
HOUSE CONCURRENT RESOLUTION

REQUESTING THE DEPARTMENT OF LAND AND NATURAL RESOURCES TO WORK WITH THE NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION AND OTHER EXPERTS TO CONDUCT A STUDY ON THE POPULATION STATUS OF CORAL REEF HERBIVORES AROUND THE ISLAND OF OAHU AND DEVELOP EFFECTIVE POLICIES FOR SUBSTANTIALLY INCREASING THOSE POPULATIONS WITHIN A DECADE.

1 WHEREAS, coral reefs provide extremely valuable ecosystem
2 goods and services for the people of Hawaii, including habitats
3 for nearshore fisheries; opportunities for various tourism and
4 recreational activities; and coastal protection from waves,
5 storms, and erosion as sea levels rise; and

6
7 WHEREAS, reefs are also fundamental to the fabric of local
8 communities, providing a source of food, materials, and
9 traditional activities; and

10
11 WHEREAS, Hawaii's coral reefs generate over \$800 million
12 per year in gross revenues, and the estimated total economic
13 value of coral reefs in the main Hawaiian Islands exceeds \$33
14 billion; and

15
16 WHEREAS, many reefs around the island of Oahu have been
17 degraded from poor land use practices and are dominated by dead
18 coral covered by seaweeds; and

19
20 WHEREAS, the maintenance and recovery of coral reefs
21 require abundant and diverse herbivores, which are fishes that
22 eat seaweeds, such as parrotfishes (uhu), surgeonfishes (e.g.,
23 kala, kole, manini), and chubs (nenu); and

24
25 WHEREAS, parrotfishes are also known producers of sand that
26 replenishes beaches; and

27

1 WHEREAS, abundant and diverse herbivores are known to keep
2 reef surfaces clean so that corals can flourish; and

3
4 WHEREAS, the depletion of herbivores results in reefs being
5 dominated by seaweeds rather than corals, thus reducing fishing
6 and other recreational, commercial, and traditional cultural
7 opportunities; and

8
9 WHEREAS, the population of coral reef herbivores around
10 Oahu is the lowest in the State, existing at below five percent
11 of its potential; and

12
13 WHEREAS, ever-increasing ocean warming has caused coral
14 bleaching events that kill corals and are predicted to occur
15 every year in Hawaii before the year 2040; and

16
17 WHEREAS, reefs that bleach are known to recover more
18 quickly and fully when herbivores exist in abundance; and

19
20 WHEREAS, existing statewide fishing rules concerning
21 herbivores may be insufficient to replenish herbivore
22 populations around Oahu before coral bleaching becomes an annual
23 event; now, therefore,

24
25 BE IT RESOLVED by the House of Representatives of the
26 Thirty-second Legislature of the State of Hawaii, Regular
27 Session of 2024, the Senate concurring, that the Department of
28 Land and Natural Resources is requested to:

- 29
30 (1) Work with the National Oceanic and Atmospheric
31 Administration Pacific Islands Fisheries Science
32 Center and other experts to conduct a study on the
33 population status of individual species and families
34 of coral reef herbivores around Oahu, prioritizing uhu
35 and kala; and
36
37 (2) Conduct an analysis of policies and strategies to
38 substantially increase the populations of coral reef
39 herbivores around Oahu within a decade; and
40

41 BE IT FURTHER RESOLVED that the Department of Land and
42 Natural Resources is requested to submit a report of its

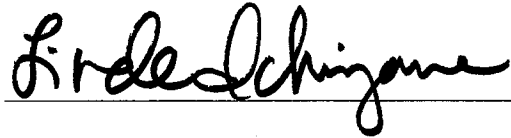

H.C.R. NO. 83

1 findings and recommendations, including any proposed
2 legislation, to the Legislature no later than December 1, 2024;
3 and

4
5 BE IT FURTHER RESOLVED that certified copies of this
6 Concurrent Resolution be transmitted to the Chairperson of the
7 Board of Land and Natural Resources and Director of the Pacific
8 Islands Fisheries Science Center.
