RESEARCH ACTIVITIES

Physiologic Considerations and Perceived Exertion for Face Mask Wear August 2021 – January 2022

During Moderate to Vigorous Activity in School-Aged Children (lead PI)

IRB approved prospective study of 50 patients with primary objective of learning if there are significant changes in physiological variables of heart rate, temperature, oxygen saturation and blood pressure in children participating in moderate to vigorous physical activity when using a face mask. Secondary Objective: to determine if patients' perceived exertion during moderate to vigorous physical activity with use of a face mask coincides with their objective physiologic measures. Study closed due to recruitment confines related to pandemic precautions.

Capstone project: Case Report of Post-Operative Physical Therapy Intervention for Treatment of Congenital Bilateral Fibular Hemimelia Using the Taylor Spatial Frame

BOLLD study: Safety & Efficacy of Botox Injection for reducing post-operative pain and Improving Quality of Life in Lower Limb Lengthening and Deformity Correction

2004-2006

A randomized, multi-centered, double-blinded, parallel-group, placebo-controlled, phase III trial in 150 patients with Botox. Patients were recruited from 4 Shriners Hospitals and 2 pediatric hospitals in the United States and Canada.

Responsibility within project: data collection, team collaboration

Master's Thesis: The effect of PREs upon terminal swing in gait of individuals with spastic diplegic cerebral palsy

Pacific University, 1997. Co-Authors: Bridget Corsetti and Kevin Riddle

Awards

The DAISY Award for Extraordinary patient Care Nominee

May 2018

Professional Memberships

APTA: American Physical Therapy Association; Hawaii Chapter member; Pediatric Section member
