# SENATE CONCURRENT RESOLUTION

REQUESTING THE DEPARTMENT OF HEALTH TO CONDUCT A STUDY ON THE COSTS AND BENEFITS OF REQUIRING WATER SUPPLIERS IN THE STATE TO ADJUST FLUORIDE LEVELS IN THEIR WATER SYSTEMS TO MEET THE OPTIMAL FLUORIDE LEVEL FOR COMMUNITY WATER FLUORIDATION AS ESTABLISHED BY THE UNITED STATES DEPARTMENT OF HEALTH AND HUMAN SERVICES.

1           WHEREAS, drinking fluoridated water is a safe and cost-  
2 effective way to reduce cavities and to help protect against  
3 tooth decay; and

4  
5           WHEREAS, drinking water with the optimal fluoride  
6 concentration helps keep teeth strong and reduces tooth decay by  
7 approximately twenty-five percent; and

8  
9           WHEREAS, most states and many countries, including  
10 Australia, Canada, New Zealand, and Singapore, require  
11 fluoridation, or the addition of fluoride, in their public water  
12 systems; and

13  
14           WHEREAS, in the State, only military bases currently add  
15 fluoride to their water supplies, meaning that approximately  
16 eighty-nine percent of the State's residents lack access to the  
17 benefits of fluoridated drinking water; and

18  
19           WHEREAS, this lack of community water fluoridation  
20 contributes to the State's high prevalence of tooth decay, which  
21 affects many adults and approximately seventy percent of the  
22 State's children; and

23  
24           WHEREAS, many of the State's residents receive minimal to  
25 no routine dental care; and

26  
27           WHEREAS, many residents do not have dental insurance, and  
28 Medicaid managed care plans cover dental services for children  
29 but not for adults; and
