TESTIMONY TO THE HOUSE COMMITTEE ON FINANCE

House Bill 2387 House Draft 1 – Relating to Worker's Compensation Medical Benefits

The Disability and Communication Access Board (DCAB) supports House Bill 2387 House Draft 1 – Relating to Worker's Compensation Medical Benefits. This bill expands workers' compensation medical benefits for firefighters to include coverage for adenocarcinoma or mesothelioma of the respiratory system; cancer of the buccal cavity, cervix, colon, esophagus, ovary, pharynx, skin, female reproductive organs, including the uterus, endometrium, and fallopian tubes, and thyroid; and malignant melanoma. It specifies that an employer may deny medical benefits under workers' compensation law only if they prove that the cancer or disease was not associated with firefighting duties. Effective 7/1/3000.

The physical and environmental exposures from firefighting duties may be the cause of firefighters' cancer diagnosis. The cancers listed in this bill may have long latency periods before diagnosis. Given these risks, it is essential to ensure that those who develop cancer due to their occupational exposure receive appropriate workers' compensation medical benefits.

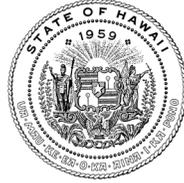

The Americans with Disabilities Act protects individuals with cancer and by expanding cancer or disease coverage for firefighters' workers' compensation medical benefits ensures access to the medical care, services, and supplies that they need.

This bill supports our firefighters who risk their lives every day to protect our communities.

Thank you for the opportunity to testify.

Respectfully submitted,

KRISTINE PAGANO
Acting Executive Director

Department of Labor and Industrial Relations (DLIR)

Re: H.B. 2387 H.D.1 RELATING TO WORKERS' COMPENSATION
MEDICAL BENEFITS

I. OVERVIEW OF PROPOSED LEGISLATION

The **DLIR supports** this measure to ensure first responders receive timely and appropriate medical treatment associated with firefighting duties.

HB2387 HD1 proposes to amend HRS §386-21.9 by:

- Expanding workers' compensation medical benefits for firefighters as defined in §386-21 to include coverage for adenocarcinoma or mesothelioma of the respiratory system; cancer of the buccal cavity, cervix, colon, esophagus, ovary, pharynx, skin, female reproductive organs, including the uterus, endometrium, and fallopian tubes, and thyroid; and malignant melanoma.
- Specifying that an employer may prove that the cancer or disease was not associated with the firefighting duties to deny medical benefits under workers' compensation law.

II. CURRENT LAW

§386-21.9 defines medical care, services, and supplies for firefighters suffering from cancer. If a claim for leukemia, multiple myeloma, non-Hodgkin lymphoma, or cancer of the lung, brain, stomach, esophagus, intestines, rectum, kidney, bladder, prostate, or testes filed by an employee with five or more years of service as a firefighter is accepted or determined to be compensable, §386-21 shall remain applicable; provided that the employer shall be liable for medical care, services and supplies for a minimum of one hundred ten per cent, and not to exceed one hundred fifty per

cent of fees prescribed in the Medicare Resource Based Relative Value Scale applicable to Hawaii as prepared by the United States Department of Health and Human Services.

§386-21 defines medical care, services, and supplies and provides that immediately after a work injury sustained by an employee and so long as reasonably needed the employer shall furnish to the employee all medical care, services, and supplies as the nature of the injury requires.

§386-73.5 states the DLIR Director has original jurisdiction over all controversies and disputes arising out of workers' compensation.

§386-85 states the presumption of employment and compensation for a work-covered work injury in the absence of substantial evidence to the contrary.

III. COMMENTS ON THE HOUSE BILL

The Department fully supports this measure to ensure that first responders receive timely and appropriate medical treatment to include coverage for adenocarcinoma or mesothelioma of the respiratory system; cancer of the buccal cavity, cervix, colon, esophagus, ovary, pharynx, skin, female reproductive organs, including the uterus, endometrium, and fallopian tubes, and thyroid; and malignant melanoma when it is determined that said cancer or disease was associated with firefighting duties.

HOUSE OF REPRESENTATIVES
THE THIRTY-FOURTH LEGISLATURE
REGULAR SESSION OF 2026

February 26, 2026

Committee on Finance

Testimony by
Hawaii Fire Fighters Association

H.B. 2387 H.D. 1 – RELATING TO WORKERS’ COMPENSATION MEDICAL BENEFITS LAB,
FIN

Dear Chair Todd, Vice Chair Takenouchi and Members of the committee,

The Hawaii Fire Fighters Association (HFFA), Local 1463, IAFF, AFL-CIO represents more than 2,000 active-duty and 1,000 retired professional fire fighters throughout the State of Hawaii. The HFFA, on behalf of all our members, strongly supports H.B. 2387, which expands medical benefits for firefighters under workers' compensation to include additional types of cancers.

“The National Institute for Occupational Safety and Health (NIOSH) study identified that fire fighters have a 9% greater chance of being diagnosed with cancer and a 14% greater chance of dying from cancer than the general U.S. population.” Fire fighters are exposed to carcinogenic agents from fire combustion products that can be inhaled, ingested, or absorbed through dermal exposure, fire fighting foam, diesel exhaust from fire apparatus, and even the turnouts, which provide thermal stability, contain PFAS. The Grace LeMasters’ study found a direct correlation occupational exposure and the increased risk for cancer.

H.B. 2387 H.D. 1 provides the workers’ compensation coverage for our fire fighters diagnosed and require cancer treatment.

Thank you for the opportunity to testify and we ask the Committee to pass H.B. 2387 H.D.1.

HB-2387-HD-1

Comments:

My name is Jay Fujita, I am a 26 year veteran of the Maui Fire and Public Safety Department and I am in support of HB2387. I subscribe to the IAFF LODD email and get notified whenever a Line of Duty Death occurs. 9 out of 10 LODD has been the result of Occupational Cancer. Occupational Cancer followed by suicide are the top two leading causes of LODD. These cancers have been proven to be from exposures that occurred while responding to fires. Fire fighters should not have to fight for medical coverage while they fight for the very lives.

Another topic that will need to be looked at is, these exposures do not go away once a Fire Fighter retires. A diagnosis of a cancer in retirement is even more of a fight. Set income, older in age, and no support from the employer with which the exposures occurred just make the fight that much more challenging, if not impossible. Please pass this Bill and any further Bill. Please encourage all who are in power to move this forward and help us Fire Fighters who have helped thousands others.
