and/or issues have been identified, and further mitigation is required to facilitate forward progress. The known impact of potential risks and known issues are likely to jeopardize the assessment category. Schedule issues are emerging (> 30 days but < 60 days late).

Project Leadership attention is required to ensure the assessment category is under control.

The assessment category is not under control as there are serious problems with resources, schedule, or scope. A plan to get back on track is needed.

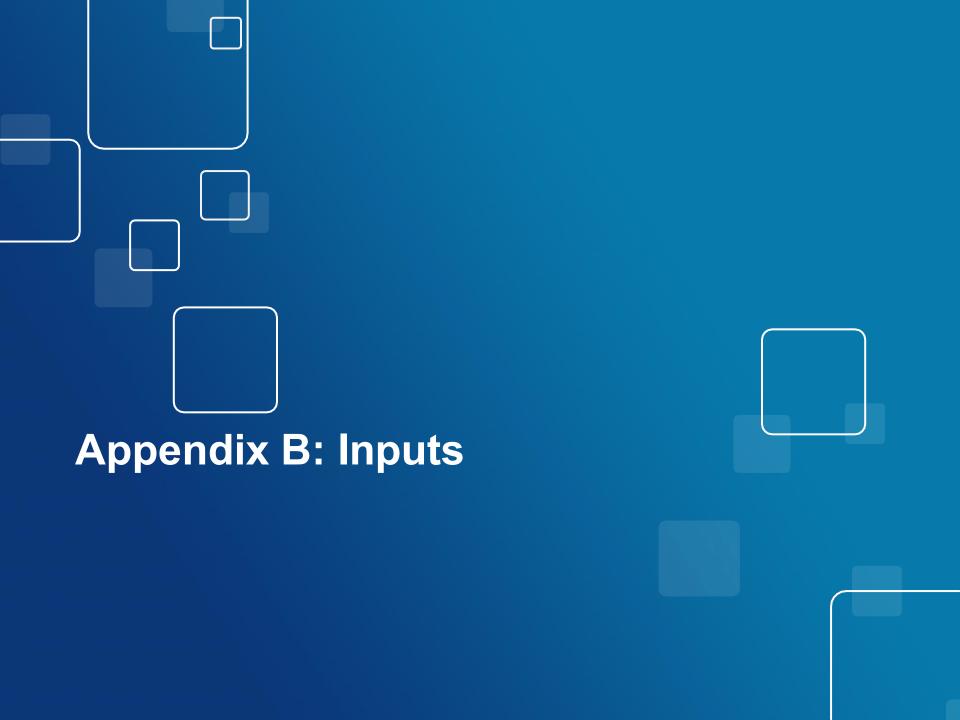

The assessment category's risks and issues pose significant challenges and require immediate mitigation and/or escalation. The project's ability to complete critical tasks and/or meet the project's objectives is compromised and is preventing the project from progressing forward.

Significant schedule issues exist (> 60 days late). Milestone and task completion dates will need to be re-planned. Executive management and/or project sponsorship attention is required to bring the assessment category under control.

Appendix A

Finding Criticality Ratings

Criticality Rating	Definition
(1)	A high rating is assigned if there is a possibility of substantial impact to product quality, scope, cost, or schedule. A major disruption is likely, and the consequences would be unacceptable. A different approach is required. Mitigation strategies should be evaluated and acted upon immediately.
M	A medium rating is assigned if there is a possibility of moderate impact to product quality, scope, cost, or schedule. Some disruption is likely, and a different approach may be required. Mitigation strategies should be implemented as soon as feasible.
O	A low rating is assigned if there is a possibility of slight impact to product quality, scope, cost, or schedule. Minimal disruption is likely, and some oversight is most likely needed to ensure that the risk remains low. Mitigation strategies should be considered for implementation when possible.

Appendix B Inputs

This appendix identifies the artifacts and activities that serve as the basis for the IV&V observations.

Meetings attended during the November 2022 reporting period:

- Daily Scrum Meetings (selected)
- 2. Twice Weekly RSM Issues Meeting
- 3. Weekly BHA-ITS Project Status Meeting
- 4. Bi-Weekly Check-in: CAMHD
- 5. Bi-Weekly Check-in: DDD
- 6. IV&V Draft IV&V Status Review Meeting with DOH
- 7. IV&V Draft IV&V Status Review Meeting with RSM and DOH

Eclipse IV&V® Base Standards and Checklists

Artifacts reviewed during the November 2022 reporting period:

- Daily Scrum Notes (selected)
- 2. Twice Weekly Issues Meeting Notes (selected)

ID	Date Identif Finding	Finding Statement	Supporting Analysis	PCG Recommendation	Finding Update	Process Area	Finding Type	Priority	Status	Risk Owner	Closure Reason
1.00	Detailed investigation into the project's sprint planning	IV&V is currently investigating the following topics as they relate to Sprint	While having a high level roadmap is good, the project should be able to identify what feature enhancements will be targeted for each planned release. This roadmap will help the project manage scope and productivity. Relatedly, the "definition done" is an important artifact to ensure that the project is successful. Otherwise, the project will struggle to prioritize requests/enhancements and manage scope.	As much as possible, the project should identify what feature enhancements will be targeted for each Release and should clearly map out the roadmap out through the last Phase 3 release in September 2020.Additionally, the project should clearly define "Done" to ensure the project team is working towards the same goal and increase opportunities for success. Having a clear "definition of done" will help provide the project with guidance on how to stay within scope.	01/31/2020 - IV&V is closing this concern, and will be tracking items related to Definition of Done, roadmap, resourcing, and backlog grooming in new, separate findings.	Sprint Planning	Preliminary Concern	N/A	Closed	Ramesh, Vijaya (PCG)	Due to multiple new items being tracked at a more granular level, this item has been closed.
